I, and my fellow PCTA's, have been doing that for years here on this newsgroup, Fidonet, and in the editorial pages of the ham magazines. Now, it's your turn. I axed YOU to "prove" that "code testing serves no real purpose today." So do it. Provide your "proof," make it convincing, and do it right now -- or you will have just provided "proof" that you don't know what you're talking about!

>The trends are moving towards the elimination of code testing. If you
>have a good reason to change that, now is certainly the time to speak up.

I have "spoken up" about this -- at great length.

>Nothing you've said so far has been able to change those trends.

That's because we have a dumbed-down culture, and one voice cannot change an entire culture. Six years ago, I encouraged Nancy Kott and the FISTS to organize a campaign of "speaking up" which could have easily changed the outcome of the Restructuring NPRM of 1998. That didn't happen. Now, too little too late, she is making a last ditch effort. Well, when the "Zero WPM" NPRM comes out, I will provide my comments, as I did in '98. However, I can't do everyone else's reading, writing, and thinking for them. I had to do that for my alleged "bosses" in the Air Force, and I've decided I'm no longer going to give away my intellectual effort for anyone else to claim as their own. All of my fellow FISTS will have to come up with their own arguments to keep code testing, if that's what they want to do.

>Endlessly
>repeating what you've already said hasn't either. So, perhaps you should
>think of something new to say.

If I am speaking the truth, which I am, then repeating that truth is just as valid as the repetitive, boring, and obnoxious droning of the NCTA.

So, Brian -- are you going to defend your statement, or not?

Hans,

Do you think insulated 10 gauge ladder line from a 3 KW tuner plugged into the electric stove outlet might make a good antenna? For experimentation only, of course :)

From http://www.arrl.org/news/stories/2003/08/21/4/?nc=1

"The League also noted that comments in the proceeding so far have
been silent on the interference susceptibility of BPL to ham radio
signal ingress. The League predicted that even as little as 250 mW of
signal induced into overhead power lines some 100 feet from an amateur
antenna could degrade a BPL system or render it inoperative."

I realize that this is not the statement about actual tests run by the
BPL people which you'd like to see, they haven't published *any* test
results at all, but the League technical guys are pretty sharp and I
doubt they'd make a statement like this if that didn't have a good

basis for making it.

Heh. Yeah, the recent grid debacle is not setting a very good stage
for a huggy kissy relationship between the BPL types and *anybody*
else including the FCC. I've seen some economic analyses of BPL and
from the standpoint of an investor BPL is a big go-nowhere dud.

> > Far beyond the question of hams interfering with BPL comes the much

> far quiter now than they were 30 years ago.

That's quite true. But we can't hear HF listeners and we can't
normally tune some modes but they're out there and apparently in
profusion. We almost didn't get any 60M band at all because certain
feds didn't want hams on "their HF frequencies". I dunno who they are,
those freqs appear dead when ya tune around. But they're there. FBI,
CIA, NSA, FCC, the military?

> Of course, I've got my own

You'll note, Larry, that by your own post of the words from Riley, he's
quite capable of something you are not: being a gentleman and democratic
about his--"HIS"--personal opinion. Anyone is entitled to their opinion,
Larry, even you. However, you'll also note that Riley never went beyond
making a statement on his own personal opinion.

>
> Kim's act of hubris, in making the attempt to get a well-known authority

>

Again, Riley would never request that someone desist anything; while he is offering his own personal opinions. He likely would caution that you are as destructive, if not more than, as I to the ARS. My callsign, in my opinion, is not destructive to the ARS. My opinion is as valid as Riley's, yours, or anyone else's.

> >
> >So, since Kim was willing to

> to be tolerated.
>
> 73 de Larry, K3LT
>

Good grief, Larry. Your "behavior" is despicable. The only message you send is one of idiocy.

And, I seem to recall that I told you when you had something intelligent and logical to say that you'd see me responding to you. I've seen nothing intelligent and logical yet--and I've given you every opportunity. So, you'll see nothing from me again until you have something intelligent and logical. Every time that is requested, you act like a fly on shit with the callsign issue. Not intellectual, not logical.

You can't do it, can you?

> less the code/no-code discussions.
>

Yes, and that is precisely why our few windows of visibility here on the Internet are so very important. Very few non-hams listen to us on the air, but millions can potentially see what we do on the Internet.

How ham behave off the air, in public and online largely determine how we are viewed by the general public. Eventually, our public behavior and reputation has its affect on what happens in congress and at the FCC.

Discussions like what are seen in this newsgroup should not really be occuring in a newsgroup at all. - They should be moved on to a mailing list. That would in no way limit the discussion or the enjoyment of its participants, but would take it out of the public eye.

There is no advantage to airing our dirty linen this way, particularly when it is not necessary. This discussion was moved once before, and should be moved again for the same reason. It is ugly and obnoxious, reflecting poorly upon the hobby.

I do not consider our obligation as hams to abide by communications law to be "unfortunate"... It strikes me as being essential and beneficial, in no way unfortunate because without that obligation we would quickly go the way of CB, as you say.

People who work to undermine these rules and our obligation to follow them as hams are directly attacking the hobby, attempting to undercut the basis of our legitimacy. Most often, these attacks are based on a stated desire to obtain a "freebee" at other's expense.

There are probably some tests out there on that.

What is the mode in which solar storms interfere with or knock out
power transmission? Is is some kind of massive DC current thing?

Exactly! And this is from the guy that said he took the Extra exam on a lark!

Here are the particulars:

1. without studying
2. on a $250 bet from two "cb-plussers"
3. completed in under 8 minutes
drum roll
4. scored 100%

And what bugs Brian the most, is after all this time he still cant pass the
EXTRA.
But what do expect, it took his great Leader Karl, who is the Leader of NCI
well over a year to pass it.
A bunch of Dummies who cant even pass a simple Memorization Test, where no
real knowledge of the subject material is required.

I don`t know the details, but here in Europe several pilot projects
were basically stopped and several larger companies got out of that
technology again, after trying to hype it for several years.

I do not know if this is due to unreliability or due to other factors,
but it *seems* to have worked better in the lab than in the real world.
If enough problems make it too unreliable and/or expensive, this might
be the easiest way out.

There *are* some companies still trying to bring this to market though
(my local utility does).

> Show PROOF of your mighty military "communications," big mouth.

This "big mouth" doesn't need to recite his previous service over
and over in a newsgroup forum in order to sate his ego, Lennie.

That's YOUR schtick.

> You TALK a big story without mentioning ANY details.

Naaah....No big story, Lennie. I did it, it's in my SRB, and
that's all that counts.

The RRAP back channel folks can ask me if they care to, and I'll
tell them, but you're not invited. You won't play nice in e mail
anyway.

> You haven't named a single one of the "hostile actions" you claim you
> were in.

Because it's irrelevent to this forum. I already invited sonme
to e mail me direct. Brian took me up on some of it.

> >> It's painfully obvious, Brian. Steamy hates me. I served in the US Army

Nope...I hate LIARS. That would be you.

> My military service is archived at NARA. Not only that, I have witnesses
> still alive who were at the same Army radio station I served when I was
> there. No lies.

Except for your attempts to embellish your "service record" in
this forum at the expense of Army KIA's and your assertion of "working

DX" as an Army radio clerk.

I am SO (un)impressed.

> You HATE someone else being successful in anything so much that it
> makes you almost violent. That's a bad mental symptom which needs
> treatment.

Nope. I just love making a fool out of your with your own words.
Actually, it's very sad to see someone who had something once spend
what ought to be his "mentoring years" being so childish and idiotic.

> >> Steamy never did any primary communications while in the USMC. Naturally
> >> he resents that anyone else did.
> >
> > Sorry. Incorrect.
>
> It may be "incorrect" but it is more likely quite CORRECT.

If it makes you sleep better at night, Lennie, you go right on
thinking that.

> You've NEVER stated in any detail what you actually DID in the USMC
> insofar as radio communications. You conveniently gloss over any
> details. Anyone who really liked their past work will remember details of
> it and "talk shop" about it. You never do.

Because what I did in the USMC is, for the most part, irrelevent
in this forum, Lennie.

Unlike you, who MUST reassert his king-of-the-hill personna in
order to have any self respect, I don't need or enjoy such retellings
of my service career for sporting purposes.

If it makes YOU happy, Lennie...go right ahead...Not that any of
the 20 people who have told you that they are sick of hearing it over
and over has deterred you at all...

> All you talk about is some general phrases (copyable from any little PR
> booklet) about "warrior skills" and honor and glory...NO DETAILS.
>
> All those generalities and NO DETAILS...sure marks of a bluffer, a con
> man, trying a selling job on those with no experience in some area.
>
> In short, YOU LIE.

Nope. Sorry.

> Then you try to say others "lie" when they give details, provide references
> and have documentation to prove what they say.

refuteing whatever it was you were trying to make a point about.

> >> Steamy can't handle real truth.
> >
> > Sure I can. You are liar, an antagonist, and a creep.
>
> Antagonist, yes. Liar no.

Antagonist yes, Liar yes. As much as I know you hate hearing it,
"It's in Google".

> I've provided details, references, even names of still-living witnesses as
> proof of what I've done.
>
> You've never tried to confirm anything, have you?

Hmmmmm...yep....ya wanna go back over your sterling performances
in Pennsylvania?

> You've rejected a scan of my first First Class Radiotelephone (Commercial)
> license, not once but four times in e-mail.

And you sent me "erroneous" e mails. You admitted in this forum
you "erred". You USED an offer of the forwarding of the license, but
you used it as an opportunity for a practical joke.

You won't "use" me again, Lennie. The really SILLY thing is you
did it to several people, ergo creating a pool of folks able to
corroborate MY version of events.

Pretty danged stupid, Lennie.

> You just can't tolerate TRUTH. It upsets the little fabric of LIES you've
> created about yourself.

And those would be...?!?!

> > Ahhhh yes...Lennie once again shows that "honoring" Veteans is a
> >one way street for him.
>
> I HONOR all who actually served their country honorably.

Obviously not.

> I don't honor posers or posturers who can only claim generalities and
> spout gratuitous phrases or are only interested in fantasies of heroic
> "hostile actions" they were never involved with in reality.

Like I said...keep repeating that you yoursoelf over and over,
Lennie.

> > If you were truly an "enemy", Lennie, wwe'd not be having this
> >conversation.
>
> True. I'd be standing, watching a graves registration detail picking
> up your remains.

Uh huh.

> > You have no "honor", Anderscum, save for yourself and your ego.
>
> Vomiting more bile and hatred, ey?
>
> Not nice. Not even close to any "Amateur's Code," I'd say.

License! It gives HIM carte blance to be a liar, antagonist, etc etc
etc ! !

> You are envious. Terribly so. There's no other explanation for the hyena
> laugh writing...other than another symptom of your growing psychosis.

"Envious" of you, Lennie? A bitter, shallow shadow of a man who
can't do ANYTHING to "endear" himself to the very community of radio
operators he proposes to lead...?!?!

> > And YOUR "operative word" there was "HAD" tasks dealing with HF
> >radio...I HAVE dealings with HF radio...And NOT on someone elses'
> >dime, either.
>
> Past tense is fine. HF radio is no longer any primary medium for
> either national or international radio communications...it has become
> secondary to very high speed fiber optic digitally-encoded comm and
> geosychronous communications satellites.

If HF was the ONLY part of the spectrum that Amatuer Radio
embraced, you might have an argument. However it is only about 3% of
it, however it seems to consume 100% of your arguments about Amateur
Radio.

Too bad for you, but jsut one more example of how little real
understanding YOU have of Amatuer Radio.

Sucks to be you.

> That I was actually involved in HF radio communications before your
> birth, for three straight years, makes you very tense. It should, you
> have NO comparative claims verifiable through documentation or
> witnesses to prove your "matching" experience later.

Wether you were on discreet channels of HF, VHF or UHF...Army,
civilian or otherwise, and in 1950, 60, 70, or whenever, it has
absolutely NOTHING to do with Amateur Radio. You were essentially a
"wireless teletype" operator, nothing more, nothing less.

> > Your "link", Lennie, will be forever remembered in THIS forum as
> >a shameful and scurrilous attempt to USE those men and thier sacrifice
> >to make some silly attempt at improving your image in here.
>
> I don't "use" anyone in the military.

Yes, you did. You perpetuate the lie again.

> I'm just trying to advocate the abolishment of morse code testing for any
> US radio operator license. Instead, I get all this spewing of HATE and
> VOMIT from certain parties exhibiting classic symptoms of psychoses.

And again you exercise your "licensed practitioner by association"
with your correspondence school shrink wife. You have yet to tell us
which school of psychiatry YOU graduated from, Lennie

> Get some mental help, Steamy.
>
> It may improve your life and will certainly improve the lives of all around
> you.

Hmmmmm...a documented pathological liar asserting another person
needs help...Very cute.

Perhaps if YOU were to take your NON-Amateur Radio related war
stories, NON-Amateur Radio related "CV", and NON-Amatuer Radio related
practice of unlicensed psychiatry to a NON-Amateur Radio related
forum, YOU would be happier.

At least you MIGHT be "relevent".

Thanks. I do think interference is going to be a real problem for BPL performance, but ham radio interference will be a very small part of that. I suspect household devices will be far more significant. I wouldn't expect the ARRL to be in a position to test for that, at least in the demo phase. But can be a problem for radio hobbyists if the BPL companies decide to improve thier signal to noise ratio by boosting thier signal. If they do this after they establish BPL service, they can legitimately claim (after they're caught, of course) they are doing it as a service to all their rural voting customers. If this turns into a numbers game between large number of established BPL customers and radio hobbyists, the Part 15 rules may become very flexible.

And if the BPL people don't share their results on how well thier system fares under common everyday line noise, well, it might be a admission by omission.

Almost everybody agrees it's goofy. But it's still around, not because it's technolgically elegant, but because it is seen to fill a need. Maybe a couple of needs. It promises high speed internet access for what would otherwise be higher cost customers. And it might provide a revenue stream

for electric utilities who need to upgrade thier service.

Politicians have a choice. Give the BPL thing a shot, or think about
letting 'em raise rates right now.

> - - - - -
[snip]

Sometimes I wonder how many more creative people would use amatuer
radio if amatuer radio could be used in more creative ways. As an
example, Reggie Fessenden played his violin on the first non code
broadcast. Might Blendor inventor Fred Waring have put on a radio
show on his own homebrew transmitter? It's not inconcievable. I've
read that Bo Diddley made his own guitars and amps. Imagine how
many more radio hobbyists there would be now, if Bo was slamming
the strings on SW radio 30 years ago. I'm sure plenty of people
would love to hear Joe Walsh do the same thing today.

If radio were open to the public, there would be thousands more
people who give a damn about radio. And any politican will desire
the support of thousands who give a damn every bit as much as

he desires a snappy wardrobe and a full head of hair.

[snip]

Sometimes I wonder how many more creative people would use amatuer
radio if amatuer radio could be used in more creative ways. As an
example, Reggie Fessenden played his violin on the first non code
broadcast. Might Blendor inventor Fred Waring have put on a radio
show on his own homebrew transmitter? It's not inconcievable. I've
read that Bo Diddley made his own guitars and amps. Imagine how
many more radio hobbyists there would be now, if Bo was slamming
the strings on SW radio 30 years ago. I'm sure plenty of people
would love to hear Joe Walsh do the same thing today.

If radio were open to the public, there would be thousands more
people who give a damn about radio. And any politican will desire
the support of thousands who give a damn every bit as much as

he desires a snappy wardrobe and a full head of hair.

Yeah. As proposed, it might have too many problems to go into widespread use. However, if the biggest problem is their signal to noise ratio, they might fix it by boosting their signal. Let's hope not!

2138. practrical spectrum analyzer

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-26 17:50:39 UTC
From: payam79b@yahoo.com
Message-ID: <1e2005ff.0308260950.376d1cd1@posting.google.com>
Source record: 75503

Hi,I am student & curiously want to build a practical ,high frequency spectrum analyzer , I have searched a lot for a one such : GBPPR 0 - 1000 MHz Spectrum Analyzer,
A Spectrum Analyzer for the Radio Amateur By Wes Hayward, W7ZOI, and Terry White, K7TAU & some others ï¿½, according to my location I have some restrictions a bout some parts that they use in their circuits , but I think may poor mans spectrum analyzer is a good chaos because always I can find tv tuner as mixer , I think about four times I have emailed to MURRAY BARLOWE, WA2PZO
(radioguy@hoflink.com) the owner of home page of poormans sa on www.science-workshop.com (Updated 2/26/2003) but he doesn't answare ! has anyone buy recently from it ? does any one see the book or CD of "BUILD YOUR SPECTRUM ANALYZER " THAT IS SELLED ON HIS HOMEPAGE?
I DON'T WANT TO BUY THE KIT , I WANT TO BUY THE book or CD & according to the circuits & the parts I can find here make it,so does that book indicate circuits in detail or only say how do the kits should be connected together ? if so where can I found the circuit of it ?
Any help would be most appreciated.
Payam
Can you email me for reply instead of answering on group ?
payam79b@yahoo.com
thanks!

Posted from G4NJH site http://www.innotts.co.uk/asperges/whatsnew.html

Yes, it's happened after all these years. The Morse Code test required for HF transmitting licences has gone.

Many a tear will be shed that that so hallowed and venerated, equally loved and detested, has been done away with. There will be cries of "shame" but this is the 21st century and it was felt that this was an anachronism.

The recent IARU conference voted to do away with it, and the UK has moved quickly to comply. On the other hand, some countries such as the US will NOT be abolishing it it seems. Why exactly, I do not know. Is it some sort of class prejudice, with privileges carefully maintained or just bureaucracy slow to act.

We shall watch with interest. Meanwhile, remember nothing can stop you USING CW, but you won't need it any more for a UK licence. The plethora of callsigns does not change though. So, welcome to HF. I wonder how many of those who "would not go near HF under any circumstances" will suddenly now change their minds. Or am I just an old cynic??!

That is not the correct method of applying the
Wouff Hong in any case. I would provide a
detailed description of the act, but it is too
intensely horrific for the delicate sensibilities
of the newsgroup readers.

Heh, heh, that is a bit OT in this group!

What I'd suggest is a video board such as one of the Radeon's that have a television output in addition to the SVGA output.

Note that there will be significant degradation compared to a normal computer monitor.

There are outboard devices, but I don't like them as well as the internal ones.

I think there is a big panic about something that will probably be a minor annoyance to some. Not a problem to most. Do people seriously think that airports are just going to cease communicating with their planes? How about the military HF network. I can see them now. Sitting around the pentagon saying "forget national security, people have to get their email". Think about it.

Hey Frank, where'd you ever get the idea that radio *isn't* open to
the public?
I never knew anyone whatever who wanted a ham radio license who was
barred from getting one. There is a small matter of qualifying for it,
of course, as there is in every endeavor where others can and will be
impacted when the licensee knows not which way is up. But it has
always been open to all comers.

Now if you're talking "open" like CB is open, that's a horse of an
entirely different color.

That's funny, I posed that question not too long ago. There are a few (Two immediately come to mind.) NCT's who claimed that they could upgrade anytime they chose, but were "entirely satisfied" with 50 MHz and up and really had no use for HF. Wonder how long they'll remain Technicians or will a /AG or /AE magically appear behind their calls all of a sudden?

Absolutely.

The special election for recall in the state of California does NOT involve amateur radio.

Never did. Won't.

>Don't hold your breath. Political discussions are
>almost a tradition in this newsgroup, and your rants (about the "bigotry of >easterners" and so on) certainly isn't going to change that.

Okay, you must be establishing that this is NOT an amateur radio policy discussion venue, right?

YOU want it to be all about politics, anywhere and everywhere?

There are hundreds of Chat Rooms and other forums for discussion of everything that is NOT about amateur radio. Go there.

<djfinn2@nospam.bellsouth.net> writes:

>Len, this is bullcrap, and, it is boring.

Heh, I thought you'd say something like that. :-)

>You have no idea to what the math really means.

Yes I do and so did my instructor over 30 years ago. Did a verbatim
oral on the whiteboard to prove the transformation from the simple AM
signal equation to the one that had the three terms for Carrier, Lower
and Upper Sideband components.

Not only that, but the next task on that oral exam was to show how
mixing the AM signal in two parallel paths with quadrature-phased
RF sources would allow selective demodulation of the sidebands.

>Sorry, but I will not continue to give you a forum just so
>that you can 'baffle 'em with bullshit'.

It's not "bullshit." Just a bit of algebra which can translate to radio
hardware values.

>That's what you are doing. I doubt
>that you even have a BSEE, otherwise you would not have to cite the author
>when explaining what is common electrical engineering text book material
>(that you have misinterpreted).

It is normal practice among ALL technical people to reference sources.
That includes PhDs, Nobel Laureates, Masters, and Bachelors.

Nothing was "misinterpreted," Finn. Nothing at all.

The only difference between what I wrote and the original work is the
inability of the Internet medium to allow Greek symbols and, especially,
subscripts and superscripts.

I can carry this a LOT farther just by spending some more typing time.

Harmonic content due to distortion in a not-quite-linear amplifier is one
huge area. That can be combined with the basic AM equation to show
how and how much harmonic content is generated. Did that in the early
1970s for RCA Corporation as part of the special FCC license
documentation required for 1.6 GHz SECANT avionics transmission
(a corporate R&D program).

I COULD do all that typing, but it would be to little avail. You would
simply say "it's a lot of bullshit" and dismiss it without mentioning a

single bit of the mathematical explanation. You would probably continue to do the gratuitous personal denigration...again without considering the subject matter or anything under real discussion.

Meanwhile, I'm still waiting to hear your erudite explantaion that was something about "phase changing will cancel all distortion." :-)

Got to be stretching the truth. NO ONE is born knowing the band limits and
other FCC regulations. And they do appear on the test. Therefore the
person who said they didn't study is LYING. They had to have read the
material somewhere, somehow at least once. That classifies as studying.

No need to slam the ARRL. There isn't any other group available to do so. They have the resources to evaluate the common usage of the band, develop it into a band plan, and then to widely disseminate the information so that it is useful to all. What other group can match that? Simple: None. If you want input, join the group and work from within. Don't slam it from without.

>

True that BPL is intended to work on conducted signals. False that the power lines are "incredibly poor" as receiving antennas. Totally untrue. In my town, the city (the city is also our electric distributor) put in an oddball lightning protection which keeps the topwire on every pole at RF ground. The effect is know as "Radio-Free Newark", a place where you need something like my R-75 to get Philadelphia AM stations (we're about 80 miles away from Philly, about 20 miles West of Wilmington, DE).

In fact, some recent ARRL work concerns interference in the other direction, with the power lines receiving. A ham who happens to point a beam at a powerline will slow BPL, and may in fact bring BPL to its knees (bad packets = 100%).

That's going to be REAL fun, with the power company having to work very hard to find the problems their paying customers are mad about, only to complain about it and get back the standard FCC letter about ham interference? The FCC has been pretty unbending about that in the past; if the ham is legal, its YOUR job to keep her out of your equipment, and the cost of your equipment or how much money the interference is costing you don't enter into it.

It's my wild ass guess that BPL won't be a big success, but I do think cheating on the BPL power will be a real temptation. Anyway, it will be tough on radio hobbyists in a BPL neighborhood, and it certainly will be heard over a wider region. But, you're probably right. The world isn't coming to an end over this. Brother Stair has been quiet on the whole BPL issue.

OK, amateur radio is open to the public. But nearly all amateur radio activity is either contacts between hams or some sort of test. I'm under the impression that amatuers broadcasting what might be considered entertainment programming to the public is banned. Am I wrong about that?

>

More like pirate radio. I've heard some very entertaining stuff, and I hope to hear alot more. I know that time can be bought on an independent broadcaster, but I'd really like to know why what Alan Maxwell and the other do is illegal. I think hobby broadcasting would bring alot of positive interest to SW radio.

His words here, or posted/published anywhere else, don't provide you with an excuse to use those words in an ongoing smear campaign against Kim or anyone else. I think Hollingsworth would be appalled by your actions.

> For the simple reason that my behavior is
> not in question here.

Your behavior is in question here - by me. So, again, since Kim was willing to contact Hollingsworth over the choice of her callsign (her behavior), why don't you contact Hollingsworth to ask if he feels your behavior (your use of his words to publicly harass Kim for many months) has any effect on Ham Radio?

> Kim is not being "harassed." She is merely

Get off your pulpit, Larry. You do not speak for YL radio amateurs. My wife is not offended by Kim's callsign. Instead, she thinks you're stuck in a sexist past - a past where men told women what they could and could not do. That past is gone.

That is two female radio amateurs (Kim and my wife) saying the opposite of what you claim. So exactly where are all those YL radio amateurs you claim are offended by Kim's callsign, Larry?

Does anyone believe the bumper sticker that says "United We Stand"?

Here, on this newsgroup, we all sound like a bunch of assholes who hate each other.

And we all sound like a bunch of *hams* who hate each other, if you read this newsgroup.

Why do those people want to kill us? I don't know. But if we fight amongst ourselves, they win. They win by sitting back and watching us self-destruct.

It may be fun, but keep in mind a few things. 1) It is difficult to control where a signal goes. 2) There are international agreements that help to avoid interference.

Given the above, allowing radio to be a free for all would only serve to promote interference from stations on the same frequency. That interference can detract from people listening to transmissions that are complying with the agreements and laws. Interference can have serious results if it interferes with aircraft or miliraty communications.

Just imagine the shortwave spectrum being used just like the 27 MHz band.

I'd rather have the order that the laws and agreements provide.

The metric system of weights and measures has been legal since 1866 in the United States. By Congressional legislation.

That's 22 years after the first commercial Morse-Vail telegraph system went into service.

That's 19 years before Marconi first tried wireless radio in Switzerland and 20 years before the first actual radio communications was demonstrated and recorded in Italy and Russia.

It's only in your fantasy.

Without proof it doesn't exist.

> The RRAP back channel folks can ask me if they care to, and I'll
>tell them, but you're not invited. You won't play nice in e mail
>anyway.

I sent you several copes of some of my proof. You refused to accept it, claiming those same "not nice" comments.

>> You haven't named a single one of the "hostile actions" you claim you
>> were in.
>
> Because it's irrelevent to this forum. I already invited sonme
>to e mail me direct. Brian took me up on some of it.

Radio communications is still radio communications. You didn't do any
in the military, therefore you can only tell stories about it. Your
unproven claims are just fish stories.

You didn't have any "hostile actions" while in the military other than
bar fights.

>> >> It's painfully obvious, Brian. Steamy hates me. I served in the US
>Army
>> >> so, naturally to him, anything Army is subject to hatred,

>DX" as an Army radio clerk.

NOT as a "clerk," you confused story-teller and braggart.

I DO have proof, documentation, and witnesses. You have NONE.

Who is the "liar" now?

> I am SO (un)impressed.

Feel free.

>> You HATE someone else being successful in anything so much that it
>> makes you almost violent. That's a bad mental symptom which needs
>> treatment.
>
> Nope. I just love making a fool out of your with your own words.

Your "love" is just turning into hate.

You don't make a fool of anyone but yourself.

I DO have proof, documentation, witnesses. You have NONE of those
things.

> Actually, it's very sad to see someone who had something once spend
>what ought to be his "mentoring years" being so childish and idiotic.

You are describing yourself, not me.

>> >> Steamy never did any primary communications while in the USMC.

I've never had problems sleeping and I AM correct.

You have NO proof, documentation, or witnesses to prove your claims.

>> You've NEVER stated in any detail what you actually DID in the USMC
>> insofar as radio communications. You conveniently gloss over any
>> details. Anyone who really liked their past work will remember details
>of
>> it and "talk shop" about it. You never do.
>
> Because what I did in the USMC is, for the most part, irrelevent
>in this forum, Lennie.

It must be since it did not involve radio communications.

You have no proof of that "USMC radio experience," no documentation,
no witnesses to name.

You can't claim any military radio experience because you never had any.

> Unlike you, who MUST reassert his king-of-the-hill personna in
>order to have any self respect, I don't need or enjoy such retellings
>of my service career for sporting purposes.

Anyone with a little military radio experience would look like a "king of
the hill" to you...who never had any.

What is galling to you is that I actually had such experience and you did
not. You are both envious and resentful.

> If it makes YOU happy, Lennie...go right ahead...Not that any of
>the 20 people who have told you that they are sick of hearing it over
>and over has deterred you at all...

What "20 people?"

Fifty years ago the US military wasn't using morse code modes for
long-distance primary communications on HF radio.

PCTAs such as yourself are very angry over such truth. You should be
because it destroys your fantasy images of morse code saving the day.

>> All you talk about is some general phrases (copyable from any little PR
>> booklet) about "warrior skills" and honor and glory...NO DETAILS.
>>

>> > Sure I can. You are liar, an antagonist, and a creep.
>>
>> Antagonist, yes. Liar no.
>
> Antagonist yes, Liar yes. As much as I know you hate hearing it,
>"It's in Google".

That same "Google" has all of YOUR messages as well.

You still haven't offered any proof, documentation, or witnesses to your
mighty military accomplishments.

>> I've provided details, references, even names of still-living witnesses
as
>> proof of what I've done.
>>
>> You've never tried to confirm anything, have you?
>
> Hmmmmm...yep....ya wanna go back over your sterling performances
>in Pennsylvania?

At Naval Air Development Center, Warminster? I have no problem with that. That isn't germane to the newsgroup, though, a number of Pennsylvanians in this newsgroup are upset over it.

Despite what Kellie wanted to twist into his imaginings and resultant attempts at trashing, I was there as an employee of RCA Corporation as a field engineer representative for an RCA R&D project. That was in 1971-1972, three decades ago. The project testing was successful.

>> You've rejected a scan of my first First Class Radiotelephone
>(Commercial)
>> license, not once but four times in e-mail.
>

>you "erred". You USED an offer of the forwarding of the license, but
>you used it as an opportunity for a practical joke.

The FIRST e-mail attachment was a mistake (admitted) on my part.

The SECOND, THIRD, and FOURTH e-mail attachments were correct.

You REFUSED to accept the second, third, and fourth.

You just can't stand the truth.

> You won't "use" me again, Lennie. The really SILLY thing is you
>did it to several people, ergo creating a pool of folks able to
>corroborate MY version of events.

What "corroboration?" I sent e-mail attachments to others. Except for a Pennsylvania PCTA, those were accepted.

YOU created a trashy "personal web page" on AOL damning me in an attempt to "get even" for your terrible "hurt." Pure libel there. When informed of its existance, AOL SHUT YOUR PAGE DOWN.

AOL didn't have any problem tossing a clear case of libel. Anyone could see the libel there. AOL was fully justified.

> Pretty danged stupid, Lennie.

Nothing "stupid" but YOUR libelous AOL page...and your terribly offended ego hurting so much you can't stand yourself at times. Tsk, tsk, tsk.

>
> Perhaps if YOU were to take your NON-Amateur Radio related war
>stories, NON-Amateur Radio related "CV", and NON-Amatuer Radio related
>practice of unlicensed psychiatry to a NON-Amateur Radio related
>forum, YOU would be happier.

I don't practice "psychiatry" anywhere. Like every other engineering undergraduate in 1960s California, I had the required two semesters of psychology.

You are a psychology 101 textbook case of psychosis brought on by a combination of being a control-freak, envy, ego, and unable to

respect anyone who stands up to your bullying tactics and general distortion of everything that doesn't satisfy you personally.

Radio is radio. Electrons, fields and waves work the same regardless of some human legislation creating different kinds of radio services.

You insist on everyone meeting YOUR terms of discussion...if they don't you go into the bullying tactics of personal denigration and insults. That's
a strong indication of the well-established psychosis.

> At least you MIGHT be "relevent".

The subject line of this thread is "The BPL of rrap." You've once again turned it into another forum of HATE directed against another who has differing viewpoints from yours.

You can't let go of that HATE. Another symptom of the psychosis at work. Get mental therapy.

Really? With so many messages posted in the CB newsgroup, I was certain you had an interest in that. Was the equipment too complicated for you to use? Or did the CB'ers run you off because you were simply too rude and too negative even for them?

No, you've been ranting. If you had proven code testing serves a purpose today worthy of a specific government requirement above and beyond all other operating modes, code testing would not be going away.

> Now, it's your turn. I axed YOU to "prove" that

> talking about!

The proof is obvious, Larry. Code has disappeared or is disappearing in all other radio services. Since code testing was established as a license requirement to help maintain a pool of skilled radio operators and code has now virtually disappeared outside ham radio, code testing no longer serves a purpose as a license requirement. Code testing is disappearing exactly because of that.

> That's because we have a dumbed-down culture, and

Ah, the dumbed-down culture myth again. People today are not as dumb as you'd like to think they are, Larry. And they're certainly no dumber than some of those in our generation or in previous generations.

If you're planning to use it as a primary monitor, you're not going to be satisfied with the results. Text will be blurry and the colors will often be sharply off. Anyway, there are many products that offer this capability. Most are used by those seeking to use a television for classroom instruction (programs like PowerPoint are used to make presentations that look good on a television). Search around some of the online computer catalogs.

I suggested legalizing hobby broadcasting for entertainment purposes. Why
couldn't hobby broadcasters could get thier own slice(s) of the spectrum and
operate in a competent way?

Does program content increase interference?

"Fifty years ago" would be the summer of 1953.

In 1960...

... the US Navy was using morse code on HF for the fleet "Fox" broadcast
to all ships at sea 24/7/365.
... the US Navy was using morse code on HF Ship/Shore circuits from all
ships below the size of CA (Heavy Cruiser).
... the US Navy was using morse code on HF for Task Force and Task Group
Commander traffic nets for all forward deployed battle groups.

In 1965...

... the US Navy was using morse code on HF for Ship/Shore circuits from
all ships below the size of DL (Destroyer Leader)
... the US Navy was using morse code on HF for airborne TACAMO
communications to deployed attack submarines
... the US Navy was using morse code on ELF/VLF for communications to
deployed nuclear submarines

In 1970...

... the US Navy still kept morse code circuits active on HF as fallback
for afloat units which might lose their Orestes covered ship shore
capability.

I could go on and on with other examples more recent that fifty years
ago, but I think you get the picture....

....your research on this matter is dismally flawed.

Good luck on this one now.

With all kind wishes,

de Hans, K0HB

It's MUCH more effective if you DO NOT subscribe
to QST, support their advertisers, and discourage any
potential membersfrom joining. Deprive them of their
dues paying members and watch em' scream. Make sure
you tell the ham stores that you will not patronize them
if they appear in QST or support ARRL, and tell them
why. The days of the Wouff Hong are LONG GONE.
Denying them their primary sources of revenue is FAR
MORE EFFECTIVE!

BPL chipsets can keep some frequency ranges free from QRM. Somebody in
the german ham newsgroup has looked at it with a spectrum analyzer
or whatever.

And I think military users could change to VHF or UHF, even sat
communications anyway if they wanted. They could also keep BPL
out of special areas. I doubt military users in suburban environments
give a damn about HF.

BPL *is* a real threat.

What's been established is that you seem to have a double dose of
the "Do What I Say, Not Do What I Do" syndrome this week.

You have posted legions of absolutely NON Amateur Radio related
bilge yet seem to try and force others to not do so...

> YOU want it to be all about politics, anywhere and everywhere?

And you don't?

> There are hundreds of Chat Rooms and other forums for discussion of
> everything that is NOT about amateur radio. Go there.

Go yourself, Lennie. You're NOT an licensed Amateur Radio
operator, have no stake in Amateur Radio, and have absolutely refused
to do anything constructive FOR Amateur radio.

Now, next time you allege that Dave Heil is "barking orders" at
you, don't be surprised if the UPS man at your door delivers a swift
puch in the nose instead. That's what's in style for the two-faced
this season.

Wow, Dave! That's a stretch. With just a few notable exceptions, most
of us here in rrap enjoy our arguments with each other, and don't take
it too seriously or personally.

Or do you want to tell us just what we should think and say?

Again I ask....WHO CARES???

You have absolutely NO RIGHT to suggest that anyone take ANY
discussion to ANY other forum for ANY reason.

YOU have violated that very same "it's not Amateur Radio" clause
so many times it's pathetic...And you're the only one who can't see
how hillarious it is to see YOU suggesting others do so!

> Why do you keep insisting it is?

I didn't say it was. I say you are an idiot for trying to insist
that others discuss non-Amateur topics elsewhere when YOU so
prolifically QRM this newsgroups with your own non-Amateur bilge all
the time.

> > For the purposes of THIS forum you have yet to do anything except

It's not about your "access". It's about YOUR penchant for going
off on long non-Amateur related threads then trying to "moderate"
someone else into not doing the same.

You are two faced. Most pathological liars are.

> Remember your short 3-day life of LIBEL about another.

It ain't "libel" if it's true.

Putz.

Then explain reality TV, Dwight! 8^)

- Mike KB3EIA -

Actually, I don't think that people ae dumbed down compared to whatever mythical time that they were "smart".

I'm told that back in the late '50's, there was a push to teach more science in schools, because the US was way behind in that. There were people complaining how the US wasn't teaching the kids things they should know. Sounds a lot like "dumbed down" theory to me. But now some believe that was some kind of golden age, when the kids were taught right, dadgumit! Nostalgia anyone?

You won't find me espousing "dumbing down" theory even though I'm a pro-coder.

You will find me espousing learning of Morse code and including it in testing because I think it is a useful knowledge. And I'm always in favor of knowledge. (spare me the skill vs knowledge argument, pse).

BUT! the individual tests can be "smartened" or "dumbed". All that is up to us. We decide.

NO test is needed at all to put up a station on the air. We could have an application where we simply give our name, address, and sign a statement that reads that we promise to abide by the rules. We would get a little book of the relevent rules, like when we license a boat and get a safety pamphlet.

Only within line of light. For longer distances, its all HF. Look up the
frequencies and take a listen. Any time, day or night there is traffic, lots
of it.

There are active military and government frequencies spread throughout the
HF bands, I have, sitting in front of me, two pages worth of active military
frequencies. This does not include FEMA, DEA, ect. Yes, they also use VHF
and satellite but maintain activity on HF for long distance as VHF is line
of sight and satellites are to vulnerable. You can do everything you want to
maintain your chicken little views but some of us know better.

There are a ton of things potentially more harmful and more
likely to bring amateur radio "one step closer to extinction"
than Kim's call sign. However, it is in bad taste and I can't
imagine anyone requesting such a call sign other than to bring
attention to one's self, but then there are those who seem to
seek the lowest common denominator.
I knew one ham couple and the wife's call sign (not requested,
just what was issued) had the last letters DTA. He had a T shirt
made for her that gave the call across the chest with the
phonetics, "Don't Touch Anything".

One could easily be fabricated from a piece of old wood. "Old plow
handles" etc.. I would not sand the device. It's much more effective
when the splinters are functional. I've heard tell fleet brand enemas
are based on the original Wouff Hong design. Not as glamorous as
machine gun design, but useful none the less. MK

Charles and I have found many reasons to disagree in the past, but on
this matter we are 100% in agreement.

Here on rrap the pro-coders, no-coders, slow-coders, and limp coders
rail on and on about a subject long since put to bed by the regulators,
and the whole meaningless fight takes on a surreal similarity to the
fights between sailboaters and motorboaters, arguing which is more
technically advanced, which can get through when conditions are bad,
which is modern vs. invented in the olden days, etc., etc., etc.

Meanwhile, on the shore a group of commercial developers is plotting to
buy the lake, drain it, and build a strip mall.

Rather than band together to save our hobby, we seem hell-bent on
finding inconsequential and OTBE things to fight about, splintering and
diluting whatever influence we have on regulators and the general
public.

There are other topics in here too, Hans. You might want to look into
filters for your newreader so you don't have to read the Morse code test
posts.

> Meanwhile, on the shore a group of commercial developers is plotting to
> buy the lake, drain it, and build a strip mall.

And BPL is one of those topics.

> Rather than band together to save our hobby, we seem hell-bent on
> finding inconsequential and OTBE things to fight about, splintering and
> diluting whatever influence we have on regulators and the general
> public.

And I have filed comments, will contribute money, and will attempt to
get my club to contribute a sizable amount to the BPL fight fund.

It's a big world, with many different issues in it. If I spend some of
my time yipping about Morse code testing, it's my time to waste. And
it's not really wasted - its recreation.

But as a person that can walk and chew gum and take a drink of water at
the same time, I can focus on a number of things at one time.

As I have written, BPL devices *do* have the possibility to keep out
of *some* HF frequencies AFAIK. Ham radio would not be the first candidate
for this. Air mobile and military users would be more likely to benefit
from it.

And maybe it is a different perspective here in Austria, as our military
has a lot less influence on our society. We've got utilities actively
deploying this stuff, and while it is far from being everywhere, it is
a real threat in some areas. I suppose they could not care less about
implications of BPL for the military. They just do good lobbying,
and they have shown their political influence in many issues in the
past.

Don't count too much on the military. They might just use this as
an excuse to get funding for a new satellite based infrastructure or
other alternatives. Moreover I suppose HF is most valuable to the
military in crisis regions, where there is no BPL anyway ;)

At least one other person noted that the quality of picture
will be much worse than a computer monitor. That's
maybe OK depending on "what application" you want to use a TV
for instead fo a monitor. These days computer monitors
are dirt cheap.

Cheers,

Will BPL have the same effect on military radio as it has on radio
hobbyists? Don't they have spread spectrum capability which is highly
resistant to interference?

Thing is, BPL is also spread spectrum.. would not two spread spectrum
systems on the same bands interfere with one another??

I don't know alot about spread spectrum, but it's my impression that the receiver and transmitter are in sync. If the interference doesn't match the expected synchronization, the receiver ignores it. Also, the bandwidth of spread spectrum is so wide that spread spectrum operations would have to overlap, otherwise there would only be a few allowable channels.

But, any spread spectrum experts out there are free to correct me.

They probably do but not in widespread use nor is it likely to be. They do also have the capability to replace most of that HF traffic by satellite. They did, at one time, start to scale back the HF ops in favor of satellite but decided that was a bad idea from a reliability standpoint. They do have the satalite capablity but maintain HF to. The military, in any case, is only a part of the government HF operation. If bpl has the capability of not using certain segments of the band, due to the amount of space that would have to be left alone, the bpl spectrum is going to be pretty holy. In any case, I really don't think it is a viable technology, I seriously doubt it will be the major rf disaster that some are saying it will be and I don't think it will last long if it gets off the ground at all.

I have to agree with you on that one Len over 21. QST and technology parted company years ago. Heck, a new magazine started up because of it, called Ham Radio. Unfortunatly they also folded.

You do of course know that the ARRL also publishes what they call a technical magazine, don't ya? I don't even bother looking at it. I think they should have left technical articles in QST as before.

But then the league has done a lot of things that I don't like.

I understand Steve. I figure it will have to go the way congress had to
slap the FCC around and 'revisit' their opinion they just had on
broadcasters and ownership percentage of market.

I have no problem at all in bending my elected members of congress, and
will do so.

I wonder if the lab has defective transformers that spew out rfi? I wonder if the lab regulary simulates lightning strikes on the lines carrying BPL? I wonder if the labs simulate the sometimes awful antiquated power lines that the signal would have to go over?

Lessee, he told me to take the post out of here, and that it was noe of my business because I'm not a registered voter in California.

Let us say that is a valid argument.

So Hans simply substitutes the related words, turning it into what I consider a perfect squelch.

Was Hans not relevent?

It's a good squelch, unless you subscribe to the dictum that that other guy wins, always.

And certainly, I only refer to squelching in the normal sense. Some people are not accepting of squelchification, as it were.

> systems on the same bands interfere with one another??

Yes, but to a limited degree.

One characteristic which distinguishes a spread-spectrum
(whether frequency-hopping, or direct-sequence) system from
a channelized one, is the gradual way the channel
signal-to-noise ratio can degrade as more stations are added
in the same spectrum space. This "graceful degradation" is
in stark contrast to interference in standard
single-frequency applications, where a collision of two
signals means no link.

Think of two different transmitters sharing the same 1000
frequencies. Each "hops" to a new frequency every few
milliseconds at most. If both systems use different channel
sequences, it's just occasionally that both would land on
the same frequency and interfere with each other. And even
in this case, the total amount of time where they're
mutually interfering is perhaps a millisecond or less. So
the extra signal sharing the frequency has mostly the effect
of making the channel a tiny bit noisier for all users, but
not to blot out other signals.

As you add more and more spread-spectrum stations, the
probability of a "channel collision" of course increases.
However, by carefully choosing the sequences and making sure
they don't accidentally "lock horns" in synch for a while
following the same sequence of frequencies, the quality of
the link degrades slowly with each new station.

I suspect this "graceful degradation" property of spread spectrum is more of a driving force than the potential security and stealth that this system provides. It allows more users to share the same small frequency slice, than would be possible if you just put narrow-band FM equipment and jammed them together as close as possible.

Funny how often unexpected benefits spin off of basic research. Here's to renewing science and basic research. Not everything important to business can be measured in quarterly profits. Our competitors, who seem to get this better than a lot of US companies do, will eat our lunch for us if we don't start thinking long-term again. IBM and HP "get it". It's Congress that we need to wake up next. :)

A recent New York State Math Regents exam results were tossed out because so few students were able to pass the test. Passing the test is required for High School graduation. During pre exam trials of the questions it was found that only 47 percent of those who took the exam could pass the test.

So what does this have to do with CW testing ? Absolutely nothing except for stupidity.

You're right about that. Unfortunately, the standard business plan is to make as much as you can in the short term and then dump the company. They have no interest in anything that won't pan out in 6 months.

Clearly, I certainly wouldn't pick such a callsign, and hopefully neither would my wife. But that is just our choice, not a condemnation of Kim's choice. I'm not going to attempt to walk in Kim's shoes, simply because I know little about where she walks. She does, so I'll accept her choice for what it is.

Right: Didja ever add up the number of published MF/HF freqs just the
Coast Guard and the HF air traffic controllers use?? And those are
just a few of the published gummint-used freqs. Then come who the hell
knows how many unpublished freqs also used by other civil gummint
types.

> If bpl has the capability of not
> using certain segments of the band, due to the amount of space that would

It would be one big hole, "selective BPL interference" is a ridiculous
and completely unworkable concept.

> In any
> case, I really don't think it is a viable technology, I seriously doubt it
> will be the major rf disaster that some are saying it will be and I don't
> think it will last long if it gets off the ground at all.

If it's allowed to get off the ground at all a huge amount of damage
will be done even if it does eventually peter out. The closing the
gate after the cows get out syndrome, etc.

As far as BPL being an RF disaster is concerned I've travelled twice
to one of the BPL pilot areas specifically to listen to the stuff
hands on. Been there, done it myself and I need to tell you that yes
BPL is a potential HF/VHF disaster which needs to be squashed *before*
it even gets off the ground.

Anybody who belives otherwise needs to get off their butts and away
from their keyboards, pack up a rig and actually go listen to stuff
before they spout off about it.

I shouldn't have to go back and point to some of the crazy things people watched and did in years past. Remember the Village People, Kiss, Disco, the song Muskrat Love, houses filled with incense, chopper motorcycles, the song My Ding-a-Ling, Elton John's sunglasses, and so on.

> Actually, I don't think that people ae dumbed down

I agree. Every generation has had it's moments - both good and bad.

> BUT! the individual tests can be "smartened" or
> "dumbed". All that is up to us. We decide.

But we have to decide within the constraints of the intent of those tests. To do that, we have to understand that intent. Far too many try to view the Ham Radio license exams as some sort of knowledge exam, when they are instead entrance exams into Ham Radio. And Ham Radio is a recreation, not a vocation. The FCC has other exams designed to examine vocational knowledge, as do local colleges and universities. Given those facts, I see no reason to change the existing written exams.

I do agree there is a problem that must be addressed. But, sadly, I suspect the root of the problem lies mainly outside the school system. Television jumps immediately to mind. Television has fed children an almost continuous message over the last few decades that smart kids are nerds and dumb kids are cool. With that in mind, there is little reason for kids to make any real effort in school. And, since Americans seem to prefer the television industry's freedoms over better educated children, the problem may never go away.

Dee, to be as succinct with this: there are many things in one's life that can be misinterpreted. While I chose this callsign with a desire borne out of a dare from friends and local hams here; nevertheless I didn't really consider that there would be misunderstandings about my callsign. And, for those whom have come to know me; or who "just know" me by virtue of their having a sort of twisted sense of humor--the callsign has been no big deal.

I've been in casual, contest, and emergency situations with my callsign. It has never, never been degraded, questioned, or commented on over the air--save one time when a passerby happened upon our repeater one day and I introduced myself, our folks and the repeater. He came back with, "well, hello Kim, W5TIT. I am passing through the....what did I just say?" He ended his question in giggles and that was all that was ever said.

To make a long, boring story short, the callsign has had the most inane objections right here in this newsgroup, and nowhere else. There's not a lady ham out there who's ever had anything but a hand covered giggle over this callsign. It's been a great ice breaker and it immediately lets folks know that to know me means to know and understand that I in no way take myself seriously--and there's not much they are going to have done or do that's going to run me off. Simple as that.

That it runs folks like Larry off--for me--is a godsend...

It's no myth, Dwight. Our culture has been stagnated by 50 years
of liberal propaganda in the high schools and universities, the constant
whining of the liberal media, and the "mainstreaming" of any kind
of perversion known to man in the name of "enlightenment." Sorry, but
I have to call it like I see it. It's a dumbed-down culture, pure and simple.

>a sexist past - a past where men told women what they could and could not
>do. That past is gone.

With all due respect to your XYL, she is not qualified to judge me. She has no idea how I relate to women in person. Moreover, I don't tell ANYONE what they can and cannot do. All I am trying to do is influence Kim to make up her own mind to do the right thing.

> That is two female radio amateurs (Kim and my wife) saying the opposite of >what you claim. So exactly where are all those YL radio amateurs you claim >are offended by Kim's callsign, Larry?

I have never stated that any specific YL hams *were* offended by Kim's call sign. I have only stated that I agree with Riley Hollingsworth when he says that Kim's call sign has the potential to do harm to the image of the ARS, and YL hams in general. Kim and your XYL prove absolutely nothing with regard to the validity of my objections to her (Kim's) call sign.

>misinterpretations.

Dee:

I believe that is precisely what Riley Hollingsworth was addressing in his response to Kim's E-mail. There are certainly some people with bad enough taste and judgment to not be "offended" by Kim's call sign, but that hardly accommodates all possible perceptions. My perception of her call sign is that it was chosen to purposely place a vulgar, sexualized image of YL hams "in the face" of her fellow hams, and worse, the faces of prospective hams who may not share her libertine philosophy regarding the image of the female form, hers in particular. This is supposed to be a family-oriented hobby/service, and I don't believe such an image as Kim is imposing on the whole of the ARS is the correct one. Therefore, unless and until she decides to change her call sign, she will remain the object of my outspoken disapproval. How long this continues is totally up to her.

> Actually, I believe she has explained that before. So, perhaps you should >search through the message archives for the answer. As for myself, since >it's really none of my business, I'm not really interested in the reason.

Dwight:

Actually, it most certainly is the business of any radio amateur who is properly concerned with the image of the ARS. This is supposed to be a family-oriented hobby/service. Mr. Hollingsworth said it most succinctly in his response to Kim when he raised the issue of the possible negative reaction of a parent/grandparent/aunt/uncle who may be considering this hobby for a young child in their life. Kim's callsign most certainly could cause such a person to question the judgment, if not the personal integrity and morality, of radio amateurs in general, through this one bad example.

Throughout my adult life, I've been told that "perception is reality." While I would personally make some allowances for poor choices based on the immature judgment of younger people, Kim is certainly of an age and station in life where such poor judgment is much less likely to be excused. She is the only one who can make this controversy go away. Should she choose not to, she leaves herself open to the criticism of those of us who *are* offended and *do* object to her choice of a Vanity call sign.

As all the efforts that have been put towards the arguments and other
negative stuff, were put to postive use, maybe the world of amateur radio
around us would not be "coming one step closer to extinction." If those
efforts were put to building amateur radio in general, we would be better
off.

Amateur radio will die on its own problems, not from exterior sources, as
the energy to promote and protect the service is definitely not being
utilized that way. This and other newsgroups are a prime example of the
cancer festering on our hobby/service.

Just even one more proof of what I mean. Attempting to control free speech when a differing opinion occurs....
Why should they have exclusive control of the whole amateur community when they only represent (roughly) a quarter of the population?

You keep saying I should join, but why should I?? List specific reasons, backed by facts. Not vague generalities or "big-brother/mafioso-like" reasons? All it is, is a very expensive magazine subscription, so let's not kid ourselves.

Let's not because everyone is entitled to their own opinion and
they're entitled to voice it per the articles of the US Constitution.

However, what Len has heard from the rrap peanut gallery is that he
doesn't have a ham license, therefore his opinions are wrong and/or
don't count.

He's playing a little TIT for TAT in his California Voting analogue.

It's really not so hard to see that.

> So Hans simply substitutes the related words, turning it into what I

Problem is, Brian, that beyond an inquiry as to what his interest was in ham radio, I never said his opinions don't count. That's someone elses argument. I'm quite neutral on what he posts. Post or don't, no problem.

That's painting with a very broad brush.

> Squelchification of free speech is now a good thing?

Being squelched is not denial of free speech. The choice to respond after being squelched is always there.

I won't disagree with your basic premise, but therin lies danger.

> And Ham Radio is a recreation, not a
> vocation.

And there is the trap! There are many recreations that require some learning to effectively use and enjoy them. Fishing and boating come to mind. I have a boat. I never took a test for its use, although I got a little pamphlet when I got my license. Whenever I bought a fishing license, I got another little pamphlet explaining seasons and creel limits, which are pretty darn analogous to band edges and power limits. But no tests.

>The FCC has other exams designed to examine vocational knowledge,
> as do local colleges and universities. Given those facts, I see no reason to
> change the existing written exams.

Just be on guard, because others do.

I have a baseball bat, can I join you? HA

I bailed out of the ARRL 14 years ago when it started to become clear that the Leagues agenda was tending more toward a policy of supporting lower licensing stardards (CB'er Ham). A pool of trained, capable radio operators means something to me and I could no longer stand to be a part of an organization that was moving to disregard that section of Part 97.

It was a life membership too.

Your point seems to be that we are discussing trivial matters, while
the important things go ignored.

If that isn't your point, then clue me in.

Or is this just last-wordism. In that case be my guest.

Strange way to look at it Airhead. I joined before there was any hostilities going on Airhead. In fact the Gulf of Tonkin Bullshit was in August of 64. I joined in July of 64. I was in basic training when the 'activities' began. So , no my reason for joining was not to "cause violent hurt to my fellow man".

However I did indeed do that later on.

I joined to do my duty to my country.

You are welcome to your opinions Airhead.

Who's really seeking the lowest common denominator, Larry? You seem to be saying that nothing should be mentioned on Ham Radio that might offend or confuse a young child. If we accept that position, all we'd be allowed to talk about is Barney and the Sesame Street characters.

Regardless, most adults today know what a "tit" is and are not offended or confused by the simple mention of it. If a child is, the parent should consider a discussion with them about human sexuality. If they're too young for that discussion, they're probably too young to be talking with adults on the radio or most other places.

If you're offended by Kim's callsign, you need to grow up. The adults of this world are not going to censor their discussions simply to cater to your unusually delicate sensitivities. And, to be honest with you, I wouldn't want to see Ham Radio go in that direction.

Since you're basing your objection on how it reflects on women ("a vulgar, sexualized, and demeaning connotation which reflects poorly on YL radio amateurs everywhere"), she is, as a woman, qualified to judge the weight of that argument. She has done so, and feels your argument lacks substance. She is, as a woman, also able to say whether Kim's callsign is offensive to her. She says it is not.

Your argument lacks substance, Larry. Three women have disagreed with your position (my wife, Kim, and Dee). While two of the three have reservations about Kim's callsign (they wouldn't choose it), none find it outright offensive.

Men once used shame and ridicule to force women to comply with their domination. That time has passed, Larry. Women are not ashamed of their bodies anymore, nor are they embarrassed by the mere mention of some part of that body. Would we (men) really want it any other way?

Oh BS Ryan, you think this bunch of mis fits on USENET has anything in common with the 'real hams' ?? I don't.

I have been here since I got a computer, way back in 1996. Not much has changed. Even some of the same folks are here.

Nothing that goes on here happens on the air. Its a good way to vent and have fun.

In fact I'll bet if you could take a pole you would find most of these folks are not on the air, for whatever reason, and don't care to be. This is their only connection to a enjoyable outlet they can't or won't use any longer. Being on the air and having fun.

Thank you so much Keith, here is what I sent.

****

I think the total ellimination of the Morse Code (CW) requirement will prove detrimental to the Amateur Radio Service. I believe it will make it so easy for trash to get into the ARS that it will eventually sound like CB Radio.

The testing has already been reduced to multiple guess. The CW test is a ten question joke. In general you should NOT reduce the requirements ANY MORE.

I base my comments on over 40 years as a FCC licensed Amateur Radio Operater, I presently hold a pre give away EXTRA class license.

Thank You for your time.

Ah, a grand conspiracy to rid the world of code testing. Absolutely shocking - and total nonsense.

> Unresponsive. We're talking about the Amateur
> Radio Service here, nothing else.

The Amateur Radio Service does not exist, nor has it ever existed, in a vacuum. At least two of our reasons for existing (pool of trained operators and emergency service) lies with those other radio services - radio services outside Ham Radio. Therefore, our rules and regulations must reflect the needs of those other radio services. At one time, those needs included code. That is no longer true. Code testing was once needed. That is no longer true.

Larry, it's spelled "dumb-downed" or "dumb downed." And, while I agree with some of your points about the education system, I'm not willing to make blanket statements about an entire culture.

Most schools and universities today are either state owned or state supported. Therefore, to find an answer to the problems with schools, we only have to look as far as our own state representatives. And, since they like the federal education assistance available to them, those representatives are not going to change unless we vote them out and are willing to fund schools locally. I see no effort in either of those directions.

I think most of us on here are adults Kim. We have all heard and all know what a TIT is. I doubt that most of us think your choice of W5TIT for a callsigh is offensive. I think most of us believe it is a pathetic attempt for attention.

I personally believe you are a closet exhibitionist.

Thank you for your time Twit.

My point has nothing to do with "discussing". My point has to do with our seemingly suicidal desire to fracture our image and marginalize our credibility.

My point is that the Amateur Radio Service exists at the pleasure of public opinion and regulators who are increasingly disconnected from our hobby.

Against that background, rather than band together to save our hobby we seem hell-bent on finding inconsequential and OTBE things to fight about, splintering and diluting whatever influence we have on regulators and the general public.

Morse Code testing is a dead issue, but here in this public forum we continue to poke and prod at it's carcass like a pack of squabbling hyenas with the same old rhetoric which started here over a decade ago.

Maybe I'm mistaken, but I think that's essentially the same notion offered in the message from N5PVL which opened this thread.

The difference lies in the use of that recreation. As you know, Ham Radio also serves a purpose outside pure recreation (emergency service, for example). Therefore, the FCC took a more proactive approach, but one that is not that different from other recreations with a more serious side.

Lets take your boat as an example. For pure recreation, you obviously do not need a license or operating exam. However, if you join an organization like the CG Auxiliary with the intent to use that boat for a more serious purpose, you are expected to take courses, pass exams, and maintain the boat to certain standards. The same is true for CAP and other similar mainly recreational activities with a serious side.

Do you follow what I'm saying here? I'm trying to simplify things, while still getting across the point.

Yep, Sounds like another one of those maggots that want the bands to
be given to someone else. Thats what happens when the bands are quiet.
The FCC gives them to another radio service. So I guess he would have
his Extra Class with a few less bands to operate soon instead of
letting other legit hams use the band to save it.

I will be here in a few years to hear you complain about the loss of
your bands.

Bye for now!

I sure have. Sometime take a peek at QEX and count up the number of
articles written by these "technical genius" nocodes vs. the number of
articles written by coded Extras.

> I think
> they should have left technical articles in QST as before.

Has pros 'n cons. Over the course of a year there's a lot more total
technical meat in the combination of QST and QEX than there ever was
in QST alone.

They are not trying to control free speech. Show your proof that they are doing so. They establish policies based on the input of their membership as does any other organization. They then carry through on that policy. Naturally not every member agrees with it but if we had to have a unanimous consensus nothing would ever get done. And they have no reason or obligation to pay any attention to the opinions of non-members.

They do not have nor try to have exclusive control of the whole amateur community. Show your proof that they do. They establish goals based on what their membership wants. That is what any organization does. Again they have no reason or obligation to establish their goals based on the opinions of non-members.

You seem to expect them to roll over and adopt YOUR opinion. That's unrealistic. Whether you join or not is your business of course. But unless you are a member, you have no right to expect to control their policies or for them to listen to your opinions and adopt your opinions. If you want to change them, join. If you aren't willing to join, don't expect to change them. That's pretty simple.

I know why I am a member. They can do things that I cannot.
1) Take the current BPL situation. They have the finances and facilities to do the research that I can't afford. That is but one of many things.
2) Product tests/reviews. I can't afford to buy all the test equipment, every new radio, antenna, etc and run my own comparisons.
... and so on.

The bands are QUIET? you say....as in few to no signals? Are your flippin braindead or something? What are you using for a receiver...a super-regen made by Lafayette in the 50s? Or do you even have a antenna?

Quiet you say? I can do twenty qsos an hour just passing out signal reports at 18 wpm on a straight key.

What a joke.

Here are mine Keith;

I think the total ellimination of the Morse Code (CW) requirement will prove detrimental to the Amateur Radio Service. I believe it will make it so easy for trash to get into the ARS that it will eventually sound like CB Radio.

The testing has already been reduced to multiple guess. The CW test is a ten question joke. In general you should NOT reduce the requirements ANY MORE.

I base my comments on over 40 years as a FCC licensed Amateur Radio Operater, I presently hold a pre give away EXTRA class license.

Thank You for your time.

People were predicting the end of the HF world when the hordes of
"extra-lites" and "general-
lites" were unleashed onto HF. After the newbie phase it didn't happen.
Also note that
14.313 happened long before restructuring, and everyone there had passed
at least 13wpm.
And the 2m repeaters in my town are as well behaved now as before the no
code tech.
So I would say the theory that code is a lid filter is not true or so
weak as to not be
worthwhile.

A side effect of the VEC system is that examines can't help but meet
other preexisting
hams, and likely hook up with formal (clubs) or informal groups of hams.
Vs. CB, which
is just "open the box and connect the mic and antenna and go blab on".

I have submitted the following comments:

Before the
Federal Communications Commission
Washington, DC 20554

In the Matter of)
)
Amendment of Part 97 of the Commission's) RM-10787
Amateur Service Rules to eliminate)
Morse code testing.)

To: The Commission

PERSONAL COMMENTS OF HANS BRAKOB, K0HB

OVERVIEW

These comments are submitted in response to the petition of
NCVEC which requests elimination of test Element 1 (Morse Code)
from the Amateur Radio service rules.

I. Discussion:

The instant petition requests the elimination of Element 1
(5WPM Morse code test) from the required test for General
and/or Extra Class licenses in the Amateur Radio service.

I find no persuasive argument for continuation of this test,
and support the petition to discontinue testing new applicants
with Element 1.

I am concerned, however, that other elements of the qualification
tests are not adequate to ensure a high level of expertise in
new applicants to the Amateur Radio service, and propose changes
in the licensing structure to ensure that all 5 points of
CFR 47 paragraph 97.1 (Basis and Purpose) are reasonably addressed
in the qualification process.

II Proposal:

I propose that no new applicants be accepted for the current
license classes and that after some reasonable grace period, no
upgrades be available in the current licensing structure.

A. New License Classes:

I propose that new license applications be available
in two classes, namely "Class B" and "Class A".

The "Class B" license would have an entry-level test (basic
regulations, safety, operating procedures, basic DC and AC
electronics). This class would have full frequency and
mode privileges, power limited to 50W output. The license
would be issued for a period of 10 years, and be non-renewable.
Holders of this license would be required to have 2 years
experience as a licensee (ï¿½time in gradeï¿½) before being
eligible to upgrade to ï¿½Class Aï¿½.

The "Class A" license test would be of a difficulty level
similar to the current Extra class test, and would have
full privileges at power levels up to 1500W, equivalent to
current Extra Class license holders. This license
would be issued permanently without requirement for
renewal.

B. Status of current licensees.

Current licenses could be renewed indefinitely, and would
retain their current operating privileges.

Current Novice, Technician, General, and Advanced class
licensees could up grade to ï¿½Class Aï¿½ at any time.

Respectfully submitted,

H. Hans Brakob, K0HB

I am a survivor of the New York State Regents' Exams 50+ years ago.
It was a joke, because the last semester of each subject was
devoted to reviewing past Regents' exams and therefore we learned
zippo new during that time except how to pass the exam. And this was
in a high school for nerds.....

>So what does this have to do with CW testing ? Absolutely nothing

Or lousy teaching. I suspect the latter. Kids aren't all born
dumb - most get that way because they're not taught otherwise.

At one time (admittedly in ancient times) the Navy station that you
were interfering with could/would come onto your frequency and order
you in Morse Code to QRT, so knowledge/proficiency/skill (whichever)
in Morse was essential.

This, too, is no longer the case.

That's OK...anything that is progressive or modern (called "liberal
propaganda" or "whining of the liberal media") or is just plain
different (called "any kind of perversion known to man in the name
of enlightenment") processed through Larry comes out as the cause of
all of society's ills including falling arches, low bit rates,
foreign QRM, garblem CW, warts, and incessent rain.

I've learned to tune it out as a sign of ignorance at the mildest
and bigotry at the worst and get on with my worthwhile, enjoyable,
and very moral "liberal" life.

A bloody shame both ways - the Feds play their games, the locals
play theirs, and the kids - including my kids in their time - lose
out. Private schools were no better......they just had different
funding ills.

Maybe if you Republicans would sing it MY way the song could go something
like...
"People. People who need Wouff Hongs are the luckiest people in the world.."
Of course I'd throw in my own Babs melody and claim copyright. Then you'd
have to deal with my lawyers and deal with me, The Divine Diva Of All Times.

I'm just having a little fun also, Kim. Periodic "discussions" with Larry are a great diversion from a boring week. That situation will change this weekend through most of next week and I'll have to reduce my participation in this newsgroup. But, until then, this is a fun distraction.

I noticed you mentioned teachers in another message. If you get a chance, take a trip to your local school sometime. I recently visited several high schools and was impressed with the effort those teachers were putting into their jobs. What was surprising was the behavior of the kids in some classes (not all, some). In some classes, very few were paying attention to anything the teacher said. Instead, they were talking, playing radios, dancing, threatening each other, sleeping, making out (kissing and necking), and so on. They would have never even noticed anything the teacher did to help them learn. I don't see how anyone could possibly learn anything in such an environment.

I talked to several teachers afterwards. According to them, the difference between classes is due to attempts to separate kids that are making an effort from those who are not. In the classes with the better behaved students, the classroom instruction advances at a much quicker rate. In the classes with the kids who are not trying, class size is reduced and the teachers just try to get the kids to absorb anything they're supposed to be learning. Most of those teachers admitted it was nearly a hopeless cause - how do you get kids to learn if they're not at all interested in doing so.

I left with a simply question on my mind - what is causing those kids not to be interested in learning and how can that be changed. If we can answer that, I think 80 to 90 percent of the problem could be solved. And, as mentioned in another message, I suspect the answer lies outside the school system.

Don't be too hard on him, Ryan. Since it's not really clear what he wants to use it for, perhaps he has a reason for wanting to use a television with his computer. Another possibility is that he's been around long enough to remember when televisions were used with the computers of the time and was wondering if that was still possible today.

You beat me by 10 years. I bailed out about four years ago. Mine wasn't a life membership, but you didn't loose much considering what the ARRL has become. Still, I miss the technical articles in QST. Now days the technical articles are probably geared to the new style ham like, how to hook an antenna to a rig, or which side of a microphone you should talk into. I was hoping the ghost of Hiram Percy Maxim was still hanging around ol Newington guiding the League in some small secret way. But the ghost is dead.

Paul, since the only apparent privelege difference in the two proposed
license classes is 50W, and you could operate any amateur frequency in
any mode, why would that deter you from the ARS?

I'll say it again, the person uninvolved with amateur radio won't know the
difference whether it was a sequentially or vanity-requested callsign. The
average person would assume the FCC merely assigned it. (Yes, believe it or
not I actually polled people to see their responses the last time this
bullsh*t came up). There is the root of the problem, if you have such a
pissy feeling towards Kim's (and many other potentially offensive by your
apparent standards) the why don't you spend your efforts whining to the FCC
than wasting your time with posts that will not achieve ANY results other
than to get it off your chest and to hear yourself "bellow" in a "electronic
medium."

> of a Vanity call sign.
>

Once again, if the callsign is so offensive, it is the FCC to blame. Any vanity callsign or even if it even was a sequentially assigned that is deemed offensive is their fault. I should have the right to request ANY callsign that is listed as "available" provided I have the initial right to do so by licensure requirements/benefits. If the list is including some of what you refer to as offensive, that is your problem, and the FCC's, not the rest of us.

Dee,

Well said!

For all those that complain about ARRL, no one has effectively
started an alternative in all these years. I see ARRL as the best
bang for my buck on most matters of amateur issues. I departed from
ARRL position on the code issue and have been a director of
NCI because of that ONE issue. The point is, that NCI, while
a separate org from ARRL, is not trying to replace ARRL's
role in amateur issues EXCEPT on the code/nocode test issue...
and of late, there's less disparity there then 5 years ago.

Cheers,
Bill K2UNK

It's not my place to say who is a "real ham" but my comments were merely responding to what that guy had observed HERE in Usenet, not on the air. And I still stand by my comments, sometimes the newsgroups are nutty as a Snickers bar and sometimes they are not..... Just depends on when ya catch them.

>
> I have been here since I got a computer, way back in 1996. Not much has

Same here, but from around 1999. It goes in cycles. That was the main reason of responding to that guy, stuff goes in cycles on here.... Sometimes some quality posting, sometimes garbage.
>

> Nothing that goes on here happens on the air. Its a good way to vent and
> have fun.
>

Pure BS. These people may or may not operate the same way they act in this newsgroup, but there are a ton that act like complete asses, bringing the amateur radio community "one step closer to extinction" on HF. And this is from an overwhelming amount of these people being licensed anywhere from 25-40 years!!!! (The ones that are supposed to be "better hams.")

I will give to ya, on the venting and having fun part. I do agree with that. My sole purpose for participatin in newsgroups whatsoever is two-fold: recreation and education. Certain newsgroups (other than ham radio related as well) provide for some excellent sources of information.

> In fact I'll bet if you could take a pole you would find most of these
folks

Wow Ryan!

Maybe there is a reason this fellow wants to use a Television as a
monitor. Maybe he is doing a presentation to some people, and needs a
bigger screen. Maybe he wants to play computer games on a big screen TV.
I'm surprised that you have this reaction, after reading previous posts
of yours.

FINALLY !!!!

It's VERY long past time we eliminate this albatross
hanging about the neck of Amateur Radio, known as
CW. Drop the code and increase the required theory
knowledge to pass in order to offset the same. This is
what should be done. If it were up to me, I would no
longer publish the question pools. One should know their
"techcinal stuff" if they hold a licence. I know people that
have Extra's who can't even explain Ohm's Law! This is
NOT acceptable.

Gee, Ryan. If I make a post with my opinion, and you make a post with a different opinion, is that an attempt to control free speech on your part?

Which begs some questions:

What do those people on this list who believe that a person who disagrees with them is trying to deny them their civil rights want? Do you just want to post with only replies that agree with you? Do you want to extend the same to the other persons posts? Are you trying to control them when you post a message disagreeing with their post?

They are by virtue of a member attempting to do so. Either a member is or
is not a representative of the arrl.

They establish policies based on the input of their membership as
> does any other organization. They then carry through on that policy.
> Naturally not every member agrees with it but if we had to have a
unanimous
> consensus nothing would ever get done. And they have no reason or
> obligation to pay any attention to the opinions of non-members.

As well as they should not be representing "non-members" either. The ARRL
is responsible for the state of amateur radio it is today, as they have
convinced the FCC that they are the "only voice."

>
> They do not have nor try to have exclusive control of the whole amateur
> community. Show your proof that they do.

Let me dig up a QST magazine.... said it right on the front cover.....

They establish goals based on
> what their membership wants. That is what any organization does. Again
> they have no reason or obligation to establish their goals based on the

> opinions of non-members.

Only if one chooses to request that information beased upon the decision whether or not to join. Its like going to a car dealership and the car salesperson stating that you will be buying a vehicle, but not tell you anything about it.

>
> You seem to expect them to roll over and adopt YOUR opinion. That's
> unrealistic. Whether you join or not is your business of course. But
> unless you are a member, you have no right to expect to control their
> policies or for them to listen to your opinions and adopt your opinions.
If
> you want to change them, join. If you aren't willing to join, don't
expect
> to change them. That's pretty simple.

Never did I state they should roll over to my opinions exclusively, but my opinions are not singular, there are many more that hold the same position on a variety of issues. If they are claiming control of amateur radio as a whole, not just the membership, then my opinion should count in that respect. I can tell you however, there are alot of the opinions I hold that are held by a ton of people with ham licenses.

>
> I know why I am a member. They can do things that I cannot.
> 1) Take the current BPL situation. They have the finances and facilities
> to do the research that I can't afford. That is but one of many things.

Yeah.... they must be the only one's too eh?

> 2) Product tests/reviews. I can't afford to buy all the test equipment,
> every new radio, antenna, etc and run my own comparisons.
> ... and so on.

Again, CQ magazine does that as well. Granted, I will wholeheartedly admit that QST is a decent magazine, even though it is getting thinner and thinner, but it is a good magazine. My only observation is that it should also include some technical material for the newer hams, as not all of us are Extra class electrical/electronics engineers. Although I am above the "simple circuit" stage, I am however not the highest qualified in the electronics side of this hobby. I am man enough to admit I need to learn more.

Again, You keep saying I should join, but why should I?? List specific reasons, backed by facts. Not vague generalities or
"big-brother/mafioso-like" reasons? All it is, is a very expensive magazine subscription, so let's
not kid ourselves. If there are some actual reasons listed, I might consider joining. If not, then that sums it up pretty good.

I can honestly say that you are one of the few people that I have met on here, and I like you as a person. But there is one thing as a fact I know

for sure, we will never agree on is the ARRL. I do not take the ARRL as blind faith, or like a religion. I do not put the ARRL in a position close to god as some put here and elsewhere. I do not consider the arrl like a religion or a church organization as some people equate it to. I will be one of the first people to join if there ever becomes a group like the United States Amateur Radio Association or the National Radio Relay League or any other similar group. (don't know if either of those exist.....) The arrl needs the competition to keep them in check. Hell, Republicrats claim competition is a GOOD thing. (except when it encroaches on "their" businesses.)

Have a great Labor Day Weekend!

I hope that everyone here has a fun and enjoyable and most importantly, a safe Labor Day holiday weekend. I myself will be participating in both the amateur radio safety activities (Carebreaks) and also working the "Boot Drive" with my fire department collecting money for the MDA. Last year we did over 2500 bucks for them doing only one day. We are doing from Friday thru Monday and hope to raise over 5,000 bucks!!!!!!

Spread-spectrum is highly resistant to narrowband interference. BPL
develops wideband interference. What the military depends on is the
physics that any remote jammer trying to create wideband noise would need
to be immensely powerful, because a wide band of loud-at-a-distance noise
would have to have substantial energy at every frequency. BPL defeats
this by putting the transmitting antenna very near the receiver, so the
noise source need not be powerful to be loud at every frequency.

Although I do not agree with you on the code issue, I do commend you for going out and DOING something rather than sitting back and whining as so many are prone to do. Not only did you join an organization that supported your point of view but you obviously became actively involved since you are one of the directors. I would suspect, however, that you are still a member of the ARRL even though you disagreed on one issue. i.e. You did not expect the ARRL to be a single issue organization.

So what?

Here is an idea. Why don't you and the other people who know what we should be discussing make up an agenda and guide the group to better days?

Don't like Morse code issues? Don't get involved in them. Post what you consider relevent, make the group look what it should look like. If you are right, other hams of the proper mind-set will come here and participate. Then the PCTA's will just be part of the noise floor, just like any other newsgroup has. You can't hope for any better than that.

That's what I'd expect. But I don't know if the BPL system will dirty enough, or close enough to significantly interfere with military communications. I suppose the military has sent people out to take readings like Ed Hare did. Anyway, I'm thinking the biggest threat to BPL isn't outside opposition, but the spikey wideband trash normally found on power lines.

That's it! BPL is a wives' conspiracy to get their husbands to start vacuuming the freakin' carpet!

For the same reason that the army doesn't let you "test" directly to
First Sargent from Recruit.

My proposal gives FULL privileges at very modest (but not QRP) power
levels so that a newcomer can learn the ropes right alongside
experienced operators, but at power levels which are safer and also
less likely to trash the band if they overdrive, mistune, or run
defective gear, or make other "newbie" mistakes.

This bears notice --- my proposal doesn't "ghetto-ize" the newcomer to
a few little slices of the band like the current Novice/Tech+
allocations, so the "lack of appeal" isn't restricted operating
privileges, but only a modest power level (and the requirement to
upgrade within 10 years).

My take is that the child has to be raised with an expectation that he
or she will indeed do well in school. Many are not raised this way.
Appreciation for the sciences, appreciation for learning and hard work,
all that good stuff.

Diminishing emphasis on "self-esteem" would be a great idea.
Self-esteem should be something earned. One of the strangest things I have seen lately is the bizzare students who have a great sense of self-esteem with absolutely no reason for it. No accomplishments, no education, nothing but feeling really, really good about themselves.

We also have to remember that Students are individuals and mature at different rates. I know many students who seemd to undergo a miraculous change at some point in high school, going from slacker to achiever almost overnight. My own kid underwent such a change right after he got a steady girlfriend, his grades improved, and his whole H.S. experience changed right around, because he started to get a future looking perspective.

Oh, yeah. Get the kids thinking about something other than what's happening 5 minutes from now.

Re. RM-10787

To whom it may concern:

Undoubtedly, there will be many comments filed re. this petition.
Therefore, I will be brief and to the point. Although I am not new to
radio and earned my GROL long before my amateur radio license, I am a
relative newcomer to amateur radio. As such, I feel that I can offer
an alternative view to many of the "old timers."

I believe that there is still a very important place for minimal Morse
code proficiency testing in U.S. amateur radio licensing. I've been
told that "proficiency" is the technically correct term, however, I do
not feel 5-wpm represents Morse proficiency. I feel that the current
5-wpm Element 1 test is sufficient to require an individual to learn
the Morse characters so that s/he may then make an educated decision
as to whether or not s/he wishes to pursue CW further.

I would like to dispel two myths that I have repeatedly heard/read in
the argument for dropping Element 1:

ï¿½ The current Element 1 test acts as a filter to keep out Cbers and
other "insufficiently-dedicated" individuals.
ï¿½ The current Element 1 test acts as a deterrent to newcomers to the
hobby/service.

Along with being an amateur radio "newbie," I am also a Cber and
Element 1 did not deter me in any way, shape, or form from upgrading

my license class and earning HF privileges. If during the course of reviewing the comments filed re. RM-10787, this demographic is referred to while supporting the removal of Element 1, please do not include me. This "newbie" wholeheartedly supports the retention of Element 1 testing for the General and Extra license class licenses.

In closing, I would also like to remind those who believe that Morse code testing serves no "regulatory purpose" in amateur radio that there is an intangible quality at stake here too. It is part of our culture and tradition and therefore should not be removed from the curriculum.

Thank you for your time and attention.

Sincerely,

Egbert C. Craig, Jr.

Sounds good to me. Your proposal was a lot more intelligently written
than mine.

And just an FYI, I've worked all continents on PSK31 with less than 50w
output, so it's not going to seriously handicap an operator. In fact,
it'll probably teach them to operate better because they won't have
higher power to compensate for inexperience.

> This bears notice --- my proposal doesn't "ghetto-ize" the newcomer to

I like it, and the beauty of it is that the NCVEC proposal, if adopted,
doesn't preclude this kind of modification later.

Overall not bad Hans although I don't agree with the two year
apprenticeship, I think one year would be adequate. The one year
"statute of limitations" certainly worked for us early 75W Novices and
many of us were fully up to speed in much less than a year.

You mean a drivers license? I was a motorcycle enthusiast for years
before I had a license. And I need no license to put together a hotrod
or antique car. When I was a youngster, I drove a friend to the local

drag strip so he could race his car, even though his license was suspended. After he got it back, I went back to being a passenger.

I'm sitting here listening to our local Echolink repeater.
Someone,apparently in Florida, is Kerchunking our local repeater.

Now THAT is the true power of the internet!

And yesterday at lunchtime, I heard some talk that you should never hear on ham radio. Somone with a funky drunky accent going on about his favorite parts of another guy's anatomy. Shudderrrr.

There just isn't enough control of all the repeaters linked into Echolink for it to be a viable system.

Echolink isn't too blame for the incidents you describe.

Control operators are responsible to shut down their machines or
amptutate the offending user when such violatons occur.

Don't blame technology for the failings of those who implement it.

Both of the problems you describe are independent of the fact that
Echolink happens to be involved.

Whatever the phuck "apologistic" means..... you blame Echolink
technology for the blatant rules violations of some jerkoff who happens
to be using it????

If some jerkoff violates the rules on CW do you blame Morse code???

I used to wonder if you were as backward as you seem. I don't wonder
anymore.

With all kind wishes,

If you hear things on Echolink you dislike, get over it, ignore it, and move on. Echolink is not "real" Amateur radio anyway...it is merely a glorified, huge chat room for those with Amateur radio licenses.
REAL Amateur radio is accomplished by using radios and antennas, not computers and phone lines.

Same silly crap about Packet when it was passing 'strange' traffic. What
was done? Nothing.

You know whats really funny? All this talk about 14.313. Apparantly put
forth by those that have NO RECEIVERS. Or are totally stupid.

The activity on 313 has been seriously reduced. Almost to the point of non
activity.

So what exactly is the point here? What IS the problem with 313???

However, if you are talking about Donnie Dumbass....I agree.

Of course I blame the perps. But I still get an idea of what the neighborhood is like when I hear them there.

You want to go there, that's just fine. I'll pass.

And as far as techno-bigotry goes, Echolink isn't very high on the techno-scale.

Know why he won't? He kept alluding to the fact that he was going to, or kept inspiring others to do it. So, I wrote. I wrote knowing that Riley would more than likely be the kind of person who probably doesn't appreciate the humor in my callsign, but also knowing that he upholds to the principles of a democracy. And, he did exactly that. He does not like my callsign. But, he doesn't believe it is for the FCC to govern such things.

It's not offensive, in any way. Larry just doesn't like a woman who can think for herself, ergo he doesn't like anything about me. That's all it is. He has no problem at all with my callsign. How could anyone as offensive, crude, rude and belligerent as him have a problem with this callsign?

I really didn't think of you as being so high up that a point could so easily fly over you.

It *IS* the operators that I lament, Hans. The very same operators you so sincerely wish to gather to ham radio en masse.

>
> I used to wonder if you were as backward as you seem. I don't wonder

160 thru 10, 6M, 2M, 440, a little microwave (very little!), and I
dabble around with a lowfer beacon during the winter (not really a ham
band, I guess).

> 3. How frequently do you operate on those bands in Question 2?? Hourly,
> Daily, Weekly etc.

Varies with the season. Pretty quiet in the summer, very active in
fall/winter contest season, and daily/weekly during the spring until
fishing opener.

Kim:

One's opinion of what is "intellectual" and "logical" depends on their
own ability to process those concepts. You have consistently demonstrated
a surprising lack of ability in that particular arena. Therefore, your
evaluations are irrelevant and to be ignored.

>just what was issued) had the last letters DTA. He had a T shirt
>made for her that gave the call across the chest with the
>phonetics, "Don't Touch Anything".

Well, such a call sign is not offensive on it's face. The problem
with Kim's call is that it is both offensive and "in your face." Any
self-respecting YL who may have been issued a call with the "TIT"
suffix on a sequential basis would have to immediately request
a re-issue. Otherwise, if she voluntarily chose to keep it, then
she would be just as guilty as Kim is for having it.

My intention is hardly to "dominate" Kim or any other woman, Dwight. However, I'm curious as to why that thought occurred to you! In reality, Kim's call sign tends to encourage men to think of her in that way, but, then again, that's undoubtedly her intent. Not the kind of behavior I would expect from a married woman and/or a mother, assuming she has any children.

Like all men, I have a very deep appreciation for the female body, and I enjoy the image of an attractive woman as much as anyone else. However, I also have very traditional moral values, and know that the proper place

for such demonstrations of sexuality should be confined to the private lives of committed, monogamous intimate partners. If you think that sounds hopelessly old-fashioned, then thank you, very much!

Dan:

The problem with Kim is the fact that, like all who follow the popular
culture, she associates "adult" behavior with sexualized behavior. I'm
certainly no prude, but I know that there is a time and place for
everything, and family-oriented activities like amateur radio deserve to
be free from encounters with an "in your face" flaunting of sexuality,
which is what Kim's call sign represents. And yes, it is nothing more
than a sophomoric attempt on her part to call attention to herself in
a manner which I'm sure she thinks is "funny" or "cute," but in reality,
just drags all of us hams "...one step closer to extinction."

>Man, you got that right.

Any adult who is attempting to introduce a child to the wonderful world of
amateur radio should properly expect to find an atmosphere which would
not require them to "have a discussion of human sexuality." Moreover, I'm
certain that outside of this newsgroup, you would find more agreement with
that statement than anything you've offered on the subject so far.

Kim:

Once again, you provide conclusive evidence that your mind is intent on
creating a sexualized atmosphere during normal, polite social interchange.
This is what I call the "MTV Mindset." Our popular culture is based on the
philosophy that everything that can be sexualized MUST be, and your
callsign is sending that message loud and clear.

>medium."

I can't say I disagree with you here, Ryan. However, it is HERE that Kim
started on her campaign to trash up the image of the ARS, and it will be
here that I continue to keep the heat turned up under her feet. On the slight
chance that she may throw in the towel and change her callsign, I could then
take credit for saving her personal image and that of the ARS.

>> Throughout my adult life, I've been told that "perception is reality."

>> criticism of those of us who *are* offended and *do* object to her choice

>> of a Vanity call sign.
>>
>
>Once again, if the callsign is so offensive, it is the FCC to blame.

Not really. The FCC is a government bureaucracy which must comply with
the demands placed on it by it's liberal, politically-appointed leaders. They
simply cannot impose any kind of "judgment" upon radio amateurs with
regard to call sign selection, since to do so would imply that there are, in
fact, moral absolutes...and that's one thing the government, which cannot
even permit a display of the Ten Commandments in a public building, just
isn't going to do these days. More's the pity.

>Any
>vanity callsign or even if it even was a sequentially assigned that is
>deemed offensive is their fault.

Yes on the sequential assignments, a definite no on the vanity calls.
A Vanity call sign is self-selected by it's recipient; the FCC, as stated
above, is not going to interfere.

>I should have the right to request ANY
>callsign that is listed as "available" provided I have the initial right to
>do so by licensure requirements/benefits.

I totally agree. Moreover, I would add that you have the responsibility to
make your selection one which is acceptable and not damaging to the
image of the ARS. Kim deliberately and willfully violated that concept
for the purpose of being able to flaunt a vulgar, "in your face," expression
of her "individuality."

>If the list is including some of
>what you refer to as offensive, that is your problem, and the FCC's, not the
>rest of us.

No, it is the "problem" of everyone who seeks to uphold some semblance of
traditional moral values in our society.

Which is exactly what Kim exhibited when she chose that callsign. It says far more about her than it ever could about ham radio. The only real damage she does to ham radio is as an embarassment.

Ham radio started going into the toilet shortly
after Dick Bash published his infamous "study
guides". Later after the ARRL went crying to the
FCC to publish the question pools (to put Dick Bash
out of business because *his books* were out-selling
the ARRL study guides 10 to 1 at hamfests and mail
order) it sealed the "initial cycle of dumbing down" for
Amateur Radio - and we are now where we are today
as a DIRECT result of the same.

All because *one ham* in Alaska managed to singlehandedly
'step on the proverbial toes of a publishing company' in Newington
Conn. and in their response, they decided to not only throw out
the baby with the bathwater, but also rip the tub out of the wall
and toss it out the 2nd story window...

These are the true facts of the matter.

That's very sweet but exactly what does it have to do with shortwave
/listening/?

A lot of hams seem to think that SWLers are - automatically - interested in
ham stuff.

I doubt that the hams that crosspost into rec.radio.shortwave realize how
badly they make hams look.

I don't know about that, but I do know that echolink is set up perfectly for identity theft.

It gives CB'ers, FRS enthusiasts, freebanders and those who are merely curious a chance to "join in" the fun of amateur radio without investing in radio equipment or having to study for a liscense.

One web-site had the echolink info conveniently located next to a "callbook" database, for the convenience of those who might need to pick out a callsign so that they can participate.

Just for fun: Try to "Google" "freeband echolink". Lots of interesting links there.

It doesn't take a rocket-scientist to figure out that if you set up "radioless ham radio", it's not going to be particularly good for the hobby.

It doesn't matter whether you are pretending to be using ham radio over the telephone, the Internet, or over those lousy PA systems they have at the hamburger joint's drive-through.... Any way you look at it, the real hams do not have a need to pretend. They just get on the radio.

You seem to have several "proposals". How did you decide on this latest one?

> The "Class B" license would have an entry-level test (basic
> regulations, safety, operating procedures, basic DC and AC
> electronics). This class would have full frequency and
> mode privileges, power limited to 50W output.

> The "Class A" license test would be of a difficulty level
> similar to the current Extra class test, and would have
> full privileges at power levels up to 1500W, equivalent to
> current Extra Class license holders.

The only difference is power levels? Thats about as absurd as having an
isolated mode test, like CW. In both cases, the testing does not represent the
priveledges granted. Here, you are tested in many areas, and only recieve
higher power levels as a result of being tested in those areas.

>Holders of this license would be required to have 2 years
> experience as a licensee (“time in grade”) before being
> eligible to upgrade to “Class A”.

This is just wrong. Why should someone arbitrarily be held back two years,
regardless of their abilities? For example, someone may have the ability from
commercial and/or academic experience, or throught their own efforts. Such
persons would have the knowledge to be useful right away, but would not be able
to upgrade because they would have to wait two years.

>From: wa2si@arrl.net (Bert Craig)

>It is part of our

Amateur radio is a technical hobby, not a hobby to maintain "culture and
tradition".

Hans, its quite easy to "get it" when the subject makes sense. Its
all the other nonsensical stuff on here that I don't get.

Paul gave an opinion that I didn't understand, so I asked a question.

Perhaps Paul requires "Extra right out of the box" and cannot be
bothered with "lesser" licenses. Until he replies, we'll never know.

Jon Cunningham is ham radio operator K1TP, and he has had his 14.313
MHz web pages up for quite a long time at http://members.aol.com/jcunham.

On them, he frequently put down Usenet radio posters as beneath contempt,
but he completely overlooked his own tendency of late to post what
many people would think of as porn or links to porn. I guess that AOL
decided to nuke the pages for that same reason.

Truly, pride goeth before a fall ...

>Did anyone ever get caught showing up say a week early for retest?
> Today you'd
>have computers that could spot it, but back in the old days did they
>bother to check?

I dunno but I bet they did. FCC field offices were usually far enough apart
that you would be going back to the same office, and they could check.

Also, FCC main office processed the 610s, whether you passed or not. They could
easily check if you were still in the waiting period, too.

I don't know anybody who tried to push the retest anyway. The 610, which you
signed, contained a question or statement where you indicated that you met the
various requirements, including such things as not being in the waiting period.
FCC could pull your license for playing games like that. Signing the 610 meant
you agreed to obey ALL the FCC rules, not just some of them or most of them.

I think the real deterrent to stuff like that was the simple fact that in most
hams' minds, cheating on the rules was "simply not done". That doesn't mean
nobody did, just that it was rare.

Why was there a 30 day waiting period? Several reasons:

- it kept people from memorizing the test (FCC did not have that many different
writtens) and helped keep the tests secret

- it encouraged people to be really, really, REALLY ready for the test.
Particularly those lucky enough to live close to an FCC office.

- it reduced the workload of FCC examiners, particularly when the tests were
free.

>It's VERY long past time we eliminate this albatross
>hanging about the neck of Amateur Radio, known as
>CW.

Do you mean the MODE or the TEST?

>Drop the code

If you mean the code TEST, there's a very good possibility the last remaining vestige of code testing will be eliminated by FCC.

>and increase the required theory
>knowledge to pass in order to offset the same.

I doubt very much that will happen, even though many if not most hams support such a change. Look at the restructuring of 2000 - both code and written tests were reduced dramatically.

>This is
>what should be done. If it were up to me, I would no
>longer publish the question pools.

But it's not up to you. It's up to the FCC, and the only way for the Q&A to be kept secret is for FCC to take over testing and test generation again. How can anyone convince FCC to spend the money and personnel needed to do so after 20+ years of the VEC and QPC systems?

>One should know their
>"techcinal stuff" if they hold a licence. I know people that
>have Extra's who can't even explain Ohm's Law! This is
>NOT acceptable.

Sure. But how to convince FCC that said knowledge is necessary? Look at the enforcement issues FCC deals with in the ARS: failure to ID, cussing, uncoordinated repeaters, jamming....does knowing Ohm's Law (or Morse Code, for that matter) have anything to do with those violations, or preventing them?

ARINC *has* filed comments. Apparently, one of their receive sites
near San Francisco was severely affected by some Part 15 equipment in
a house nearby. One of their 3 MHz frequencies was rendered unusable.

The NTIA will step up to bat for the military and government HF users.

Take care,

Dave

The term "handle" goes back to before ham radio. It was commonly use
by hams as an alternative to "name" or "nickname", because often a
"handle" was not related to the person's actual name ("Slim", "The
Duke", etc.) Just a bit of jargon.

And originally the cb term meant the same thing. But over time,
"handle" in cb lingo came to mean something quite different from a
person's name or nickname.
"Handles" were used instead of callsigns as a way of concealing a cb
user's true identity, both from others and the FCC. Thus, they became
the antithesis of callsigns.

And that's why the term has dropped from amateur usage.

Thanks for setting the record straight Jim. What these CBers can't get straight is that Amateur Radio pre-dates CB radio by many decades. So most, to all, of what CB does is a copy of Ham radio, which the CBers then proceeded to screw up.

Just another example of how CB has, and is ruining ham radio.

Yeah. And I know that if I use Echolink on my PC here in NJ USA to
connect to a machine say in Romania, that my voice is being transmitted
on some 2m or 440 freq over there. I just happen to be using a very long
microphone cable..... I've had QSOs with hams in Japan who were mobile.
Guys suprized to hear an American white trash voice on their local
repeater. :-)

Mostly HF, some 80m, 5Mhz, 40m, 20m (favorite band) and a little 10m.
I need a
better antenna for 80 and 5. Haven't been above 50MHz much at all since I
got my "extra lite"....

For myself a few weeks can pass between operating sessions, and then spend
a few hours on the radio (like a contest. I don't compete, but use them
for seeing
how far and what places I can ping).

Hmm ... this makes twice now for me. Once VE7DGL had to get hold of me and used Echo Link - and my HT fired up and I got the needed "heads up". Today, I needed to get hold of Hatton, NI5Y, and he wasn't on the internet. Well, I linked to his machine and he answered via his HT. It does work. There were radios on one end in both instances. :)

Or is DXCC the only thing that counts? I have little use for those folks. I'm sure some are decent, but the one time I wanted to run a phone patch from the US Naval Hospital on Guam and the DX boys thought phone patches shouldn't be allowed on their day ... well ... as I said, I've little use for 'em.

I was right. AOL *did* have a word with K1TP. From his web page at
the time of this posting (and I quote):

"New Location of As The World Turns.....courtesy of the AOL
police ..." [location snipped]

And Jon has moved so that he can continue to post his drek without
interference.

So "pfhbbblttt!!!!!!!!!!" right back at you, Numbnuts.

Les, Dan and the other ignoramuses could of course be expected to
shoot from the hip and be wrong (as usual). They are sooooo
predictable.

Hmmmm... Let's put on our thinking caps for a moment, and consider whether there is generally more access to ham rigs, or to Internet capable computers. Which one is easiest and cheapest for potential bootleggers to obtain access to?

Same difference? I don't think so. Echolink is the best thing to happen to bootleggers - ever.

If I were to go where freebander types hang out and leave an informative article about EchoLink, that would be an irresponsible act... It would be irresponsible for me to point out that vulnerability within the hobby, but not nearly so irresponsible as the programmer who created that vulnerability in the first place.

In this day and age, amateurs are more, not less conscious of security issues. EchoLink is a big hole in our security, and most especially should never be utilized for anything even remotely related to emergency communications. As hams, what we have to bring to the table here is independent radio communications. The department of homeland security did not affiliate with the ARRL because of our ability to use the Internet.

One basic of emergency communications is not to develop a dependence on the network that you are there to back up. Using the Internet as a central part of a Ham Radio network (of any type) is like having a plan to use the telephone to report outages in telephone service. The emergency plan works great - until there is an emergency.

Add that to the hundreds, perhaps thousands of hams who instantly gave up on learning more about ham radio in order to upgrade upon discovering EchoLink, and you begin to understand whether EchoLink has had a positive or negative influence upon the hobby.

Sure, lots of hams have enjoyed EchoLink... Lots of drivers would enjoy free six-packs of beer at highway tool-booths too, but that doesn't mean it is a responsible or intelligent thing to do.

I don't know about you, but unless I'm contesting, I usually look up the callsign. And plenty of others do too. So Mr. Pirate won't go undetected for long. Perhaps Echolink will be the same, perhaps not.

And even though I have tried to look into Echolink with an open mind,
in the end, I just don't think of it as a ham type sport - except for
those that just want to talk. And I'm more into the hobby to build
things, contest, and try to stretch my radio legs - not just talk.

The methodology is really pretty simple, an internet version of a phone patch.

The ho-hum aspect as I see it is that allowing an HT to patch into the internet is analogous to simply using a telephone. Others may differ, thinking this is some high tech thing to add to the ham arsenal.

In fact, it seems to me that an application would be to allow cell phone users to call a number, patch into the net, and then speak to hams. And since people can bootleg a number so easily, I wouldn't be

surprised if this isn't already happening.

> or antique car.

True...and you don't need a license to build a ham radio either.

The "operation" of either (hot rod, motorcycle, antique car
or ham radio) all require a license to operate.

> When I was a youngster, I drove a friend to the local
> drag strip so he could race his car, even though his license was
> suspended. After he got it back, I went back to being a passenger.

I can't say all racing requires a license, but most do. I too did some
drag racing in my youth and no one ever asked to see my
license...of course no one ever asked me to see my ham
license either :-)

Cheers,
Bill K2UNK

100% correct. Indeed, I am and have been a volunteer in the ARRL
field organization for several years now serving as a "local Gov't liaison"
on matters of local (i.e. country, city, town) ordinances and laws
which do or may impact hams.

Cheers,
Bill K2UNK

Jon Cunningham is ham radio operator K1TP, and he has had his 14.313
MHz web pages up for quite a long time at http://members.aol.com/jcunham.

On them, he frequently put down Usenet radio posters as beneath contempt,
but he completely overlooked his own tendency of late to post what
many people would think of as porn or links to porn. I guess that AOL
decided to nuke the pages for that same reason.

Truly, pride goeth before a fall ...

>
>With all kind wishes,
>
>de Hans, K0HB

Hansl:

The gun control crowd want to ban handguns (and all other types of firearms, for that matter) because they realize that tens of millions of law-abiding gun owners serve as a very strong deterrent to violent crime, and thus make the average American less dependent on government for their basic security. Armed citizens effectively employ firearms to stop or prevent violent crime over two million times each year, yet the liberal media never reports this fact. The liberal, socialist Democrat ideology depends on our society being essentially broken and wholly dependent on government services, in order to assure the job security of liberal, socialist government bureaucrats, social workers, and most other highly-paid civil servants. They also know that an armed citizenry has the ability to resist government tyranny in the most effective manner possible -- with deadly force. They can't have that, and must abolish that concept any way they can in order to guarantee their own futures. The "technology" of firearms will always be available to criminals -- just take a close look at what is happening in the U.K., Australia, and anywhere else where civil disarmament has been achieved. Violent crime, including gun crime, is increasing, and non-violent property-based crime is off the charts.

Kim:

That is quite correct, it's nice to see you finally get something right. The
FCC should not be in the business of controlling which call signs any ham
can or cannot have. That is, and always should be, entirely up to the good
taste and judgment of the individual ham. In your case, you have
demonstrated neither good taste nor good judgment. That's why you're
doing the carpet dance.

Just for fun, I did. Results below. Maybe I used the wrong Google?

73, Hans

Your search - "freeband echolink" - did not match any documents.

Suggestions:
- Make sure all words are spelled correctly.
- Try different keywords.
- Try more general keywords.
Also, you can try Google Answers for expert help with your search.

I missed your first message asking "why would that deter you from the ARS?"
Sorry.

Being new to all this (licensed in October of 2001), it is easy for me to
remember my thoughts and feelings prior to being licensed. Here is why it
would have deterred me:
1) Seeing "real" hams being able to run 1500 watts while only being able
to run 50 watts. I would have KNOWN (it doesn't have to be true, I still
would have KNOWN it) that I never would have been able to make a contact.
2) Being treated as a second class citizen -- the Rookie League is not a
fun place to be
3) Basic congenital problem with Time-In-Grade approach. (Please note, I
would not have had a problem with serious theory/operating practice tests as
opposed to the actual Elements 2,3, and 4. I won't have passed them all, I
am sure, but I would not have had a problem with approach.).

Of the above, number 3 would have been the most important to me, I think.
Now that I am licensed, I seldom put out more than 75 watts. Yes, I have an
amplifier, but I checked my log and see that I haven't had it on since early
June (honest). So, experience has showed me how silly 1) above is -- that
does not, however, change how I felt in my pre-licensed days.

I am sure that I am an odd duck -- I never even heard a QSO until after I was licensed (the purest Extra Lite in captivity).

I can understand and accept people thinking that anyone as ignorant as me should not have been granted full privileges. At no time did I say that I DESERVED such privileges -- only that the suggested two class system would have deterred me from entering this great hobby -- perhaps rightly so.

As a purely practical matter, if an approach similar to yours came into existence, I would suggest a 100 watt limit rather than 50 watts. Given that the vast majority of modern transceivers run 100 watts output, enforcing a 50 watt maximum would be problematical at best.

While I personally am not really interested in Echolink, I think it is an
interesting hybrid. I'm glad that someone worked out the methodology
whether or not I ever make any use of it.

Dee D. Flint, N8UZE

Yes, it is an interesting mode, but only one of passing amusement.
When inclement WX hits and the phone lines are down it will be back to Ham
Radio the way it always has been. Good old radios and antennas....and for
those with preplannning a Marine battery or two as well.

Yes...but you still used your computer and the land lines.....

I guess it beats using the HF rig and a tuner.....easier this way.
Kinda like CB, eh?

Probably just don't know how to use it. My ten-year old son just managed it
just fine. Perhaps you should try again.

I just managed to duplicate your results. Hans. I had to leave the quotes
around the two words, in order to get it to mess up.

Hans, you appear to disagree with my post about echolink, but you do not offer any counterpoint to the arguements I made... Instead, you seem to be going into "insult and mindless nit-pick" mode. You decided to Troll.

In the future, when you respond to rational, reasonable arguement with a kindergarten level response, I will ignore you, and just figure that you have no arguement. That's pretty well the case here, isn't it Hans?

I tried AOHELL for awhile due to one of their promotions. It wasn't that
great. However, the real problem came when I discontinued service. It took
6 MONTHS to get the billing stopped and corrected after I canceled.

>
> And that's why the term has dropped from amateur usage.

Not entirely. I picked up the habit of using "handle is Brian" back
when a number of spot 10M AM freqs were functionally the equivalent of
today's neighborhood 2M FM reperaters and I still use it. It's just
ingrained reflex from 'Wayback days and I've never gotten any
"feedback" about it.

As you point out the big difference between ham usage of the term
"handle" and CB usage of the term is in the handle itself. "My handle
is Brian" is obviously my legitimate given name. "The handle here is
Road Snake" is another whole pure CB ballgame.

In defense of the CBers ever since the FCC dropped CB licensing CBers
they don't get FCC callsigns so they can't use 'em like we can ours
even if they wanted to. 'Cept in the case of us 'Wayback licensed
CBers who do have FCC issued callsigns. On those very rare occasions
when I get on 27 Mhz you'd hear "This is KLK 1937, the handle is
Brian" . . . Works fine.

In article <BB72E3D6.24CF9%stewartx@earthlinkNOSPAM.net>, Dwight Stewart <stewartx@earthlinkNOSPAM.net> writes:

>I do agree there is a problem that must be addressed. But, sadly, I >suspect the root of the problem lies mainly outside the school system.

Agreed!

>Television jumps immediately to mind. Television has fed children an almost >continuous message over the last few decades that smart kids are nerds and >dumb kids are cool. With that in mind, there is little reason for kids to >make any real effort in school.

Agreed, and there's more. In general, commercial boradcast TV portrays the following:

- All sorts of conflicts can be resolved, and goals reached, in less than an hour or half-hour.

- 'Dad' is usually loud, outspoken, immature, mistaken, and exercises amazingly poor judgement. But he's lovable and always forgiven. 'Mom' is quieter, stronger, the solver of problems and 'forgiver' of 'Dad'. The 'kids' (when present) are a mixture of the two.

- People of all kinds live in spacious, clean, well-organized homes, yet rarely does anyone need to actually DO anything to keep them that way, or pay for them.

- (This is my favorite) NOBODY *on* TV spends much time actually *watching* TV. Particularly children.

--

One real problem with TV is that it is so totally passive. It requires very little besides one's attention.

>And, since Americans seem to prefer the >television industry's freedoms over better educated children, the problem >may never go away.

Driven by the almighty dollar. I recall that when we were kids, there were all sorts of things that would not be shown on TV. Some of it was ludicrous - we were supposed to believe that Rob and Laura Petrie slept in twin beds? But a lot was geared to make TV G-rated.

Cable TV broke those taboos in the '70s by arguing that since cable was not broadcast and you paid to have it in your home, you retained control. But then broadcast TV copied cable as much as possible to remain "competitive".

Was all this "smart' or "dumb"?

>Conn. and in their response, they decided to not only throw out
>the baby with the bathwater, but also rip the tub out of the wall
>and toss it out the 2nd story window...

Alaska?

What was this ham's call?

>These are the true facts of the matter.

References?

The facts that I have seen documented are these:

1) In the 1970s, Mr. Bash gathered information by asking people who had just taken ham exams to tell him what they remembered. By doing this over time and with many people, he was able to reconstruct a close facsimile the actual then-current FCC exams without ever seeing them or copying them.

2) FCC was aware of Bash's activities and methods but chose, wt the highest levels, not to prosecute him.

3) Some prospective hams bought "Bash books" because they perceived it to be an easier way to pass the written tests.

4) In the early 1980s, (about a decade after the appearance of the first Bash books) FCC created the VEC and QPC systems, and turned over testing for amateur licenses to them. This was done primarily to save FCC money and time, because they could get volunteer hams to do work previously done by paid FCC personnel.

5) The VE fees collected go to pay for expenses (postage, duplication, facility rental, etc.).

>Which version of AOL are you using? 5.0 here.

7.0 here. I really liked 6.0 but it is not friendly with the network environment here (Win95 machine and WinXP machine networked through a crossover cable) so it was 7.0 to get things working.

The problem was not in my computer, because other screen names worked perfectly and only one of my 3 screen names had the problem.

All fixed now, tnx AOL.

>Just ordered a hot

Dave Barry's Book of Bad Songs comes to mind....

>> Actually, I don't think that people ae dumbed down
>> compared to whatever mythical time that they were
>> "smart".

There are many different kinds of intelligence. And education. For me, the fundamental questions is something like: Is the person/activity/education/institution productive or destructive? (IOW, does it help people or hurt them?)

> I agree. Every generation has had it's moments - both good and bad.

And the term "generation" is deceiving. At the same time the above sillinesses were commonplace, others of the same "generation" were doing great things.

>> BUT! the individual tests can be "smartened" or
>> "dumbed". All that is up to us. We decide.

To a certain extent. Nobody has yet come up with a way to convince FCC to go back to doing the testing themselves. In fact, all suggestions to improve the writtens were rejected by FCC back in 1999.

We can submit more and more questions to FCC for the question pools, but FCC retains the right to dump those it doesn't like.

Which FCC did because the cb users were not using callsigns for the most part anyway, long before the rules changed. "Handles" rather than callsigns were common with a significant part of the cb crowd around here well before 1970.

Smart or dumb. Likely as not, that cannot be answered so succinctly. I think to some degree the type of programming available today far exceeds what is needed. For example, how much reality TV do we really "need"? BUT, the primary responsibility for what happens in the home is still the family--right?

For the politics of it all, I like that, at least so far (and that comment belies another discussion altogether) we live in a country where "anything" goes. But with that comes the responsibility of family and, beyond that, community. I think society in a transitional phase, where everyone is beginning to realize that we all have a responsibility to help see that our youth are raised with good attitudes, strong independence, and a willingness to recognize and overcome challenges, rather than to succumb to them. In the home, in schools, and in our civic and religious organizations, we all come together and decide--collectively--how best to do that. Of course, this isn't as obvious as it seems, but I think it happens by "osmosis."

It always makes me nervous when we start disliking the media around us enough to support, indeed call for, its censorship--in any form or another. I'd rather have the capability to decide for myself, my family, and my community, what is OK and what we need to use to learn from.

What was acceptable yesteryear is the norm today and, to some degree, that is OK. I shudder to think that women would be put back into a time when they weren't allowed the commonality with men as they are today. And, after all, the media helped aid in the progress for women. I shudder to think of a time when Ozzie and Harriet (parents who were so blind they couldn't see their children behind their backs) were considered the norm for family life.

Today, we deal with each other on real levels and parents recognize that--darn it all--kids for the most part are going to be tempted to the unthinkable. We don't need TV to teach us that, it is a reality.

For an extreme, take the example of the movie (if we can call it that) "Jackass." I never heard of this MTV show until the movie came out. While I was horrified to see some of the things this crew of folk get themselves into; it seems that it's hard to turn off or "put down." I like that this is available--politically speaking--and, it would be completely forbidden in my home if I'd had small children. To know that it's there and to know that some youth may be influenced to believe that things like that are OK, is the tool by which we learn to teach. MTV did not make people like that--they are out there. Without the exposure of the show, we'd never know it, right? It's always hard to debate in print--but hopefully you'll get what it is I'm trying to interpret.

Smart or dumb. Both. But it's all about capability to me. I like flexibility. I would not want the alternative: someone or something making the decisions as to smart or dumb.

Computer Guys:
I have an obvious trojan on my system.
Win98. All the latest security updates.
Even when my system is "desktop" with all inet stuff off,
it keeps pinging my DSL connection about once a second.
The latest Norton update,
Ad-Aware 6, Trojan scan etc. don't find it.
Nothing unusual in my RUN folders in the registry.
Nothing unusual in the "alt-ctl-del" window.

Is there a utility somewhere that can show me what
the heck program is running this ping, so I can kill it??
Please reply off the list if you can help.
Thanks, Dave S.

One of my favorite songs when I was a teen-ager is Pleasant Valley Sunday:

The local rock group down the street
Is trying hard to learn their song
Seranade the weekend squire, who just came out to mow his lawn

Another Pleasant Valley Sunday
Charcoal burning everywhere
Rows of houses that are all the same
And no one seems to care

See Mrs. Gray she's proud today because her roses are in bloom
Mr. Green he's so serene, He's got a t.v. in every room

Another Pleasant Valley Sunday
Here in status symbol land
Mothers complain about how hard life is
And the kids just don't understand

Creature comfort goals
They only numb my soul and make it hard for me to see
My thoughts all seem to stray, to places far away
I need a change of scenery

Ta Ta Ta...

Another Pleasant Valley Sunday
Charcoal burning everywhere
Another Pleasant Valley Sunday
Here in status symbol land

Another Pleasant Valley Sunday

That song was a completely anti-social, anti-success song, according to my parents, grandparents, etc. Yet, quite prophetic when looking back now.

Hi, Dave

I would install Zone Alarm first. The upper right of the Zone Alarm
control panel shows which programs are actively connected
to the communications port. With Zone alarm, you can set
the permissions for each of the programs that try to access the net.

Also, install "Spy Bot Search and Destroy",
I found it did a much better job than Ad-Aware in finding
spyware that was causing instability on my system.

Some of the trojans out there will disable Norton
anti-virus if the trojan is on your machine before
you got the Norton update for that particular trojan.
I would install Avg Free anti-virus,
from Grisoft.com, and run its anti-virus search.
(On my machine, it takes about 20 minutes, vs. 2 hours
for a Norton anti-virus search.) Sometimes, it's
better to have a "brand X" anti-Virus available,
since the bad guys won't bother trying to defeat it.

Just another day on the newsgroup, and Kim offers up her usual dose of succinct, logically correct, and convincing repartee:

> DICK, you're confused.

Uh, confusion would be an improvement.

Kim W5TIT ;)

I have never heard such whining...

Kim W5TIT

No. As usual, you read wrong. I said that I would not be responding *unless* I saw something intellectual and logical from you. So, uh, you would agree then that there's been nothing intellectual or logical from you. Good. We both agree on that. I was just checking.

Kim W5TIT

:-) I 'spose Larry thinks everyone has the same amount of time to waste as he...

Kim W5TIT

Not at all, Larry. Ya jealous?

Kim W5TIT

ROFLMAO!! Ladies and gents, there's some intellect and logic fer ya...

Gads, Larry. You're getting more and more desperate. Tell ya what, I'll quit responding to your posts *until* I see something logical and intellectual. Go ahead, make my day...

Kim W5TIT

Actually, that last one was one of her better efforts. The "Dirty Harry" quote was a particularly refreshing change in her usually dull rhetoric, or does she just think that she has a pair of "44 Magnums?"

Larry, my 1st and 5th duty assignemnts were Army, and my 6th was Navy.
And the Meteorology Tech schools were all four services combined.

Not much play in school from the Army, however, as part of the 1947
agreement when we took away their airplanes was that the USAF would
continue providing wx support. Then the Army discovered the
helicopter and that started the mission creep. Thirty percent of AF
weather personnel are assigned to the Army.

And during my turn in the barrel, I thanked my lucky stars I was Air
Force. The USN was better to their people than the Army, but not
much.

Dave you might try what I did last week to rid my system of Lovesan/Blaster..

go to (www.mcafee.com) and download "Stinger" from the upper right portion of their homepage. It scans and removes 30of the latest viruses/worms.

Worked for me.

gud luck

I cannot understand that. All the amateur literature is chock full of
examples of QRP operations where worldwide contacts take place using
mere milliwatts.

FWIW, I've never run more than 100 watts from my home station on HF.

> 2) Being treated as a second class citizen -- the Rookie League is not a
> fun place to be

Tell me about it, but I think the times have changed. Lotsa OF's here
are whimsical about their rookie days.
```

But you didn't start as an Extra, did you?

In 1987 when I became a ham, we were called Novices. We were shuttled to bands of little or no CW activity (ghettos) to somehow learn from each other. There was little or no activity at the tail end of the Novice Era.

Technician was the consolation prize for passing the General exam but flunking the 13 wpm code.

Today, Technician is the starting point, and I don't consider the label Technician to be the equivalent of "Rookie League." Novice, however, always smacked of "Rookie."

With Hans proposal, the new hams are mainstreamed and can easily learn from some highly seasoned operators.

> 3) Basic congenital problem with Time-In-Grade approach. (Please note, I
> would not have had a problem with serious theory/operating practice tests as
> opposed to the actual Elements 2,3, and 4. I won't have passed them all, I
> am sure, but I would not have had a problem with approach.).

If you're a bright guy and the "serious theory/operating" tests, you would have passed -providing- the QP continues to be published. If not, then you'd find the Extra ranks occupied by mostly electronic technicians and engineers.

> Of the above, number 3 would have been the most important to me, I think.
> Now that I am licensed, I seldom put out more than 75 watts. Yes, I have an
> amplifier, but I checked my log and see that I haven't had it on since early
> June (honest).

I believe you.

So, experience has showed me how silly 1) above is -- that
> does not, however, change how I felt in my pre-licensed days.

True. And this is the argument that I use with the current Morse Code exam being administered. It is not Morse Code, it is Farnsworth at 13-15 WPM, not the Morse at the specified 5wpm.

The OF's here say that the testee can request the old Morse exam and not take it Farnsworth styled. I say they don't even know the difference, so how could they?

> I am sure that I am an odd duck -- I never even heard a QSO until after I
> was licensed (the purest Extra Lite in captivity).

Don't fool yourself. There were lots of "Code-Tape Extras" in days gone by.

> I can understand and accept people thinking that anyone as ignorant as me

> existence, I would suggest a 100 watt limit rather than 50 watts. Given that
> the vast majority of modern transceivers run 100 watts output, enforcing a
> 50 watt maximum would be problematical at best.

There are technical reasons that Hans suggested the 50W maximum.
Safety. And you'll recall from the exams that you took, that beyond
50W on Ten meters, you'd have to accomplish the calculations for RF
safety. 100W would require the safety calculations to be tested as
well. That is a clear cut-off/point of distinction to me.

To be honest, on HF, the Japanese market is full of 10W transceivers
made specifically for their 10W license, and I would not object to 10W
being the standard on HF and 50W on VHF+ for the limited license.

Given a 50W limit and 100W transceivers being a virtual standard, I
can see more than a little room for abuse. But in the great scheme of
things, that's a 3db abuse and probably hardly enforceable.

> 73
>
> Paul AB0SI

Paul, you have a good discussion and the most important point was your
pre-license days impressions of the service. The ARRL would be wise
to pay attention to the image that interested newcomers have to our
service/hobby. And the naming of the license class is but one
argument that has been discussed here previously.

Good heavens, it was from a "manufactured" music group that was about a saccharine as could be imagined at the time.

The song is really an anti-conformity ditty, loosely derived from Malvina Reynolds' "Little Boxes" and others of that ilk.

>Yet, quite prophetic when looking back now.

How?

--

The Monkees' did give us at least one legitimate decent song, although not directly. "I'm A Believer" was a throwaway of 30+ years ago until Smash Mouth covered it for the film "Shrek" and showed what could be done with that material in talented hands.

>Smart or dumb.

??

Perhaps you meant "smart *and* dumb"....

>Likely as not, that cannot be answered so succinctly.

Aye.

> I
>think to some degree the type of programming available today far exceeds
>what is needed. For example, how much reality TV do we really "need"?

About 1% of what's out there, I'd say.

>BUT,
>the primary responsibility for what happens in the home is still the
>family--right?

RIGHT.

But as far as TV goes, I'd say "the primary responsibility for what is on TV is
the viewing audience". To a very large extent, the folks in charge of
programming put on what people actually decide to watch, not what they say they
want to watch. How long do you think "Survivor" would last with low ratings?

The only "reality TV" I found halfway worth watching were the PBS series "1900
House" "1940 House" "Frontier House" etc. Most of which were actually BBC
productions.

>For the politics of it all, I like that, at least so far (and that comment
>belies another discussion altogether) we live in a country where "anything"
>goes.

Actually, "anything" doesn't go in American TV culture. Explicit violence is all over the place, in many different forms, but explicit sex is another matter entirely. Even on cable.

>But with that comes the responsibility of family and, beyond that,
>community. I think society in a transitional phase, where everyone is
>beginning to realize that we all have a responsibility to help see that our

>enough to support, indeed call for, its censorship--in any form or another.
>I'd rather have the capability to decide for myself, my family, and my
>community, what is OK and what we need to use to learn from.

I'd say it depends what form the censorship takes. I say that we vote with our wallets. What we buy and watch controls the market far more effectively.
>
>What was acceptable yesteryear is the norm today and, to some degree, that
>is OK. I shudder to think that women would be put back into a time when
>they weren't allowed the commonality with men as they are today.

Not just women but all sorts of folks. Look at all the changes in the past 50 years, from the end of that "separate but equal" nonsense to truth in advertising and equality of opportunity and housing.

Take just one concept - say, the idea that all citizens should have the right to vote regardless of race. 50 years ago it was considered "liberal" by some and "radical" by others. Now it's mainstream.

>And, after
>all, the media helped aid in the progress for women. I shudder to think of
>a time when Ozzie and Harriet (parents who were so blind they couldn't see
>their children behind their backs) were considered the norm for family life.

Actually, I don't think anybody who was really raising a family in the Ozzie/Beaver/Donna Reed days thought those shows were a totally accurate reflection of their reality. No more so than "Family Ties" or "All In The Family" were, in their time. They were simply stories.

In fact, almost all "domestic comedies" derive from a single source: Jackie Gleason's "Honeymooners" sketches of over 50 years ago. Look at them carefully

and they are almost all variations on that theme.

(The other classics are the "ensemble comedies" which are not family-based.
Their source are the '70s shows "Barney Miller" and "WKRP in Cincinnati")

>Today, we deal with each other on real levels and parents recognize
>that--darn it all--kids for the most part are going to be tempted to the
>unthinkable. We don't need TV to teach us that, it is a reality.

True, but it would be nice if TV wasn't trying to tell us those things were
"normal" or "OK".
>
>For an extreme, take the example of the movie (if we can call it that)
>"Jackass." I never heard of this MTV show until the movie came out. While
>I was horrified to see some of the things this crew of folk get themselves

I've heard of it. Involves people doing incredibly stupid stuff.

>I like that this
>is available--politically speaking--and, it would be completely forbidden in
>my home if I'd had small children.

Ah, hold on a sec...

How "small"? 5 years old? 10 years old? 15 years old?

And how are you going to control what goes on in your house 24/7 if you're not
there all the time?

>To know that it's there and to know that
>some youth may be influenced to believe that things like that are OK, is the
>tool by which we learn to teach. MTV did not make people like that--they
>are out there. Without the exposure of the show, we'd never know it, right?

Wrong.

We don't need real-life examples of stupidity to teach us what can happen. And
the message sometimes gets inverted, because the stupid ones often survive.

One of the main differences between human and animal thought is that (most)
humans can deal in abstractions and future possibilities without having to
actually see things go wrong. I *know*, for instance, that playing with
gasoline is extremely dangerous even though I've never been burned by a
gasoline fire.

>It's always hard to debate in print--but hopefully you'll get what it is I'm
>trying to interpret.
>
>Smart or dumb. Both. But it's all about capability to me. I like
>flexibility. I would not want the alternative: someone or something making
>the decisions as to smart or dumb.
>
On that last point we agree. And I'll offer another observation: The right to

such freedom carries with it the responsibility to make intelligent choices and develop sound values. The two cannot be separated, even though many people focus on the first and ignore the second.

> mere milliwatts.

Please pardon the large deletetions, but the message was geting l-o-n-g.

I always assume anyone "pushing" an activilty is doing so through
rose-colored glasses. The ARRL obviously wants new hams. The ARRL telling me
I could "work the world" with a few watts was taken with a kilo or three of
salt. Interstingly enough (well, to me, at least), the inforamtion on QRP I
read only reinforced this. It seemed that QRP was the Gold Standard -- so
telling me that one could do all sorts of great things at low power was
equivilent as tellig me that Tiger Woods can hit straight drives 350 yards.
That's nice -- but what does it have to do with me?

If my thoughts about this were at all typical, we have to do a better job of
educating and convincing maybe-wanna-bes. I admit that I have no idea if my
concerns here weere typical or not. I came from a totally non-technical
background. The idea that I could talk around the world on less power than
used by the bulb in my reading lamp was impossible to accept.

Ya, well, folks talk fondly of their boot camp days, too. .

>
> But you didn't start as an Extra, did you?

Yes, I did. If I was offered the opportunity for full previldges, it seemed
silly not to take advantage of the opportunity. The attraction of ham radio

was working the world, so entering as a Technician simply didn't appeal to me. I studied code as well as General and Extra material (The Tech exam didn't require any study -- one can pass that with simple common sense. A fair number of the questions seem the equivilent to "Someone is using your favoirte frequency. You should: A) Crank up the power and blast the bozo B) Report him to Homeland Security C) Find a free frequency D) Vote Republican").

>

See above for my comments.

> With Hans proposal, the new hams are mainstreamed and can easily learn
> from some highly seasoned operators.

Most hams I have met on the air have been remarkably considerate and friendly. The bozo to human ratio is lower (MUCH lower) here than in my other hobby of tournament bridge. Unfortunately, the ratio is not nearly as good in some of the ham newsgroups (this group included, I am afraid). I started reading all the rec.radio.amateur newsgroups as soon as I become interested in ham radio. Without exaggeration, I came very close to discarding the idea of getting my license because of some of the attitudes I saw here. I think this might be a more serious problem in hurting recruiting than is realized. Ditto the forums on QRZ, EHAM, et al.

Unless the deregulation mania passes, Question Pools are going to continue. If the idea is focussed on learning, I can not think of a worse approach. My goal, I admit, was passing the Elements -- the QP made it clear to me that

the ONLY purpose of the Elements was to pass them and forget them. I do disagree with you, Brian, that one would need to be an EE to pass a meaningful Extra exam.

Ten meters? Oh ya, I remember 10 meters from the good old days of last
summer when it was open. Silly jokes aside, I understand and
appreciate the safety consideration. An exclllent point.

> To be honest, on HF, the Japanese market is full of 10W transceivers

> 6 MONTHS to get the billing stopped and corrected after I canceled.

I signed up for one of their specials a few years ago. X numbers of
hours per month, and some fee when you go over it. I wasn't paying much
attention because the bills came on a credit card bill and my XYL pays

them immediately. After a few months, she asked me why the AOL bill was like 90 dollars each month. All I could figure out was that they were charging me their "extra rate" for every second I was on line.

Plus the service was slow due to the little ads they graciously sent me, the browser didn't really work, and I was cut off a lot. Finally I tried to terminate my account, and they had all kinds of weird stipulations that stood in the way of ending the account. Just trying to find the number to call took a lot of time online.

After I switch to a new provider, I was deluged by "We want you back" mail. Maybe if they put enough effort into keeping me happy in the first place, they wouldn't have to put the effort into getting me back.

Other than that, I just love A*L.

>
Not really!

First off, once you get beyond the HT or magmount-on-the-filing-cabinet stage,
it's a lot more trouble to set up a ham station.

Second (and this is the biggie) the only way for a bootlegger to avoid lots of
negative attention from other hams is to act legitimate.

Or worthy of prohibition.

> Men once used shame and ridicule to force women to comply with their
>domination.

some men did those things, and worse. Some men still do.

>That time has passed, Larry.

Yeah, those dang "liberals" demanding equal rights and such....

>Women are not ashamed of their
>bodies anymore, nor are they embarrassed by the mere mention of some part of
>that body.

Some women are, some aren't. Does anyone think Kim's mind is going to be changed by Larry's opposition?

Some things are inappropriate for ham radio - doesn't mean they're anything to be ashamed of.

>Would we (men) really want it any other way?
>
some men obviously do...

What's interesting is that Larry publicizes Kim's call here, drawing greater attention to it than anyone else.

Also interesting that the W6 version of Kim's call has been held by someone with the first name Michael (!) since at least 1978 (it's in the 1979 callbook, which was printed in late 1978...) So FCC has alowed such calls for at least 24 years if not more.

When you posted that his page was down I had just came off of that page at
the AOL URL. So if you want to continue with your LIE. That is your
choice.

I simply stated it was still there. And it was. SO stick it up your arse.

And as for 'porn'. If you consider a picture of a very lovely woman, undressed, in a NON SEXUAL pose pornographic......you need help.

2533. Advanced licensees who refuse to upgrade because of the CW issue

Newsgroup: rec.radio.amateur.policy
Date: 2003-08-31 21:09:12 UTC
From: jason_hsu@my-deja.com
Message-ID: <f7d9a152.0308311309.44c88748@posting.google.com>
Source record: 75948

I found this comment on eham.net:
"I hold the OLD ADVANCED license and it is a matter of prestidge. I had to have 13 wpm to get to this level and now they want to do away with ALL CW? Keep at least the 5 wpm.
It is too easy to pass a written exam. The code kept the CB crowd from gaining acess to our bands. "

Is this for real? Are there REALLY people with Advanced licenses who refuse to upgrade to Amateur Extra SIMPLY because they feel the need to prove they passed the 13 wpm exam? I know it's a free country, and there are also many Advanced licensees who decide that the extra privileges aren't worth going to the trouble of studying up and going to the VE session, but I find this hard to believe.

Anyone who thinks Morse Code is that important should try OPERATING high-speed Morse Code and participate in Morse Code contests. All the Advanced license proves is that you passed 13 wpm and the other exam requirements years ago. It says nothing about what you have been doing since. People who want to brag about their Morse Code proficiency can do so much less obnoxiously by actually USING it on the air.

Oh, I think many today--even me--are quite involved and disolved with keeping ourselves happy with material things. While I am not a keep up with the Jones' kind of person (i.e., unaffected by "status" symbols), I do find amusement in "things" more than I used to. I used to be happy just to watch ants...

I laughed hysterically when I saw this, Jim!! Man, they'd make great ones.
What's a "real" clay pigeon made of? Reason I ask is, that shooting skeet
with CDs would be putting an awful lot of plastic into our dear mother
earth.

Ah - good explanation! And observation...

Here's another one for ya...

From 1972-1976 I attended a large urban university. The big thing back then
was "nonconformity" to the rules of the "establishment", particularly in
manners of slang, clothes and haircut.

After a while, though, it became clear that we'd simply traded one form of
conformity for another, and that we "nonconformists" pretty much dressed alike,
talked alike, and had similar haircuts.

The university gave us more than schooling - we were actually educated, often
by experiences that seemed minor at the time.

Ugh. Bad idea.

Here's a practical use for them: Put them under candles, shiny side up. They
reflect the loight and some heat, and protect your table/cloth from dripping
wax.

And a practical joke use: Make up a real-looking CD label that says "HOT XXX
PHOTOS" or some such, stick it on the AOL CD, and leave it around where someone
will swipe it and try to view it.

bwaahaaahaaa.....

The fact of the matter is that simply having an Advanced is not proof of code
speed. Since 1990, medical waivers were available for 13 and 20 wpm.
>
>Is this for real? Are there REALLY people with Advanced licenses who
>refuse to upgrade to Amateur Extra SIMPLY because they feel the need

There are some misguided folks who think that, but in fact it's not a proof of
code speed any more than my Extra is proof of 20 per.

>I know it's a free country, and
>there are also many Advanced licensees who decide that the extra
>privileges aren't worth going to the trouble of studying up and going
>to the VE session, but I find this hard to believe.

If somebody wants to know my code skills and technical knowledge, I don't point
to a license test I took in 1970. Instead, I just show 'em.

>Anyone who thinks Morse Code is that important should try OPERATING
>high-speed Morse Code and participate in Morse Code contests.

We do! 13 wpm isn't high speed, tho.

>All the
>Advanced license proves is that you passed 13 wpm and the other exam

The time of your post: 30 Aug 2003 18:45:08 GMT (proof is in Message-ID:
<Ug64b.5413$EW1.4148@newsread1.news.atl.earthlink.net>)

So, Dan, you lying sack of shit, you posted your claim almost six
hours later! By then, Jon had plenty of time to whine and to beg AOL
for a reprieve.

The pages were down at the time I said they were. You came late (and
uninformed) to the discussion, blazing away with your cap pistols.

And as to the pornographic nature, or lack thereof, of Jon's Penny
pictures, he was in violation of AOL's TOS simply by posting nudity,
and he knew it. AOL in general sucks, and its college kid, part time
employees will kill an account or some web pages at the drop of a hat.

Anyone who goes ahead and uses AOL as an ISP anyway deserves what they
get. I have no sympathy for them at all.

Absolutely!! I was one "of those" (nonconformists). Actually, I still concentrate on being so--it doesn't come naturally any more <GRIN>. If everyone is planting roses, I'll plant petunias. If all women like diamonds, I like opals (and that is actually the truth).

Anyway, you're right about the more we tried to be different, the more we were the same. Uh, but we were the same together ;)

ROFLMAO!!! Hey, use them for gift tags! Make up a label, place it onto the AOL CD, and use a pretty ribbon to tie between the package and the hole of the CD.

Hmmmmm, this could really get interesting (they could also be used against those wall mounted candle holders, carried in the pocket on a hike (they'd reflect light and work for signaling really well). Let's see...they could be strung onto a mobile and used as a bird attractant for the bird bath...

I'll stop, I gotta go get stuff to do the smoked brisket for tomorrow!

I'm not sure what you're saying, Ryan.

I don't agree with all ARRL policies, but I don't see ARRL trying to control my
free speech. Sure, it would be great if all members agreed on all issues but
that's simply not going to happen unless there's a mechanism like NCI has to
eliminate those who disagree.

Yes, ARRL says they represent their membership - just like your congresscritter
says he preresents his/her constituents. Does your congressperson agree with
you on every single issue?
>

>Only if one chooses to request that information beased upon the decision
>whether or not to join. Its like going to a car dealership and the car
>salesperson stating that you will be buying a vehicle, but not tell you
>anything about it.

Not at all. You can ask Hq for their policy. You can email your director. I
betcha if you emailed your director and asked his/her view on some issue, and
mentioned you were considering joining, you'd get an answer.

On the codetest issue, ARRL has been procodetest for a long time because that
has been the position of the majority of the membership. Maybe that's changed,
maybe it hasn't, but would you expect ARRL to go with the minority position?

>> You seem to expect them to roll over and adopt YOUR opinion. That's
>> unrealistic. Whether you join or not is your business of course. But
>> unless you are a member, you have no right to expect to control their
>> policies or for them to listen to your opinions and adopt your opinions.
>>If
>> you want to change them, join. If you aren't willing to join, don't
>>expect
>> to change them. That's pretty simple.
>
>Never did I state they should roll over to my opinions exclusively, but my
>opinions are not singular, there are many more that hold the same position
>on a variety of issues. If they are claiming control of amateur radio as a
>whole, not just the membership, then my opinion should count in that

>respect. I can tell you however, there are alot of the opinions I hold that
>are held by a ton of people with ham licenses.

Sure. And there are a ton of people who hold different opinions. That's the
nature of the game.
>
>> I know why I am a member. They can do things that I cannot.
>> 1) Take the current BPL situation. They have the finances and facilities
>> to do the research that I can't afford. That is but one of many things.
>
>Yeah.... they must be the only one's too eh?

Who else is doing what W1RFI & Co. did? A 121 page engineering analysis of the
impact of BPL on typical amateur stations, including measurements and
observations of actual installations, put together on short notice. Betcha Ed
wasn't working 40 hour weeks to put that baby together.

And if ya think BPL is an HF-only problem, note that it goes as high as 80 MHz
on fundamentals, and that outfits like Cingular are concerned about
interference from harmonics messing up their 800+ MHz services.
>
>> 2) Product tests/reviews. I can't afford to buy all the test equipment,
>> every new radio, antenna, etc and run my own comparisons.
>> ... and so on.
>
>Again, CQ magazine does that as well.

Not the way ARRL does it. I've been to the ARRL lab, inside the screen room,
talked to the folks who do the testing. They buy actual production units
through regular channels and beat the #$%^& out of them in the lab. The
Extended Report (available to members only) goes even farther than the mag
report.

Does CQ even have a lab?

>Granted, I will wholeheartedly admit
>that QST is a decent magazine, even though it is getting thinner and
>thinner, but it is a good magazine.

I've got every QST from the late 1920s to today, and they are getting fatter.

> My only observation is that it should
>also include some technical material for the newer hams, as not all of us
>are Extra class electrical/electronics engineers. Although I am above the
>"simple circuit" stage, I am however not the highest qualified in the
>electronics side of this hobby. I am man enough to admit I need to learn
>more.

The point of QST is the new and novel. The Handbook and other publications are
for the standard practices. There's also QEX.
>
>Again, You keep saying I should join, but why should I?? List specific
>reasons, backed by facts. Not vague generalities or

>"big-brother/mafioso-like" reasons?

OK, here ya go:

1) Like it or not, ARRL is the only general-purpose membership org we hams have in the USA. No other group is going to step up to the plate on issues like BPL, CC&Rs, PRB-1, product testing, etc. You may not see those issues as affecting you, but in the long run they affect all of us.

Heck, I remember a time when major manufacturers would put out ham gear with known shortcomings because they knew nobody would really put the stuff to a real test. Not any more!

2) One of the things that has kept ham radio going all these years is the presence of strong national societies. The FCC and ITU have no vested interest in keeping amateur radio alive and healthy. ARRL does.

>All it is, is a very expensive magazine
>subscription, so let's
>not kid ourselves.

How much is it - $39 a year, single year? How much is CQ or any other mag? How much are most small-circulation non-industry publications?

>If there are some actual reasons listed, I might
>consider joining. If not, then that sums it up pretty good.
>
>I can honestly say that you are one of the few people that I have met on
>here, and I like you as a person. But there is one thing as a fact I know
>for sure, we will never agree on is the ARRL. I do not take the ARRL as
>blind faith, or like a religion.

Nor do I. Some of their positions are downright bizarre.

>I do not put the ARRL in a position close
>to god as some put here and elsewhere. I do not consider the arrl like a
>religion or a church organization as some people equate it to. I will be
>one of the first people to join if there ever becomes a group like the
>United States Amateur Radio Association or the National Radio Relay League
>or any other similar group. (don't know if either of those exist.....)

Over the years there have been groups which tried to be an ARRL alternative. None ever got more than a few thousand members, and all quietly disappeared after a few years, usually because they could not achieve critical mass.

Heck, how big is NCI - 4000 members, worldwide, with a mandate to disappear when code testing does? How about NCVEC - can anyone join and elect policy makers?

>The
>arrl needs the competition to keep them in check. Hell, Republicrats claim
>competition is a GOOD thing. (except when it encroaches on "their"
>businesses.)
>

Right - and so we have the airline industry tottering on the verge of bankruptcy even with megabuck bailouts, the telecom industry bubble, the Enron mess, the Northeast blackout....

Jim:

Well, it's paid for, if that's what you mean! OOOOHHH, you mean
performance-wise.

2.66 GHz P4, 1 GB RAM, top-of-the-line Intel DDR 400 MHz motherboard,
DVDRW/CDROM drive and another CDROM drive, 1.44 MB floppy drive,
6 USB ports, 2 cereal ports (one for Wheeties, one for Grape Nuts), and
a USR V.92 EXTERNAL USB modem. O/S will be Windoze XP. Oh,
40 GB Western Digital hard drive. It's being put together by a local
computer firm called Kehtron Computer, which has a good rep in this area
and offers the advantage of being local, so if anything goes wrong, I can
just bring it back with a bottle of ketchup and mustard and say, "Luncheon
is served, boys!"

>>I'm one of the first 1,000 original AOL users, and just can't
>>seem to break the habit.

>Vipul Shah, (VShah101@aol.com) keeps insisting certain activities
>don't exist in Amateur Radio.

<link to a direction finding contest given>

In any group base there will be many aspects supported. In Ham radio, certain trends are there that would not be there if there was a truly random distribution. A trend is a trend, not 100% that the activity does not exist.

From: n2ey@aol.com (N2EY)
>Of course. Looks like a lot of fun. Note the thinness of many of the
>contestants, too.

People that participate in Amateur Radio Direction Finding would tend to be thinner than most Hams because this is a physical activity. That's consistent with what I have been saying before. Less Hams are interested in that and a greater percentage of Hams are overweight.

However, you must not be looking at the same photos I am looking at. It does not support the thinness claim. And one female looks like a male, which you would not know unless you saw the picture caption. Sorry. I hate to comment on people's weight, but you brought it up.

>But do you really think either of those you seek to convince will admit they
>were mistaken?

In any group base there will be many aspects supported. In Ham radio, certain trends are there that would not be there if there was a truly random distribution.

When you look at club activities, newsletters, QST and other publications, one can plainly see which activities the great majority of Hams are interested in.

>Particularly when you and the ARRL are the messengers?

The ARRL is generally more balanced than the typical Ham. They have to be.

Its too bad that all some people care about is code speed and not the technical
material.

So, Jason, how are you doing? My time has passed, but I wish you luck. Although
you seem to be misguided and support Morse code, something I don't feel would
be interesting or worth it. There should be more support of the technical
aspects, something only a small percentage of Hams seem to be interested in.

Well, I have said it before, and I will say it again, if the FCC is making any specific callsigns available that are allegedly deemed "offensive" then they are the ones that are responsible for that callsign. The efforts to get those callsigns blocked/banned/removed etc. falls on them as long as they are the governing body over amateur radio. It's just that simple.

The FCC is the issuing body that gives the licenses out to recipients who
have met the requirements for each license class at the time of issuance.
Unless some other governmental organization is the one actually issuing the
licenses and maintaining the callsign database, they ARE responsible. Write
to your congress or senatorperson to get the FCC to remove the list of what
callsigns you deem offensive. After all, the majority of the congress and
senate ARE Republicans now.

>
> >Any
> >vanity callsign or even if it even was a sequentially assigned that is

Pure BS.... the FCC has people on their staff that can manage a database,
it's that simple. Remove the ones that are not "acceptable.

>
> >I should have the right to request ANY
> >callsign that is listed as "available" provided I have the initial right
to

I guess that is all a matter of perception. I would actually have to see
real proof that it really has damaged the ARS, other that a perception of a
few people here....

>
> >If the list is including some of

Define which moral values. Different groups have different values that they
deem to be of the utmost importance. That is a different subject
all-together though.

Mike,

I do believe it does serve some purpose..... I have a friend that goes to Arizona every winter due to him and his wife's health issues and he does not have much there to use for equipment. He and I chat via Echolink on a regular basis on the link point connected where he is at. I also have developed some friendships with the people that frequent that access point (simplex access point, not a repeater one) as well. He is a 30+ year Extra class licensee so he CAN operate just about anywhere but only has 2m/70cm access when he goes there.

In this case it is a very productive use of the system. In this particular circumstance we would never be able to communicate if it wasn't for the system. Other than a little experimentation with it at first, I have not used it for much more than to communicate with him though.

>Radio the way it always has been. Good old radios and antennas....and for
>those with preplannning a Marine battery or two as well.

How often has your fantasy been played out? Can you give examples where YOU
encountered that?

>Actually, and if you were not trying to play "lawyer", this is less a
fantasy than a real-life occurrence. I have often had our power fail during
inclement WX and it is not all that unusual for an ice storm to down area
telephone lines.
I agree with the post and while I do not maintain more than one marine
battery I do have one. All but one of my rigs are capable of being hooked to
this battery in times of power outages. I have had several occasions to do
just that...use the battery.
And by the way. Who in the heck are YOU to ask that someone give YOU
examples of when THEY used a marine battery for emergency comms?

Hell, I work for a private university, and it is one of the "bastions" of republican thought; "do as I say, not do as I do." It promotes the lifestyle of the little rich brats that have been raised with the thinking of "it's not what you know, but who you know." Forget achieving based on merits or achievements.

Just an update, we (as of Sunday night so far) raised $2900 and still have
Monday to collect. We already blew away last year's amount, and hopefully
can raise another 500 or more tomorrow!

Got a wicked sunburn on the face out of all of this though..... :)

You are partially right Dwight, if he is using an old computer like a Commodore 64 or similar from that era, but if he is using any PC from the old XT/AT days till now, there are a ton of monitors out there are dirt cheap if looking for the old monochrome ones and the VGA/SVGA monitors can be found really cheaply as well.

Although true, the fact of a waiver is in the FCC's database (there's a field for it). As an excuse not to upgrade to extra, it's probably one of the lamest ideas around. Upon upgrade, one will still have the "prior class held" field that will say advanced, so with the combination of these two data fields, we will know that a person once held an advanced class license WITHOUT the medical waiver and thus officially passed the 13wpm code element. [Whether or not the person actually took the test or just paid for his license will generally never be known!]

To me, the statement is more typical of some advanced class sourpuss who failed to take advantage of the transitional rule back in 2000 and obtain credit for the easier element 4B than the current element 4. Granted that was only for a 3.5 month window...

What surprises me is this: There are still some people (the August 30 session I did had two such people) who are coming in for their pre-87-tech to general no test upgrades, 3+ years after the rules change went into effect....

> >Is this for real? Are there REALLY people with Advanced licenses who

Well, he didn't specify exact intentions, so I did what any PCTA would do;
generalize without knowing all of the facts!
But I still stand by the statement in regards to the low cost of regular
monitors.

brianburke@juno.com (Brian) writes:

>And during my turn in the barrel, I thanked my lucky stars I was Air
>Force. The USN was better to their people than the Army, but not
>much.

Brian:

Don't get me wrong, I had a great time in the Air Force, and have no regrets over my choice of a military career. However, you brushed up against part of my "problem" with the Air Force. I think that they are TOO good to their people, if that's possible. My last couple of years (the ones at Dover AFB) were made miserable by a bunch of whining, complaining, non-working Senior Airmen who didn't want to do anything but take two-hour lunch breaks, get their weekends off, get their 30 days leave exactly when they wanted it, and get paid every two weeks. Doing the job wasn't even on their Top 10 list of priorities. Of course, my job as a 9-level MSgt in a Superintendent slot was to make sure they were doing that job. So, whenever I dared to crack the whip a bit, they went around me to our CMSgt Squadron Ops Superintendent, who had the ever-popular "open door policy." Their complaints would end up with me being called on his carpet, whereupon I'd usually tell him that when they came in as a result of his open door policy, I'd much prefer it if he'd slam the door in their faces! Well, this got me a reputation of not being a "people person," since this Chief thought it was every supervisor's job to know the right buttons to push to get people to work. When I was an Airman, nobody had to push any buttons on me. I was always at work on time, early, in fact, with a clean, sharp-looking uniform, haircut, spit-polished shoes you could use as a shaving mirror, and my head full of all the technical information about my job I'd just learned from my CDC's. I was a great Airman, and continued to be right up to the day I retired. However, in my entire career as a supervisor (which, since I was always promoted way ahead of my alleged "peers," started at a mere 3 years TIS) I've only a small handful of Airmen who were anything like me. The rest were all the whining, needy, lazy, unmotivated, indifferent No-Coder type. When they weren't goofing off on the job, they were getting into trouble in the dorms and off-base, making my life miserable sorting them out at all hours of the night.

Now, the Navy always had a much different attitude toward discipline than the Air Force. A Navy Chief wields true power over his people, and usually isn't second-guessed or undermined by his senior Chiefs or officers. I have to say that in the many times I've worked with the Navy,

I've always been impressed with their Enlisted personnel. I'd never met one who wasn't able to address me correctly by rank -- but I'm sure that if the typical A1C were to encounter a Navy Petty Officer First Class in a professional situation, he'd probably call him or her "Sarge."

Navy Enlisted people have always seemed to have their acts together much better than Airmen, and I guess that's because they're all a lot closer to actual combat conditions than most Airmen ever get on a day-to-day basis. Things may have changed a bit since I've retired, what with the constant involvement in real-world combat situations these days. At least, I hope so.

I may have said that, but when I could collect $250.00 on a BET to upgrade I did. But dont worry Brian I still have not used the EXTRA Privilages.
By the way Jason, Brian is one of the Weenies who couldnt make it above Tech untill the Welfare upgrade came out. He also claimed the CW was the only thing that was holding him back from Upgrading. And that the Written Test were no problem. After a year he still cant pass the EXTRA. Hes waiting for the next give away so he can upgrade.

I remember being on TDY at Darmstadt, Germany in the early 60's where we were attached to an AF station for rations The.first morning, in the chow line the airman in the line ahead of me ordered up a cheese omelet! I nearly fell out! Never heard of such a thing in the military in those days, outside the AF at least. In the Army you got eggs, fried.

BTW, those guys at that detachment were listening to the Russkies ---on CW! Most of them wore their headphones to chow, like doctor wears his stethoscope.

In he army then, the way the troops were treated was largely up to the local commanders. If an officer got too friendly with his troops he'd usually wind up being reassigned.

We had a power outage recently in the Northeast. The Echolink connection to a local 2 meter repeater was down because the RoadRunner cable system has no battery backup in these parts.

True - but you have to dig up the database and know what to look for. The
license itself doesn't show waiver status, IIRC.

>As an excuse not to upgrade to extra, it's probably one of the

Not in all cases. Look me up in the data base - no entry for "former license
class", even though I was Advanced from 1968 to 1970 (old 2 year waiting
period)

>[Whether or not

>session
>I did had two such people) who are coming in for their pre-87-tech to general
>no test upgrades, 3+ years after the rules change went into effect....

I'm not surprised. Many hams I know do not follow the rules changes anywhere near as closely as some of us do. Look at restructuring - out of over 678,000 hams, FCC got 2200 or so comments.

Some folks are just finding out what the changes mean. And with 10 year renewals, folks who don't move around have very little interaction with FCC license procedures. The facts are often twisted in the retelling, too. Look at the misunderstanding about Element 1 and Technicians....

Fun fact:

From May 14 2000 to July 31, 2003, the number of Advanceds dropped from 99,782 to 83,141. That includes upgrades to Extra and dropouts. Only a 17% decline in over three years.

Bummer, man! Why such a downer?
>
>Hey, she'e the one who wanted to go to Woodstock back when, but her mother
>wouldn't let her because she was too young. Pity!
>
Woodstock? Let's see, that was late summer 1969, when Kim was 15 if memory
serves. I don't think a responsible parent would let their 15-year-old go to
such a "happening".

Heck, from all accounts most of those who set out for Woodstock never actually
got there due to traffic snarls. Some of the performers had to be helicoptered
in and out, and some never made it. The whole event was such a mess that large
outdoor festivals basically disappeared afterwards because nobody with half a

brain would issue the necessary permits. (Altamont drove the final nail in that coffin).

Counterculture? Check this out: The promoters who put on the Woodstock festival lost big piles of money on the concert. The whole thing was too big for them to control - early on they even lost the ability to collect admission. There was even talk of civil suits over huge unpaid expenses BUT....

The promoters had done one smart thing: They owned the rights to almost all recordings (film and sound) made at the festival. So they made a documentary movie and record album for very little money, and made back all their losses and millions more. Good old capitalism...

Remember the song "Woodstock", made famous by Crosby Stills Nash and Young? It was actually written by Joni Mitchell (who also performed the first version). Buit Mitchell was not at the Woodstock festival at all!

The summer of 1969 was when human beings first set foot on the moon. That's what I think of first when that time is mentioned.

You could say the same things if your friend had been using a cell-phone or
regular telephone, Ryan.

You most especially could say the same things if they had been using ICQ or
any other form of Internet chat.

The fact that people use Echolink to successfully communicate does not
magically make the Internet connection "ham radio". An important
distinction to keep in mind is that our hobby is not called "Amateur
Communication", where any form of communication will serve but rather
"Amateur Radio", where the focus is solely upon radio communications.

The ARRL inadvertently created some confusion about this with thier
"communicator" promotions, a few years back.

The fact that your friends have decided to slow down and reduce the audio
quality of thier Internet chat by hanging a radio on one end or the other
does not make that Internet communication "Ham Radio"... It just means that
they are willing to put up with reduced performance in thier chat
activities, in order to have a "ham radio simulator" at one end or the
other.

In the end, Echolink serves as an excuse not to use radio to communicate "as
a ham", as in the case with your friends. It also very often serves as an
excuse not to learn more about the hobby and upgrade, as in the case of the

hundreds, perhaps thousands of hams who instantly dropped plans to upgrade, or even to buy a radio upon discovering Echolink. Echolink devotees are just brimming over with excuses, but none of those excuses change the fact that Echolink is an Internet chat, not ham radio.

Just for fun: Remember "Hands across America"? It was some kind of a wierd promotion where they tried to get people to join hands in a solid chain, coast to coast! There were some unexpected difficulties in mountanous and desert areas that could have easily been foreseen, but anyway:

Imagine a chain of people, coast to coast, passing along a note like we used to do in school, but this note goes from New York to Los Angeles, California!

The original note is written down from a message heard on a handy-talky from a New York repeater.

They pass the note, thousands of people passing it hand-to-hand across the whole U.S. and finally at the end, the note is read into the microphone of another H/T, tuned to a repeater in Los Angeles.

Headline: "Hams use handy-talkies to communicate from New York to Los Angeles!"

I believe it would be stretching things just a bit too much to call it an "amateur radio" communication, don't you?

Here is what I think is an excellent parody:

We could (hopefully) all agree that all crime is "offensive." All crime is offensive because, well, it is against the law. However, I (me, personally) disagree that the growth and use of marijuana for personal use is OK, and should not be against the law. Even so, I understand and agree that anyone caught growing, carrying or using should "pay the crime." Yet, I will support a goal aimed at the decriminalization of marijuana for personal use.

That's more than I intended to say, but my point is: we could all agree that something is offensive. I do not agree that my callsign is offensive. We could all agree that some moral values are deemed to be of the utmost importance. I do not agree that my callsign is morally incorrect; therefore, my callsign does not commit offense to any morals.

UNAUTHORIZED EQUIPMENT SOLD ON INTERNET AND IN PUBLICATIONS

The Federal Communications Commission receives hundreds of complaints about alleged illegal (non-FCC certified) equipment being offered for sale on the Internet or in publications. The Commission is monitoring this situation carefully and requests your assistance. If you have any information about illegal or uncertified equipment being offered for sale, please forward it to the FCC. Useful information for the FCC includes:

* An original advertisement or Web address where the illegal equipment is

being advertised or offered for sale with the types of equipment about which

the allegations are being made, highlighted.

* If it is a Web-auction we will need the name of the auction site, the exact

item number, and auction opening and closing dates.

* Name and address of the individual or business offering the item(s) for sale.

* Complainant's name and telephone number in the event follow-up is necessary.

This information can remain confidential, if requested.

* Specifically, why you think the equipment is not in compliance with FCC rules.

* Number of pieces or types of equipment about which the allegations are being

made (one piece, five pieces, how many models, etc.).

Information can be mailed to the FCC at the address below or e-mailed to fccinfo@fcc.gov.

Perhaps FISTS should consider sending this in as a comment to be
considered with RM-10787, rather than a separate petition.

If FCC grants the "no Morse test" petition, then it is unlikely to roll
back that decision at a later date.

Yeah, but I like to think that I'm being a bit of a renegade. Actually, I don't like things all the same. Remember the good 'ol "Neighborhood Association" debates that have come and gone here? I'm against them, for whatever purpose; and would be so very, very depressed if I ever have to live "in" one.

And, as for jewelery. That is a going joke in my family. I love jewelery. Even used to work at Ed Levin Jewelers long ago. Love to get it as a present. Don't spend much time shopping for it or being distracted by it, though, if set against the rest of my female population. A couple of years ago I asked for, and received, one of those standing jewelery chests. It's

about half full. Every once in a while I'll spend an hour or two taking all my pretties out and looking at them. LOL But, save on rare occasions, you'll not find me with a piece on--not even my wedding band. Just don't like the feeling of anything around me, I guess.

Bought the album. You know, the one with the little kid on it? <GRIN>
It's the only album where I've heard Joan singing the song "Sweet Sir Gallahad" ('least I think that's the name of it) and gosh I like that song.

Yeah, Summer 1970 saw the tragedy at Kent State...the beginning of the end.

By the way, I'd have guessed you were an old hippie, Jim. At least there's still a few left upholding the original ideals. I gave up.

> WELL SAID, Kim!

>

Core values. The only thing that scares me about that is it's being done during the current administration. And, I don't like what I see happening to my USA under the current administration. For instance, and this is just a for instance, the attitude of "if you aren't for us, you're against us." While on the surface that is a logical statement; it is no more than an attempt to label and beguile anyone who is "against" something that someone is for.

> conflicting values.
> >

Well, it goes back to something you said, maybe even in another thread, not sure now. You said to me, "but you are still planting flowers and liking jewelery." I think, for the most part, if we collectively (as a society) begin to turn a path together toward, say, child pornography being wrong: there will be all kinds of different ways that it is wrong and there will be all kinds of definitions for what child pornography is. But, the common goal--the moral ground--is that it is wrong. I personally don't care if someone goes out and rips the head off a child pornographer. I wouldn't do it, but I secretly be saying "YEAH" to the person who did.

That was too much digression. I think we all, by osmosis, begin to learn to react collectively when it is recognized--somehow--that something ain't right. Only problem is, we then tend to get wrapped up in being disgusted about each others' reactions and definitions...LOL

>

Thank goodness! But, the kids of today, when they watch those shows really
do think those shows are reflecting reality and--to some degree--they were.
The moms of yesteryear wanted nothing more than to believe that their
children were sweet and innocent. And, believe me, we were far, far from
sweet and innocent. We weren't the monsters the mothers of yesteryear would
have thought us, for sure, but we also weren't sweet and innocent.

I haven't watched an old show in a long, long time. Hey, remember the
character of Fonzie? Now, in true life, a person like that would have been
sneered and jeered at--and certainly would not have had the endearment he

had on that show.

> >

That's where it is up to the family to know what is on TV, what the kids are
watching (and ideally what should be being watched as a family), and to
dispel the rumors that may be inspired by those shows. I think the kids are
getting pretty darned astute, though. All of society is getting more astute
since Sep 11 when, really, for the first time in this country we have had to
deal with "ourselves."

> >

>

You know what? I think a very young child--up to say 3--is just looking at motion on the screen. I don't think they are going to formulate an opinion one way or the other. From 3 to, say, 6, they can be "reasoned" with and told that a movie is pretend, is a comedy, whatever. But, from then on, I think one has to deal with the fact that what is watched may be revered, tried, appreciated, etc. So, from 6 up.

>
> And how are you going to control what goes on in your house 24/7 if you're not
> there all the time?
>

I'm not stupid enough to think I could. THAT is why, rather than censorship, it is up to "us" to know what is available, not to fool ourselves into thinking we can control most kids into not watching such stuff, and to reinforce good principles, be siffer than stiff about wrong-doings and not let a darned thing get past us. In other words--be the moms and dads of yesteryears, but with the blinders off. And, I agree wholeheartedly with beating the crap out of a kid for something really wrong (but my definition of "beating the crap out of" is to haul off and whack them good and hard with a belt).

>

No, what I meant is: those idiots that made that show. It isn't the "acts" they are doing that is the offensive part. It is the fact that *they believed it was OK to make a movie and "brag" about **doing** things like that* that is offensive. We let what they believed to be correct, right from the top down. The producers, directors, funders, and people that bought tickets and now, rent the movie.

And, the FCC upheld its R&O in 98-143, denying all petitions
for reconsideration asking for reinstatement of higher speed
Morse tests.

I suspect that this will work equally as well as a comment since the FCC will be required to weigh all the diverging and conflicting petitions that have already been submitted to come up with whatever ruling they may decide to put out. There are now at least seven different petitions filed although not all are yet open to comments. The fact that it is a petition may even give it more weight than just a comment.

Why would she think she had a pair of 44 Magnums, when Dirty Harry
only had one? And just how do you go about shooting 22 shorts in a 44
Magnum?

I figured you being from Missouri that you might know something about
firearms. No wonder MO cannot get a concealed carry bill to pass.

Jim,

I found my old 2nd class commercial telegraph ticket. Would that support the no medical waivers? Of course, does that prove I could still do 20 words per minute (which is the question you have been asking; good question indeed). Gad, I've got but about two weeks and my license expires. Now to go search the FCC website ... :)

Not the point. How big of a problem do we have with hams using CW straying outdie the band edges at any time? Compare that to problems with hams using voice modes and jamming, cussing, failing to ID, etc.

Yes, the op is ultimately responsible, that's a given. But the fact remains that there are orders of magnitude difference in violations...

What a dumb thread -- hey it is their license -- they can upgrade, keep it the same, let it expire, whatever.

I know a lot of advanced licensees that are perfectly happy where they are and don't need to give any dumb rationale for their decisions.

Also know lots of Hams who are extra class and keep the old 2X2 advanced call because they like it or have gotten very used to it.

As usual your calculations are very defective. I daresay I have you bested in that
category, also..

> No wonder MO cannot get a concealed carry bill to pass.

What, you don't stay abreast with such developments, when your posts indicate a confidence
in
your knowlege that simply isn't justified?

The legislature passed it, with a substantial margin, but it was vetoed by our version of
Gray Davis a couple months ago. And the referendum a couple years ago passed substantially
except in metropolitian areas where "those" who already carry, regardless, surely don't
want
to see the opposition legally armed. The same areas' voter rolls also appear strangely
similia,r to a large extent, to their cemetary marker data. Or did, until a certain GOP
senator got the Federal Elections Commission involved.

It seems a near-certainty that all the pending petitions will be rolled into a single NPRM, eventually. That's the way FCC has nearly always handled such a situation.

> Morse tests.

And they got NO input from FISTS that round at all, either. It didn't seem likely that FCC would go so far as they did, thus there was no movement within the organization. And not many members commented individually. This time WILL be different!

As you may know, FISTS has many times the membership numbers of NCI. Comments from members will be numerous, and after all, FCC officials have said they want "us" to let them know what we want in the way of restructuring rules! That's what they'll get!

Maybe if FISTS had commented en masse last time it might have some effect on the outcome, given FCC comments noted above. It remains to be seen, of course.

> for reconsideration asking for reinstatement of higher speed
> Morse tests.

OBTW, Carl, here's a partial copy of W3BE's comments on the NCVEC
petition to drop all code testing. I assume you know who W3BE is...

(For those who don't recognize the callsign, W3BE is John Johnston, retired
former chief of the Amateur and Citizen's Division, FCC. He's also a current member of the
NCVEC, who filed the petition otwhich he is responding.)

COMMENTS TO THE PETITION

I concur generally with the above referenced petition (ï¿½the Petitionï¿½) filed by the
National Conference of Volunteer Examiner Coordinators (ï¿½NCVECï¿½) with one critical
(exception). This exception is discussed below.
On March 15, 2004, I will have held an amateur service license grant from the Federal
Communications Commission for one-half century. I have held the top rank Amateur Extra
Class operator license for almost 40 years.

A telegraphy skill requirement for an Amateur Extra Class operator license grant should
continue.
As stated in the Petition, manual telegraphy continues to be an important communication
mode in the amateur service. For some 90 years, passing a test in the international Morse
code has been a fundamental requirement for an amateur operator license in the United
States. The need to bring and end to a telegraphy skill requirement for the beginner

Technician Plus Class operator and the intermediate level General Class operator is an issue separate from the need for telegraphy skill by an Amateur Extra Class operator. This top class of operator license recognizes the grantee as being a true expert in all phases of the amateur service. Such an expert must be able to send and receive messages in the international Morse code. A ï¿½telegraphy-challenged expert amateur operatorï¿½ would
be an oxymoron, indeed!

Just for your information and enlightenment!

To make a prediction, I believe his comments will carry a lot of weight with current FCC staff.

That too, but they'd work just fine to be found by air if ya just keep flashing. Same for CW. Just keep beeping and beeping and beeping and, anyone who knows something's up (and that would be nearly anyone with any capability of reasoning) will hunt the signal down :o

Oh, man. Yummmm is right. Let's see: roasted zuchinni, pineapple, and hatch peppers; smoked brisket and Ekrich brand sausage; baked potatoes encrusted with garlic, salt, and rosemary; roasted purple onion; steamed corn-on-the-cob; and iced tea.

The Hatch peppers are done, and doggone are they good!

Yes, yes it was. And, it was a shot of me smiling at my darlin' hubby while I was driving us off to the race track. Funny thing is, Larry (and because of Larry, Dick) thinks I was fat in the photo. Little do they know that when that photo was taken, I was about 140 lbs., and gorgeous to beat! I'm still gorgeous, but I'm....90 lbs. heavier now.

Just proves that Larry and Dick don't know a good woman when they see one. It also proves they're pretty darned shallow. I've been 118 for the better part of my life and I was the same then as I am now.

Having not seen a public notice from the FCC on ANY of the petitions,
it would appear that NONE of them are formally open for comment.

If I missed an official FCC public notice, I'd appreciate it if someone
could tell me the date it was released. (I check the "Daily Digest" and
the Federal Register daily ... though it's possible I could have overlooked
one ...)

Typical eyes rolled back PCTA response.

I wonder what Paul Revere used to signal with?

I wonder if Paul knew Morse Code?

Good show Larry. I really enjoy it when you provide a proper 'front end allignment' to those that keep asking for it.

I can agree with your comments about both the AF and the ARMY, since I served in both.

My main observation of the Army is they had a much lower IQ than the standard AF type. And the Army had a bunch more 'micky mouse' to deal with. But from what I've seen in the last decade or so the Army is looking a whole lot better than when I was in.

In the AF you had a job and you did that job. In the Army you did whatever job some dumbass said for you to do.

I never made it to the Navy. The mickey mouse ended my zest to travel.

In the summer of 69 I was mellowing out in a Klong House in Bangkok
Thailand.

Good to see she admitted she wasn't really a hippie.

Oh and did you mean you were AT Kent State in May of 70, or just heard or
watched it in the news?

Reason Im asking is that I was there the night before it happened. Just
curious.

Hey Dan brings back Memories, did you ever hang out at RAYS. Man we had some
Wild times there.

2645. Vietnam and Kent State, the same movie.

My my Brian....how is it so hard for you to figure a person could be a
veteran of VN and be at Kent State also? You really must be a dumb ass.

I was at Kent State visiting my cousin the evening before the shootings.
The national guard had blocked the streets and the kids were running up and
down the street throwing rocks, etc.

I had my military ID checked by the Guard on my way out of town. The next
day the shootings occured. (I was in-active reserve status).

I was discharged in 1968. I went back to Thailand as a civilian and
returned stateside in December of 69. My original home is Alliance, Ohio.
Thats about 34 miles South of Kent, Ohio.

You can now wipe the slobber off your chin.

Many times the number of *US* NCI members, Carl.

I've given it a read. It sounds pretty good, I agree with it for the most part, and it is doomed. Won't happen. Not in a million years.

It's not the way we are heading.

How do you justify a trained group of communicators that are versed in a mode that is as useful and needed as CW is? There isn't an emergency right now.

It's not the way we are heading.

Perhaps some day they will see the value, just like all the people who build houses in flood plains - Hey, those areas are dry 99.5 percent of the time!

Of course the NCI member list is online too....isn't it? ISN'T IT???

It doesn't take a majority to win an issue, Dick. All it takes is an
irate minority that is prepared to be loud and active.

What do they do for an encore?

Hey clones!

Go to:

http://news.yahoo.com/

and follow the technology link to "Car that can park itself put on sale by Toyota". I'd put the actual link in but it's waay too long for a single line on a post.

There is no further need to include a parking test in the examination for Drivers licenses. Now that a car can park itself, why should anyone have to learn how to do it. Imagine how much more cellphone time and makeup application time this will give people!

- Mike KB3EIA - out!

President, NPTI

"Dedicated to taking driving into the future"

No Keith, it is not silly. You are just one of those that are too lazy to
learn, and want to change the whole license structure to accomidate you.

>the organization.

There's also the fact that there was an ARRL proposal on the table, as well as
others.

>And not many members commented individually.

I did.

>This time WILL be different!

Oyez!

To many folks, reduction in the code tests was one thing, but total elimination
is quite another. Note too that many hams are/were of the opinion "reduce the
code, expand the written" but what we got was reduction across the board.

> As you may know, FISTS has many times the membership numbers of NCI.

Over 10,000 last time I looked. And FISTS started with #1. Of course not all
the numbers are active - dues are $15/year.

>Comments from
>members will be numerous, and after all, FCC officials have said they want

>
Exactly. Maybe code test retention is the majority position today, as it was in
1998-1999 (judging by comments) Or maybe the majority has shifted. Maybe FCC
will go with the majority opinion this time, which it did not do in 1999.

It should be noted that the FISTS petition addresses more than the issue of
code testing.

How is sending in a petition a political act? Does that mean when NCI sent in a petition it was political? Or perhaps they were simply following proceedures. Duuuuuuuuu

Yup you got it. Here in Michigan the driving test is two parts. The first part, which you MUST pass before you can take the actual driving section, is parking manuevers. These consist of pulling up within 2 feet of but not over the line, backing into a parking space like those in shopping centers, and parallel parking. These three manuevers count for 8 points. The parallel parking is 5 of those 8. You can only miss 6 points to pass this section. So if you blow parallel parking and make any mistake at all on the others, you fail. Most new drivers have to take the test a minimum of twice. Three times is more typical.

Fail the basically unimportant parking lot maneuvers (these situations can all be avoided in the real world if you want to) and you don't get your license.

I am serious here.

You can count the number of current *nix/BSD virii/trojans on your
hands and still have fingers left over.

I didn't mentions worms because a *nix worm doesn't exist - probably
never will.

Ahh, you see? You see? This is a terrible travesty, and is really just
a hazing ritual.

Mind you, NPTI has no objection to a driver actually parallel parking (PP) his or her vehicle, but we think it is an outdated and unecessary thing to have a person actually have to pass a test showing that they can do PP.

Now there is a question about the amount of space that is used up by PP. At this time, NPTI respects the right of those that do PP, but if the People who PP fall significantly, we will have to revisit that question. Certainly if enough people do not PP, that space would be better used by other methods of parking.

Why anyone should be forced to PP is beyond me.

- Mike KB3EIA -

President, NPTI

'zactly.

A lot of us were mad that the clueless promoters had ruined the whole festival
scene by their incompetence. Even 30 years later there were problems doing
another one.

Give me the Philadelphia Folk Festival any day. Well managed, excellent acts,
good sound and video, well behaved crowd and it's been held every year since
long before that place in NY. People take their kids and grandkids. No visible
booze or drugs.
>

>It's the only album where I've heard Joan singing the song "Sweet Sir
>Gallahad" ('least I think that's the name of it) and gosh I like that song.

Never bought the album - it was so overplayed on FM radio around here there was
no need to. Saw the movie on PBS some years back and was amazed at how awful it
was. But they both made a pile of money. Good ol' cappitalism...
>
>> Remember the song "Woodstock", made famous by Crosby Stills Nash and
>> Young? It
>> was actually written by Joni Mitchell (who also performed the first
>> version).
>> But Mitchell was not at the Woodstock festival at all!

Turns out CSNY had talked her out of going because she was to be a guest on the
Dick Cavett show (remember HIM?) and they said she'd never be back in time. Of
course if she'd gone they'd have given her serious stage time.

Then they got themselves helicoptered in and out of the festival, and crashed
the Cavett show. They wound up being interviewed along with Mitchell, who said
only a few words because, after all, she wasn't there. The look on her face
said it all....
>>
>> The summer of 1969 was when human beings first set foot on the moon.
>> That's what I think of first when that time is mentioned.

>Yeah, Summer 1970 saw the tragedy at Kent State...the beginning of the end.

End of what? Looking back, I'm amazed only four died in the Kent State mess. Days of near-riot conditions, kids throwing rocks and teargas canisters back at National Guardsmen (who were untrained in riot control)? KS was not a nonviolent demonstration.
>
>By the way, I'd have guessed you were an old hippie, Jim.

Not me. I could never afford it. I went to engineering school, remember? I always thought that to build a better world, one had to know how to build things in the first place. So I learned how to do electrical engineering. And I'm still at it.

There's no substitute for actually knowing how to do things, and doing them. Remember the movies "The Magnificent Seven" (actually a remake of "The Seven Samurai"? The farmers (productive people) does not need the bandits (moochers). But the bandits sure need the farmers!

Some good things came out of those times. Those are the things to remember.

>At least there's still a few left upholding the original ideals.

Yeah, baby!

Actually, you might be surprised at how simple my "ideals" really are.

>I gave up.

Not me.

A real specific answer ...

> How many *US* licensees are members of NCI, Carl?

Thousands, and growing every day :-)

> btw, the FISTS member list is online.

If you took the time to look, and it's public, why didn't you answer
my question?

However, we *don't* publish our membership list ... we respect
the privacy of our members and keep the data they give us confidential,
don't sell it to SPAMers, etc. Part of the reason is the abuse that
some PCTAs dish our ... why would we subject our members to
abusive e-mail? (Yes, I get the occasional rant, but that's what
the DEL key is for ... but I'm inherently public because of my
office in the organization.)

No, what it takes are rational, compelling arguments that support
your position ... NCI had them in the case of WT 98-143, the
PCTAs couldn't come up with ANY (because there are no rational,
compelling arguments for keeping Morse testing).

> What do they do for an encore?

We present more rational, compelling arguments, of course.

Of course participating in the regulatory process is a "political" thing.

And yes, FIST's position in the past (and IIRC, their charter) was
that they were *not* a politically-oriented group ... just a group that
was supposed to foster the *use* of Morse. And the test is *not*
necessary to use Morse ... someone sending slow as they learn
(voluntarily, because they *want* to) hurts nobody ... even the ARRL
has stated that the best way to learn Morse is on the air. Keeping
people off the air until they learn Morse to some specific level of
proficiency is counter, not just to the ARS as a whole, but to the
professed goal of those who want to keep Morse testing. If they'd
welcome folks whether they could beep or not, they'd stand a better
chance of gaining "recruits" than they do by acting crappy to those who
aren't interested in Morse, trying to keep them off of HF, and then
complaining that they don't "realize the benefits of Morse." After that
sort of treatment, no wonder so many folks aren't interested in Morse
(or ham radio for that matter ...)

> FCC Invites Comments on Six Morse Code-Related Petitions

The ARRL has direct links to (some) of the *petitions* that the
FCC has put into "docket items" on their website.

There is no link to a Public Notice from the FCC, seeking comments
on *any* of the petitions, nor has one been published by the FCC
to the best of my knowledge, and it certainly hasn't been published
in the Federal Register. I follow those sorts of things because I am
involved in radio regulatory matters professionally.

Technically, the FCC hasn't asked for comments yet ...

That's precisely what Kim intended her call sign suffix to be equated
to, by her own admission. If she had chosen the call sign W5EYE,
or W5EAR, or W5TOE, we would not be having this debate. However,
she chose W5TIT, which she specifically intended to draw attention
to her allegedly spectacular bosum. Having done so, she has called
attention to her secondary sexual characteristics in a manner which
incites puerile interest, and serves to create an image of herself and
all other YL hams being more in keeping with something in a strip
club than in a wholesome, family-oriented activity such as ham radio.
The impropriety of her self-selected Vanity call sign, and her "in your
face" attitude toward it, clearly reveals her true intent.

the "original" worm, the morris worm, was designed to bite on BSD-based
OS'es, and it hit BSD and derivatives, including SunOS and Ultrix.
Linux has complimentary GNU and OS daemons that have BSD roots. if the
original vulnerability was copied from open source of the late 80s,
there might be an entry for Morris.

please to do your research.

Worse, Microshaft doesn't *want* it fixed. If they closed all the holes how would they ever check out your
computer when you sign onto their update website?
When you hear that "another security hole has been found in Windows xx" and that Gates et all are scurring to
"fix" it, say "Yeah, Right!" They'll send out a patch that will neutralize that particular vermin, but the main
bang is still as holey as a moth-eaten cotten curtain in a 1940's flophouse.

Yeah, true. For the most part it is merely an accessory to ham radio, but
not ham radio itself. That pretty much sums up my opinion of it.

> "just paid for his license"?

I certainly don't mean the $12 testing fee (by the ARRL teams, or the equvalent amount for teams under other VEC's).... Yes, some people have probably "bought" their licenses in the past.... There were some VE teams in this area busted about 8 years ago for doing exactly that (supposedly, an extra cost $1k).

I disagree. All the "hard" questions in the current Element 4 came from the Element 4A part of the former tests. The former Element 4B was much easier than 4A.

NOT SO FAST: It was processed on April 18th, not the 15th. However, that is still the day before the first "no-test" upgrades were processed, so we can still tell that you have either a 20wpm extra or a waiver extra (based only on the date - obviously more info needed to know which one of those). The first "restructured" sessions on 4/15/2000 had results processed on April 19th.

Of course, your address change in December 2000 will obscure that fact for most of the callbook users out there... but not me! ;-)

What I fould really obnoxious is that for some test sessions in April 2000, some VEC's had problems when the FCC changed their submission formats slightly (because of the rules change) and some April sessions didn't have results show up until mid-June 2000. It is possible that some 20wpm extras didn't have their licenses issued until AFTER April 18th and by date are indistinguishable from what some in this group called "extra lite."

The thought occurred to me because you've spent the last several years trying to sexualize Kim's callsign. I can remember back when I first ran into this discussion. At the time, since I hadn't noticed her callsign before, it took me several messages to figure out what you were talking about. I ignored that discussion and didn't respond to the topic for several more months (many dozens of messages later).

The procode test is a minority position? I am in favor for retention of it. Just because I personally do not like it, nor find it useful does not mean I wish it to go away.

> >

Yeah, but I bet the overwhelming majority wish things would roll back to where it was at least 15-20 years ago, and that is where I think it should return to after seeing how things are after being licensed (not including all participation, just licensure) for 3 years, I think it should be as well. I am sick and tired of people that start (I mean locally at least) saying something, or attempting to get a project going, but hold off as to

"check with the ARRL" for "approval." Think for yourself I say. Only rules I will follow are the FCC's rules.

I haven't taken a side one way or another in this whole BPL issue as I am the first to say that I do not have much knowledge nor had the opportunity to review the whole situation, but I would find it hard to believe that the arrl is the only one that has a lab in this big country of ours..... That was the intention to that particular response....

Don't know as I have never been to their facilities but the information that they give as well as other publishers is enough for me to either become more interested and research further or to turn away from the product.

fatter.

I have the past 20 years or so, and since they have been with the 8.5x11"
size format, they have been getting thinner. I have not picked up the past
6-7 months though, as there now is no place to purchase it locally. The
closest location that carries it is Flint, which is about 75 miles away.

I still think that it would be helpful to alot if there was something for
the beginners as well as the expert electronics buffs.

How
> much are most small-circulation non-industry publications?

Right now, I think it is either 2.95-4.95 per month per mag. (QST and CQ
when I can find them) That is what my budget allows for the two magazines
at this time. Until financial circumstances get better, 40 bucks at once
out of the "entertainment" part of my budget, as that is where it would fall
categorically, it too much of a hit at once.

To all my friends, combatants, debaters and lurkers here in r.r.a.p,

I will be going under the knife this Tuesday for surgery on my lower back and won't be back for about a week or so. I am quiet sure that I am not going to feel like being in the upright position for the next week (or doing much of anything for that matter) , so everyone have a great week and probably next week I will have a ton of catching up to do.

Hope everyone had safe Labor Day Weekend and catch ya all in a bit,

Are you kidding? I busted my tail this last weekend. In addition to moving to a new apartment (and cleaning the old one), I sold an old computer, spent days shopping for a new computer, took my wife's car to the shop (had to get it running well enough to do that), and more. At this point, I darn glad this last weekend is over. I still have a ton to do, but it can be spaced out enough to get a break occasionally.

Maybe it will make a difference, maybe it won't. But no matter what happens,
there will have been a proposal and a lot of commentary opposing the dropping
of all code tests.
>

True - the "fashion" for the past 25+ years has been to reduce the license test
requirements - code *and* written.

FISTS doesn't sell anyhting to spammers. But FISTS members aren't ashamed of
their membership, either......

FISTS members can publicly disagree with the FISTS petition and stay members.
(The response from the membership has been overwhelmingly positive, though).
But an NCI member cannot publicly disagree with the NCI petition and stay an
NCI member.

Maybe you don't see any problem with that....

What about SSB NTS nets? Are they anachronisms?

A CW NTS net can handle more traffic in less time using less spectrum than an
SSB NTS net. Been there, done that.

Larry, is this the same wholesome, family oriented activity that your
"friend" has sent QFU on the wholesomest mode in?

How can you remain "friends" with such a person?

What did Riley say when you quizzed him about it?

Right. So where NCI is purposely a politically-oriented group, and
behaves accordingly, FISTS is specifically a non-political group who
is now behaving politically.

Why don't we hear any whining about how FISTS has broken with their
charter from the people that are always whining about NCI?

Usual PCTA double-standard?

The A number one reason for window's vulnerability to worms,
trojans and viruses is every program runs with "root" privileges.

Only a total fool would run a *nix operating system that way.
There is a 1000 to 1 difference in vulnerability between any
*nix, and windows.

Of course it is of some use. So is a cell phone, a chat room, voice or
text, or an intercom system.

But that doesn't make any of them "Ham Radio."

And I'm only licensed since 1999.

One person's opinion ... and a person who clearly has a pro-Morse bias
from his ham perspective. He's the ONLY EMS person I've EVER heard
from who seriously considered Morse a truly valuable and necessary part
of emergency communications, and I've been involved in emergency
communications for over 25 years.

> However, with all due respect, Carl, I don't
> think you'd be the most effective salesman for the mode...

It's not my job to be a salesman for Morse ... that's up to the people
who like Morse and care to promote its use ... but they shouldn't
insist on a govt. enforced "recruiting program" (which as I have pointed
out is, in my view, actually counter-productive as it turns more against
Morse than it "sells").

> >
> >Just as the CW NTS nets are anachronisms ...
> >
> What about SSB NTS nets? Are they anachronisms?
>
> A CW NTS net can handle more traffic in less time using less spectrum than
an
> SSB NTS net. Been there, done that.

But let's face it ... most of the traffic handled via NTS is 1) of little/no
importance
and 2) much makes use of "coded messages" (sending a canned message number)
that would be of little use in an emergency situation where the situation,

needs,
details would need to be spelled out in some detail.

Sorry, the "Morse is necessary for emergency communications" argument
doesn't
hold water, and the FCC has already realized that.

I've explained out committment to our members' privacy. If FISTS
doesn't have the same policy, that's their choice, and thus, you could
have answered my question without breaching any confidence. I can't
do the same because of the committment we have made to our members.

Carl, with all due respect, "rational and compelling arguments" are in
the head of the beholder.

Why do you do people a disservice by suggesting otherwise?

I have read both documents, and find the NCI and FISTS proposals
equally rational and compelling.

In the end, it all comes down to what a person **believes**. And that
is not rational. Not in your case, not in mine. And too much of the
"belief" business and it turns into religion, which some PCTA'ers have
```

been accused of. It all works both ways.

Let's face it- Carl just hates Morse code, despite his many protests to the contrary. It's really not that difficult to understand - after all, he hears all that digital data flying past his ears and the old nternal modem just won't work on it! Ah, the pain! The Frustration! The Agony!

You just can't help sympathyzing with his plight. The ONLY way for him to find relief is to slay that dreaded dragon under the bed.....

I see a problem with it, and I wouldn't join even if I was in favor of
discontinuing the Morse test. I don't hold with organizations that
demand I toe the line in all things. Tolerance of dissent is needed for
a healthy organization or country.

Mike:

You and your NPTI are just like all the other NPPTA (No Parallel Parking
Test Agenda) whiners. You just want to dumb-down the driving test so
that any dummy who is fed up with riding his bicycle can just knock off
a simple, multiple-guess written test, then get into a Buick and hit the
road just like us Real Drivers(tm).

I think that not only should Parallel Parking be a requirement on the road
test for a driver's license, but Parallel Parking Proficiency should be
demonstrated at a rate of at least 12 Parallel Parkings per hour (pph).
After all, if you cannot Parallel Park time after time, in a variety of driving
conditions, then you cannot expect to be able to operate a motor vehicle
successfully in the typical urban driving environment.

I hold a Class B Commercial Driver's License, and to pass my road test,
I had to parallel park a 30-foot long bus. I passed my test on the first
attempt, with a perfect score. Any driver who can't park at least as well
as I can is nothing more than a lazy, unmotivated, dumbed-down whiner
who wants the world handed over to him or her on a silver platter, since
all they have to do is parallel park a Dodge Neon or something similar.
Of course, now that Toyota has eliminated the need for most drivers to
parallel park, they'll probably be sending PRM's to the DOT and, with
enough whining, will get the Parallel Parking test reduced or eliminated
in the next "restructuring" of the driver's test.

I'm going to start a new organisation called PHISTS -- Parking Has
Important Status To Safety. We will encourage the use of Parallel
Parking by sponsoring awards programs for drivers who participate in

local parallel parking demonstration events. Attending 100 such events will earn you your PHISTS Century Award. Other awards programs will be announced in the future.

As far as I'm concerned, you NPTI/NPPTA whiners can go fly a kite. You will never achieve the status of us Parallel Parking Tested drivers. We're better than you, and we can prove it! You couldn't park a Prius on a football field!

To whom? And you'd allege that there is no other possibility ? Sure sounds like it. You *should* know that even health and welfare traffic is important to the mission of the ARS, as it not only relieves worried families etc but also gies important exposure to the capabilities and mission of the ARS. Sorry you missed all that.

> and

> 2) much makes use of "coded messages" (sending a canned message number)

N onsense bafflegab! Have you ever worked a *real* disaster/emergency of any consequence? Sure doesn't sound like it! And for your edification, the "canned" mesages, right along with prosigns and the many other CW shortcuts merely add significantly to the efficiency of the mode. But of course you can't allow such information out into the public domain, if you can prevent it. BUT, you can't!

>
>
> Sorry, the "Morse is necessary for emergency communications" argument

BS! FCC has never made any statement even close to that, and WE all know it. One NEVER knows in advance what will be needed to deal with any unforseen emergency/disaster. We all know that, and of course you do too, but it works against that enigmatic agenda of yours.

If CW does enjoy a 13 dB advantage over SSB, avid DX hounds will
choose to learn it and use it on their own. No need for a license test.
CW makes for small bandwidth combined with simple equipment.
NASA doesn't use CW with its deep space probes, but they have
fancy equipment on both ends. I mention this in that NASA does the
ultimate in weak signal work, something CW is usually good for on
ham bands with simple equipment and trained operators. But there's
no CW op on the space probe.

Or we could do an "either or": For the extra, pass element 1 or a new
element 5 (a tougher written) with your general license. And for the
general,
either element 1 and the general written, or the general and extra writtens
with your tech license.

Can't you think of a better reason? Let's say there are 5000 members of NCI.

Explain how saying There are 5000 members of NCI is violating anyones privacy.

> Then the words "rational" and "irrational" have no meaning.

1. Everyone here thinks they are being rational, unless they are being purposefully non-rational. (say Bruce for example, who is having fun baiting people - and even in his case, take note that when he is starting to be serious his spelling and grammar become correct)

2. You really aren't that far from the truth.

3. Insane people are exempt from all this. But there really aren't that many insane people.

My rationale is that what is or isn't rational is based on the starting assumption or world view.

If your basic assumption is that things should be simplified or to be made easier, then you would agree with a proposal such as the NCI proposal before the FCC. It is rational and compelling from that viewpoint.

If you believe that simplification is not necessary or desirable, you are more likely to find the FISTS proposal rational and compelling.

We have never said anything like that! We support the rest of the
testing procedures. Besides, we must be inclusive, and not turn
potential drivers away because of basic skills.

> I think that not only should Parallel Parking be a requirement on the road

That's what NPTI is working toward. Why should people have to learn an
outdated skill like PP? Heck, the next thing you'll want is for people
to want to know how to drive a standard transmission or to know how to
use buggy whips. All you anachronistic types are just holding driving back.

I changed the subject header, because it has nothing to do with the 'code'.

You are the one that is confused Brian. I never said a thing about Woodstock and Vietnam and Thailand.

I said I was discharged in 1968. And yes I was in Thailand several times during that period. I was also in Vietnam during that period. In fact, just to make you happy here is a list of countries I was in from November 1965 to April of 1968.

Okinawa
Japan
Phillipines
Taiwan
Thailand
Vietnam

All of which were TDY (Temporary Duty) from Okinawa.

In April of 1967 I went for a full tour to Vietnam, leaving in April of 1968. Went stateside for 3 months and was discharged in July of 1968. Was placed on inactive reserve status for two more years in order to complete my 6 year military commitment.

There is more, but this is pertenant to the discussion.

After returning stateside and dropping by to see my mother I bought a 1 way ticket to Bangkok Thailand. Where I lived in between working in South Vietnam as a civilian contractor. I returned stateside December of 1969.

Any questions Brian?

Please explain to the audience then, how, one can have basically no knowledge of Morse, then get on the air and try to improve it? You MUST have a rudimentary knowledge, in otherwords something to work with, before one can proceed.

I think 5 WPM is a fair requirement.

I think total ellimination is equivilant to negotiations with a terrorist organization (NCI).

They don't care specifucally about the ability to park. They just want
you to be
able to demostrate your ability to handle your car to some level of
control. Parking
is a safe way to do that, vs say flying thru a tollgate at highway speed...

The original poster claimed I said I was in Woodstock and Vietnam. I never claimed that. In fact I was in Thailand when the moon landing happened. As I recall that was around the same as Woodstock.

I really didn't care in anycase. I certainly wasn't going to wear my short hair to that place.

A very well thought out and crafted petition, Hans. It makes a lot
of sense.

I'm not sure that the Commission will go for an indefinite-term
license, even though the Comm Act appears to permit the Commission
to set terms of licenses by rule for all classes of stations except
broadcast stations which is set by statute.

Maneuvering at slow speed is an entirely different skill set than that required for typical driving speeds. Both must be practiced and one's ability in parking maneuvers will not give any indication of driving ability on the street and vice versa. This happens to be the first place I've ever been where flunking the parallel parking basically leaves you no leeway (it's worth 5 points and you can only miss 6 altogether on the parking lot maneuvers). I haven't yet formed an opinion on whether this is good or bad.

The backing into a parking space seemed an odd requirement, as some places, if you back into the space (in the real world), you can be ticketed. Again haven't decided if this is good or bad.

The pulling up to the line seems eminently reasonable though.

If they wanted to check your ability before risking their necks on the road with the examinee, it might be better to have them drive around a set of pylons at a more normal speed than the ultra-slow parking maneuvers.

Also here in Michigan, the driving tests are no longer administered by the state but by the driving schools. It costs $45 each time you take the test although if you fail, part of that is refunded. The fee is on top of what

you already paid to take the Segment I and Segment II driving classes. For those of you not familiar with Michigan, the schools do not have Driver's Ed classes anymore. They simply coordinate a schedule with a driving school. I forget the fee for taking the class ($200 though rings a bell).

This is substantially different than it was a few years ago. It's also quite different than the state I grew up in and the state where my older daughter got her license.

Anyway, the state made things tougher in an attempt to reduce teen accidents. It's apparently been to short a time to evaluate its effectiveness but preliminary info indicates it may be helping.

>potential drivers away because of basic skills.

Mike:

Without basic skills like PP, drivers will become mere appliance operators,
totally dependent on the technology in their cars to do their parking for them,
rather than being able to do it themselves under severe, emergency
conditions. PP is a very practical, effective, efficient, and universal way
to park an automobile, but we can't make use of this technique unless
drivers know how to do it. Only a testing requirement will give them the
incentive they need to learn.

>Dan/W4NTI

Dan:

Does that also mean they favor retaining code testing for a General or
Extra class license? If so, how hard are they going to work to keep the
current code testing requirement in place?

If the ARRL truly supported code testing, then "Restructuring" would have
come out a whole lot differently, perhaps keeping a 12-WPM test for
Extra. That didn't happen, and it's because the ARRL wants code testing
dropped, for the sake of (hopefully) getting more people licensed and
becoming members. It is their never spoken, hidden agenda.

Supporting "CW" and supporting code testing are two separate and
entirely different things.

You spent too much time in England. When my tire goes flat on the highway,
I call for help. It's too dangerous to do this on the side of the road,
alone, at night, in the rain (Lions and Tigers and Bears, Oh my). I
couldn't resist!

I don't have reliable evidence of any such fraud by either FCC or oldstyle
volunteer examiners (no caps).. Doesn't mean it never happened, just that I've
never seen any.

There *was* a vanity call selling operation that got an FCC employee time in
the Federal pokey (see posts by K2ASP for verification). And many of us
consider what Bash did to have been a rules violation.

One scam that was going on back in FCC days were a few people taking tests for
others. FCC started asking for ID and taking signatures.

>There were some VE teams in this
>area busted about 8 years ago for doing exactly that (supposedly, an extra
cost
>$1k).

omigawd...

I occasionally see enforcement actions in the log where FCC calls people in for
a retest. Some do not show, some do show and fail, some show and pass.

>than 4A.

Well, we'll have to agree to disagree on that. But consider this: Old Element
4A was 50 questions and old 4B was 40. Each was graded separately, so if you
were even one short on the allegedly harder 4A, you could not even get to 4B.

New Element 4 is 50 questions from a combined pool. So if old 4A was "hard" and 4B was "easy", then combining the two and reducing the total questions from 90 to 50 effectively dilutes the test.

btw, I passed old 4A in 1968 as a 14 year old in the summer between 8th and 9th grades. Back before Bashbooks and question pools. How hard could it have been?

Sure. Point is, the same can be said for any license class. Just having an
Advanced proves only that the person did 5 wpm once-upon-a-time

>> Fun fact:
>>
>> From May 14 2000 to July 31, 2003, the number of Advanceds dropped from
>> 99,782 to 83,141. That includes upgrades to Extra and dropouts. Only a 17%
>> decline in over three years.
>
>You should probably go back another 29 days to have a good total: Many
>upgrades happened in that month you omit.

The reasons I chose May 14 were:

1) I had those numbers available
2) It is long enough after April 15 that any pre-restructuring applications had
gotten through the FCC "pipeline".

And I am sitting here so wowed with your intellect, Dan, that Bo Pilgrim is second on my list of mentors now.

You are filthy, wretched and disgusting. I have never (even in Larry Roll) seen the equivalent to the blabbering garbage that you put forth hear in this newsgroup and it's as simple as that. You're as predictable as Len Anderson, and that makes you pretty damned boring. You spew forth with comments that prove to me that your lacking in social skills and never cared about making up for it.

You have nothing but contempt for fellow human beings and it's because you seriously lack any form of humanity that would cause one to at least consider you worth listening to. You bring about your own sorry ass way of life and bring the rest of the world down for it, indeed dream it up in your little head that it's all "their fault."

Then, you run into a woman of high intellect and your stooped so low for desperation to be able to one upmanship her that you swing into extremely low gear with nothing but name calling. Proving the points I have just observed about you. You are as worthless as dust in a waterless environment. No one here, in my opinion holds a candle to how wretchedly low you really are.

Kim W5TIT

I was there the day before delivering lunch to my Dad...He was
director of communications for KSUPD at the time. I was at Brown
Junior High when we all got sent home suddenly...I found out about the
shootings when I got home and turned on the scanner.

I later joined the KSU Amateur Radio Club (K8GRA)when I got my
Novice in October of 72...a perk of being the dependent of a campus
employee.

I had a chance to see the damage done by the students to the new
Tower Dormitories on the south side of the campus...It was so new that
some of the rooms still had new plastic on the matresses and it smell
of mothballs...Trashed beyond recognition in some places.

Hmmmm, the ASCII format document with just the list copied and pasted into a MS Word document shows to be 5,193 paragraphs, which would be members--presuming there is one line/paragraph per member. That list is labeled as "Active Members."

Remember to block them also. On the web, we can "visit" websites we
never go to. Block all the ports you aren't using, and use a wall like
ZoneAlarm AND a proxy server.

Sure been to Ravenna. You know this Kent thing was really a bad deal. I
was a vet of the VN bullshit, but I really had a lot in common with the
'kids'.

When I left out of the Kent area that evening...I told the guard that this
BS about Nixon invading Cambodia was BS. I was in Cambodia re-supplying US
troops in 67. And in Laos too. He was rather shocked. Oh well. Yes
indeed the US Government lied.

Paranoia will destroy ya. Fear is a strong emotion. I'm not so attached to
my property that I'd let fear determine where I live and worry about what
someone else does on theirs. But, I also don't buy my place for
investment--so to speak. I bought my place (with my hubby of course) to
stay. This is the first land and home I've had, and no doubt will be the
last. I plant roots...spent too much time being a Navy brat.

Most people like to romanticize about that period in this country's history.
I don't know how it was here in the Dallas TX area--most people I've talked
to who were around my age and a little older were too busy going to drive-in
movies, necking, getting pregnant and getting married. Not very many
politically motivated debates down here, 'least not the way we used to have
'em at the drop of a hat up there!

But, what little we could do in our little town up north to protest the war, we did. We had a black arm-band day at high school; we had our graffiti on our bookcovers, etc. Not much to do in a little town. I don't remember, though, many folks who were "for" the war--other than our parents. Most of the guys I knew got drafted; most of the gals I knew were saying buy to their guys most of the time. And, the country was in upheaval. I'd not like to go back to those days at all. It was NOT a peaceful time in our history.

The Yippies (now the Yuppies and everyone gets them confused as old hippies; they are not, they were Yippies) dragged the whole thing into violent protests. A true hippie would no more pick up a rock or spit at a cop than the man in the moon. The Yippies were extremists. Now, they're a bunch of pussy sell-outs who bought lock, stock, and barrel into the system they used to say they "hated."

Naw, most of us were pretty grown up in our town. They'd been just as well going at 18 as 14-15. And they were. Most of them had a great time. Then, later, that concert happened up in...where was it--the race track (?) up in NY...OH YEAH, Glen something? Is that it? Well, anyway, by then I had my kids and wouldn't have gone for the best of times.

> nonviolent demonstration.
> >

I think that was when "we" as a counter-culture began realizing that we and "they" had limits and that we had to start growing up with our approach to democracy. The unfortunate thing that happened out of the 60's is that on all campuses today, one must have a "stamp of approval" to organize and post things on the wall. While I'd not like to see the mob mentality as it was, it's a pity that our youth aren't exposed to true, true democracy in action, which, in my opinion, does involve activism. I applaud the TX Democrats who wouldn't give in to the pressures of an immature jerk here, who is called the Governor of this state.

>
> >By the way, I'd have guessed you were an old hippie, Jim.
>
> Not me. I could never afford it.
>

Wow, wonder what part you're speaking of. We all lived with our holey jeans, drove clunkers for cars, partied in fields, etc. LOL Nothing about afording anything with these guys. Let's see, our "swell" of hippies was aged from about 12 to 23-4. We lived in a small town, so big brothers and sisters always had little brothers and sisters with them; and every darned one of us was friends--I do miss that. Heck, my little guy--first born--was at more field parties as a baby than he's ever been to the rest of his life! First day out of the hospital we landed at a celebration near Hedges Lake, in a great big field to welcome Fall and have our last bash before Winter. Oct. 20, 1974. Guess what else we were just getting the chance to celebrate!?

Well, we had guys who went out of High School into Physics, Liberal Arts, and other Sciences. We loved for them to come home and tell us the tales of college life. Heh heh, my biggest kick back then was seeing Alice Cooper at a Hall on the campus of Plattsburgh, NY.

I know what you mean. I have such a huge list of to-dos during the
summer that I have come to hate summer and most of the holidays.

In addition, I have an Alaska body thermostat. So I've learned to love
the winter.

And you picked up on my comment about Woodstock and Vietnam. But you
commented about Vietnam, Thailand and Kent State.

> You are the one that is confused Brian. I never said a thing about
> Woodstock and Vietnam and Thailand.

You said something about Vietnam, Kent State, and Thailand. For
example, here are your words about Vietnam and Kent State:

```
------------------------------
My my Brian....how is it so hard for you to figure a person could be a
veteran of VN and be at Kent State also?
------------------------------
```

So the only confusion is yours. I hadn't commented on Vietnam AND
Kent State.

And here are your words about Thailand:

```
------------------------------
I went back to Thailand as a civilian
------------------------------
```

The only problem is that the topic was Vietnam and Woodstock.

> I said I was discharged in 1968.

So you did.

> And yes I was in Thailand several times
> during that period.

Again, what has this to do with you being in Vietnam?

> I was also in Vietnam during that period.

And there it is. After all the obfuscation about being in Thailand,
you finally come clean.

In fact,
> just to make you happy here is a list of countries I was in from November

My basic assumption is there are some things the government should be
doing and there are some things that the government shouldn't be
doing.

We could start with the Constitution of the United States and its Articles, and try to find the rationale for a welfare state.

Brian

The ARRL plan is to purge all the good hams from the organization. You're just another one. With fewer good hams in the membership there will be less opposition to the agenda of supporting and pushing policy to further dumb down the Amateur Radio service. Hiram Maxim is turning over in his grave.

Why is there never a wouff Hong around when you really need one?

How about those Hams that have a narrow focus on Morse code, HF, contesting,
and antennas at the exclusion of other activities.* Furthermore, these same
Hams have little interest in the technical aspect of amateur radio. Now, THATs
dumbing down the amateur radio service.

---
*For example, the person that leaves ARRL (which supports a wide range of
activities) and joins FISTs (which has a narrow focus of activities).

Please, lets not talk about the weather. This is the south - the place with months of hot, steamy, days. And this last weekend was certainly no exception. I prefer cooler weather also. I can get ten times the amount of work done and not suffer nearly as much.

There's nothing wrong with a little self-esteem. Instead, as you suggest, the problem is being full of it (and, yes, the double meaning was intended).

But a bigger problem is what they expect from others based on that bloated self-esteem. Too many today expect way too much respect from others, far beyond what is routinely given to just another human being. It's not just a coincidence that he or she "disrespected me" has become a common complaint today. Many feel they don't they have to do anything to earn that extra respect - it should be given just because they're a wonderful human being. Of course, when that extra respect is not forthcoming, they feel cheated.

The schools do a fine job of installing plenty of self-esteem. However, they fail at also making those kids understand than anything beyond basic respect has to be earned - it's not just given because you happen to exist.

> (snip) Oh, yeah. Get the kids thinking about
> something other than what's happening 5 minutes

Yep, we went from "Father Knows Best" to father is an idiot. Something in between is probably more realistic, but television rarely shows realism (even on the "reality" shows).

> - People of all kinds live in spacious, clean, well-
> organized homes, yet rarely does anyone need to actually
> DO anything to keep them that way, or pay for them.

More lack of reality television. And you can go on. For example, you rarely see anyone under a hood trying to get the car started because they have to get to work - perhaps to get away from the bad guys, but rarely to get to work. People roam all over the country, and the world, on television, all without any noticeable income. Where can I get a job like that?

> - (This is my favorite) NOBODY *on* TV spends much time
> actually *watching* TV. Particularly children.

That is so true. I see kids planted in front of a television everywhere I look, except on television.

> Cable TV broke those taboos in the '70s by arguing that

Sadly, other than turning it off, we don't retain control. Even the unexpected commercials are inappropriate at times.

The top 10 reasons the University of Central Florida banned the
Ham Radio club.

10. They needed to make room for all those computer hard drives to hide & store
copyrighted MP3's on.
9. The fraternity needed a bigger room to store their beer kegs in.
8. The UCF staff wanted a better place to watch porn for law students so they
will recognize it when they see it.
7. The liberal UCF professors confused the Amateur Radio club antennas for a
anti-Castro broadcast station.
6. The cheerleading squad thought the radio waves would make metal wired bras
burn their breasts.
5. The football team required another place to hold their gang bangs at.
4. The President of UCF believes the antennas are really controlled by space
aliens and they are used to send him secret messages.
3. Only nerds carry around a free radio communication systems, cool students
carry around $200 digital phones with $100 monthly service fees.
2. The UCF board thinks that radiate means radiation.
1. The UCF board thought it was a SPAM club and knows that no good comes from
people that eat or send SPAM.

The Radio Page Ham, Police Scanner, Shortwave and more.

Nearly 10,000.

Not all of them are users of code either. FISTS welcomes anybody,
unlike the NCI where you join "the cause to remove code requirements".

If you prefer to remove the code requirement, no one is forcing you do
unplug your keyer from your radio.

It works like 10-X International. I've had a 10-X number for 12
years and have remained "inactive" (non-paid member) for 11 years, but
I can exchange 10-X numbers on the air if I so choose. So reading
from the active list is very misleading.

I am however an active member of the FISTS, as you probably already
gathered from perusing the "Active Members" list.

As did my father.

As for me, my Extra class license showed up in the mail a week before
my Advanced licence. This of course was back in 1992, and the FCC was
getting better about issuing licences, instead of the 6 month wait
like I had to go through with the Novice licence.

It should have never been heard on your "local Echolink repeater" had
the control operator pulled the plug on the Echolink. This is a fact
of life when you tie a repeater system into an internet connection.
Increasing the chances of it happening more often than not.

> There just isn't enough control of all the repeaters linked into
>Echolink for it to be a viable system.

Sure there is. In your case, a responsible control operator, who
values his/her radio's, and the license attached to the linked
repeater.

I can attest to that. Having been without an antenna for nearly a
year some time ago, my speed fell way off, but I retained what each
letter in code was.

Contests are a good way to get the code speed back up to snuff in no
time, if you're "rusty". Of course, the first few hours are a beast,
but by the time the contest is over, you're working QSO's in your
sleep. LOL

Actually the Farnsworth method is Morse Code sent at a constant rate
of speed, 18 WPM actually, yet at lower speeds the spacing between
each character is increased while attaining the same rate of speed of
18 WPM for each character.

By the time one becomes proficient enough to copy Morse Code, counting
out the dits and dahs is moot at best.

Which is why I haven't had cable since 1979, and why the sole TV here spends a lot of time off. That's the main weapon of the marketplace.

All the ARRL ever was, is, and ever will be is a
publishing company with a 501(c)3 tax exemption
that wraps itself in fake ivy leaves of academia.
Another typical "non-profit" that milks donations
from suckers with trinkets and who's Corporate
Board and Executive Staff members skim 50%
right-off-the-top for "administrative expenses".
I dropped them, my SCM, and my membership way back
in 1984 and I've never regreted my decision.

Hi David,

The utility you seek is called a firewall. It will inform you of any utility that is trying to reach the internet... Even really buggy ones like IE and OE. The best free firewall is from ZoneAlarm. Do a google on "firewall zone alarm" and you will find it with no problem.

When your pet program tries to call home, zone alarm will pop up a screen saying application such and such is asking for internet access allow it? If it is IE, or OE, though you should probably say no, say yes. If it is anything else that you don't recognize, say no.

Once you have identified the application, it is fairly trivial to remove it. Do a search on the application name (eg. wincfg.scr) and delete all occurances. You will also need to search your registry for any entries that have the application's name, and remove them.

If you find your utility programs like regedit, and msconfig start and then dissappear, you will need to go into your window's directories and make renamed copies. (eg. myregedit, and mymsconfig).

Then go into regedit, and search for the application's name, and remove it. And go into msconfig, and look for the application's name in the startup list, and remove it there too.

Hi Brian,

I believe I can answer that for you. The GROL is a lifetime license. Once
earned, there is no renewal.

> in these parts.

I've tried to suggest to various TPTB that I have noticed NWS and Skywarn should not rely upon IRLP. NWS in Taunton often calls up Western Mass, which has some nice repeaters linked via IRLP(keep this and drop echolink). However, NWS is using a repeater at the Coastline that relies upon cable internet. I did say to one guy that they should get their own T-1 line for such work.

How is NWS going to communicate when Fabian hits the coast of Eastern Mass and knocks all the power?

I once went without power for 2 weeks. I've done a lot of durations of 1 day or less. Echolink & IRLP are on very unreliable footings.

There wouldn'd even BE a GROL today if it wasn't required for a few obscure operations by international treaty. The FCC would
do away with it in a heartbeat.

Good advvice. Anyone who hasn't ran Zonealarm will be astounded at how often other computers try -for whatever reasons- to intrude into yours while you're online. Zone Alarm tells you when it happens, and the domain from which they came, tho it isn't that easy to find out where it is since it's the numeric domain code.

Stacey> the spacing between each character is increased while
Stacey> attaining the same rate of speed of 18 WPM for each character.

I was under the impression that Farnsworth was a type of spacing but
that the actual numbers weren't relevant -- only that the word speed
is often much less than the character speed. The test I took had a
word speed of five words per minute and a character speed of eighteen
words per minute. The practice files I'm building for my web site
have a word speed of five words per minute and a character speed of
twenty words per minute.

Stacey> By the time one becomes proficient enough to copy Morse Code,
Stacey> counting out the dits and dahs is moot at best.

In my limited experience, I learn more characters faster with
Farnsworth spacing, but I'm concerned that I'm building a lookup table
instead of reflexes. It's the difference between "dahdidah, hmm,
that's K, dahdah, hmm, that's M" and "dahdidah (K) dahdah (M)". I
learned eight or nine characters with Farnsworth spacing, but I can't
repeat the performance at full speed, so I fear that I'm learning
something that won't be useful if I continue to use Farnsworth
spacing.

Bruce isn't doing good for any guy who'se any age. He's pretty much
the lowest common denominator on r.r.a.p.

> OH, I get it now. Bunion.

Yes, "bunion." Jim says he doesn't have any minions.

> I guess Kim would say, ROFLMTO!!!
>
> 73 de Larry, K3LT

You're fast approaching that lowest common denominator yourself.

Yeah, just imagine it. We can kerchunk repeaters all over the world.
Kinda gives me goosebumps to see how far we've come!

Yes, certainly in principle. Turning off the repeater is always the
option. But in reality, a person cannot keep constant monitoring for
miscreants. And if the repeater is open to the world, the person
responsible will have to keep a 24/7 vigil.

When almost everyone is well behaved to begin with, it isn't much of a problem to begin with.

It is not.

Only at 20 WPM does Farnsworth and Morse use the same character and word rate.

I think the rate may be 15 wpm, the principle is the same.
>
>By the time one becomes proficient enough to copy Morse Code, counting
>out the dits and dahs is moot at best.

Actually, those taking Element 1 have the option of Farnsworth-spaced Morse at
5 wpm or "regularly spaced" 5 wpm Morse (characters sent at 5 wpm). All VECs
can supply either if requested in advance.

The main reasons Farnsworth spacing is used are:

1) It allows more time between characters to recognize and write down

2) It avoids many of the bad habits such as "counting dits".

btw, W1AW has been sending the slower Morse code practice sessions using
Farnsworth spacing for at least 40 years

That's where practice comes in. Learn to recognize the characters, then listen to code off the air or what ever othen non-familiar source you may have available.
Soon you find that you don't use anything like a looktable any more, it just comes in as letters, and then words that you recognize like speech. The more familiar you become, the longer words begin to come through as words, just like the shorter ones did earlier, and so on it goes. You build a Morse vocabulary of words.
But it does take practice.

I do have a couple of questions, though. Which spacing is more
commonly found in "real code" -- full speed or Farnsworth spacing?
When people learn to receive code with Farnsworth spacing, do they
also learn to send with Farnsworth spacing? Those two things have
puzzled me but I haven't found any real answers.

In my limited experience, I learn more characters faster with
Farnsworth spacing, but I'm concerned that I'm building a lookup table
instead of reflexes. It's the difference between "dahdidah, hmm,
that's K, dahdah, hmm, that's M" and "dahdidah (K) dahdah (M)". I
learned eight or nine characters with Farnsworth spacing, but I can't
repeat the performance at full speed, so I fear that I'm learning
something that won't be useful if I continue to use Farnsworth
spacing.

It just takes more time than you've put into it so far. Just keep
practicing. Don't add new letters too soon. Over a period of time
gradually increase the word speed, keeping the letter speed where it is.

People tend to have unrealistic expectations on how long it takes to build
the reflexes.

It takes about 30 hours of study for the average and practice to get to a
reliable 5wpm copy. At this point, one's reflexes are still rather slow.
From that point on, is where you start diminishing the space between letters
to get the overall word speed up. To get to 20wpm, the average person will
need about 150 hours of study & practice. However, the Koch method may
enable one to shorten these. The G4FON software incorporates this method.

Nowhere is there a definition that says the character rate and word rate MUST be the same for it to be Morse. There is standard spacing and Farnsworth spacing and the variety of spacing that you hear on the air. There are some really fine operators who have near perfect standard spacing but the rest of us vary. That doesn't mean we aren't sending Morse. If you read the manuals on Morse, they give recommended element, character, and word spacings for standard operation but that is all. It does not mandate that the relative spacing meet any particular standard to be considered Morse code.

When people learn to receive code with Farnsworth spacing, do they
also learn to send with Farnsworth spacing? Those two things have
puzzled me but I haven't found any real answers.

In the real world, spacing varies all over the map. Of course the W1AW training broadcasts are Farnsworth until they pass the 15wpm level. After that, the character spacing and word spacing are the same. Their bulletins, which are at 18wpm, use standard spacing also. However, these transmissions are computer generated.

On the air, most people seem to automatically adopt a "matching" character and word speed. You get into a rhythm and a comfortable rhythm for sending is when the character speed and word speed match. So no matter what method you used to learn, you generally end up at the "standard" spacing when you send.

Typically a person can send faster than they receive. It's actually quite easy to send up 20wpm even though you may only be able to copy 5wpm. Sending is easier because you know what letter you are going to send! So when you first go on the air, you have to be careful not to send any faster than you can receive. If you don't pay attention, you will instinctively send at an overall word speed that matches the character speed. So if you at been practicing at 15wpm for the character speed, you will most likely send at a 15wpm character and word speed. The operator on the other end will come back at that speed and then you'll have to ask him PSE QRS (please slowdown). By the way, don't be afraid to ask them to slow down. They will understand as they remember when they were beginners. If you want them to send at a specific speed, you can even go PSE QRS 5 (please slowdown to 5wpm).

The more experienced operator will generally slow down for the new guy. If he is using a keyer, he may choose to maintain his character speed and slow the word speed ala Farnsworth. If the new person is still having trouble, he will then also generally slow the characters down a bit. Or he may switch to a straight key to get the speed down in the first place. Or he may go with standard word spacing right off the bat as it is a bit awkward to send fast characters but space out to slow the word speed.

It's nothing to worry about. It will all sort itself out when you get on the air.

From my inbox this evening. Anyone have the real story behind what is going on ?

I am writing to inform you of support that is needed for the Hudson Division Director Frank Fallon, N2FF. It seems that Steve Mendelsohn plans to contest Frank's re-election. Why? Your guess is as good as mine! There is no reason for Frank to be contested since he has been very active in the Hudson Division. Frank has been instrumental in being an advocate for the New York antenna legislation. Currently he is pursuing the same activities in New Jersey. In addition, he played a major role in persuading Congressman Steve Israel to introduce the Amateur Radio Emergency Communications Consistency Act. For those of you who do not know what that is; basically it deals with homeowners associations that ban HAM radio antennas in condominium dwellings, where a HAM is not insulated (via PRB-1) against this threat. Frank has done many other important things for amateur radio. In an age where amateur radio is being challenged more than ever, we need HAMS to volunteer for amateur radio for a change. Where others choose to do nothing and leave it for the next guy, Frank stands and perseveres to thrust amateur radio forward by getting the job done.

When you receive your ballot in the mail sometime towards the end of September, please support Frank Fallon, N2FF. Remember to send it back on a timely basis. Whether you know it or not, Frank IS doing the job for amateurs on some very important issues that threaten the very existence of the future of our hobby. Thanks for your time and support.

> broadcast stations which is set by statute.

Here's a thought: if an operator license has indefinite term, how do SK's ever get reported?

In Japan, operator licenses never expire, even if the operator does. So the JA operator license numbers you see are really the number of licenses ever issued, not the number now active or even alive. They can be canceled, I think, but that takes a lot of paperwork proving that the licensee is, in point of fact, actually and quite completely dead.

JA station licenses. OTOH, do expire and cost money to renew. Thus the great disparity between operator and station license numbers.

Also, when a JA ham upgrades, the old license remains on the records.

Imagine if we did that here in the USA. The license totals would be enormous, and constantly growing! Some of us would show up in the tabulations as many as 5 or 6 times.

hmmmm....

I personally like to use a Farnsworth style of sending at lower speeds. It just works
better. You hear all sorts of code out there and get used to most all of it with time,
but the stations sending slower code via a Farnsworth type of spacing are easiest to copy,
just as learning the code via Farnsworth practice makes it easier to learn.
As someone already said, it all comes together at around 20wpm anyway.
But at slower speeds Farnsworth spacing has definite advantages.

Dick

Propping up a "belief system" ("tradition", etc. ... all the things that
keep
things stuck in the past) is NOT a legitimate regulatory purpose or role.

Neither is government support for a lamebrained attitude that labels "stuck in the past" as a description of radiotelegraphy on ham radio. Try actually tuning around the CW portions and you soon see how current CW is.

Carl, you're beginning to sound like one of the Three Stooges on a stuck record - if anyone her remembers what that is. It's "old" too, but still one of the most effective of descriptives.

> BS! FCC has never made any statement even close to that, and WE all know
it.

YES THEY HAVE - from the R&O in WT Docket No. 98-143 ("restructuring")
- read it and weep:

31. We also find unconvincing the argument that telegraphy proficiency is one way to keep amateur radio operators ready to be of service in an emergency. In this regard, we note that most emergency communication today is performed using either voice, data, or video modes. We also note that most amateur radio operators who choose to provide emergency communication do so, according to the amateur radio press, using voice or digital modes of communication, in part, because information can be exchanged much faster using these other modes of communication.[1] Further, we note that in traditional emergency services, such as police, fire, and rescue, there is no requirement that emergency service personnel hold amateur radio licenses or any other license that requires telegraphy proficiency. We conclude, therefore, that telegraphy proficiency is not a significant factor in determining an individual's ability to provide or be prepared to provide emergency communications.

---

[1]See, e.g., The ARRL Letter, Volume 18, Number 7, at 3-4 (use of single side band when Hams Help Staff Colombian Relief Call Center); Volume 17, Number 13 at 3 (VHF repeaters use to assist tornado victims); Volume 18, Number 4 at 1-3 (use of VHF 2 meter repeaters to assist Emergency Operations center after tornado outbreak). See also Worldradio, February, 1999, at 6 (Salvation Army Emergency Team Radio Network (SATERN) maintaining a network of stations on 14.265 MHz during Hurricane Mitch); and Newsline, Issue No. 1129, February 29, 1999 (communications for Colombian earthquake assistance on 14.347 MHz using voice modes.)

NO, I'm saying that they know that there are more efficient, practical modes
available that better meet their needs and that's what they want ... it's up
to US
to be prepared to provide them, not try to sell them on Morse.

And plain old binary FSK has a bit more than a 9 dB weak signal advantage
over OOK Morse ... if you slow it down to equivalent data rates ...

More modern digital techniques are even better. Some produce perfect
copy at s/n ratios where even the best CW operator couldn't even detect
the PRESENCE of a CW signal, let alone begin to copy it.

However, Dick and other Morse fanatics insist that those modes aren't
a suitable option because they (dread the thought) require a computer
(and some hardware/software that I'm sure "Shannon doesn't mean squat
Dick" couldn't even begin to understand).

If FISTS has 10k members, they do NOT have "many times the membership
numbers of NCI" ... the numbers would be something that Dick would hate
to imagine in worst twisted nightmare :-)

I think that characterization is totally out of line and is equivalent to
the "law of usenet" that goes something like "the first one to equate
the other to Hitler automatically loses the argument."

Stacey,

That 10k number seems to fly in the face of facts ... but it really
doesn't matter, because it's the quality of the arguments presented
to the FCC that matters, and the FISTS petition, while well-written,
is lacking in a truly rational regulatory basis for maintaining ANY
Morse test requirement.

2880. NCI Petition available on FCC ECFS

Newsgroup: rec.radio.amateur.policy
Date: 2003-09-04 02:14:43 UTC
From: "Carl R. Stevenson" <wk3cqth@wk3c.com>
Message-ID: <nex5b.550$vj4.81352@nnrp1.ptd.net>
Source record: 76244

No Code International's Petition for Rulemaking to the FCC
was assigned RM-10786 and is now viewable for review and
comments on the FCC's ECFS site at:
http://gullfoss2.fcc.gov/prod/ecfs/comsrch_v2.cgi

(type RM-10786 in the "Proceeding" box at the upper left of
this web page to view the Petition and comments filed to date).
Apparently the "RM number" was assigned last week, along with
others on the same topic, but the Petition itself was not visible
due to some sort of file-linking error. That was corrected late
on September 2nd or early on September 3rd, and comments are
now being accepted by the ECFS.

Also, if you would mention that news on this issue can be
obtained via the "Articles" link on the main NCI web page
at http://www.nocode.org, that would be most appreciated.

73,
Carl R. Stevenson - wk3c
Grid Square FN20fm

Well, that was a well thought our and logical rebuttal in a falicious
kind of way. If a more logical argument than that can't be made,
don't be suprised if the FCC doesn't agree with your proposal.

Very effective rebuttal. So, you do have some type of supporting documentation that the group advocates the use of 10 codes, don't you? Otherwise, I would have to think that you are avoiding the central issue and that makes your position look very weak.

If CW is indeed effective and current, then it will propagate due to its usefulness without regulatory requirement. Judging by how shrill the proponents are, it appears that even they are afraid that it won't show itself to be advantageous enough for people to learn on their own.

On a related question, is it pro coders intention to boycott QSO's with countries that have already dropped the code requirement for HF work? Do you guys refuse to talk to Australians now?

Judging from the effectiveness of your rebuttals and the logic of your
arguments, code is doomed if you are a poster child for the movement.

Well, no kidding. I thought Kim's part in all this was pretty obvious to anyone with even a partial clue (which seems to rule you out). Instead, I was talking to Larry about his part in this - the years he's spent trying to sexualize Kim's callsign. Few others have made such an issue out of Kim's callsign. And that has drawn more attention to that callsign than perhaps anything else, even Kim's use of it.

We had one significant advantage in that area - we lived overseas for many years without much English-language television available. Because of that, we've never developed much of an addiction to television. We have two in the apartment right now (not ours - they came with the place). Neither of those have been on for more than an hour today, and most of that time was the weather channel (a show about a hurricane hitting Texas years ago) while I was putting a new chair together. Right now, the place is blissfully quiet.

Dick, did you get out of bed on the wrong side of life this week? If not, what is up with all the negative waste you're posting? If you don't like what I have to say, don't read it. It's ridiculous to sit there complaining about what I say while you obviously continue to read every word of it.

The important question is "how many active US hams" are members. Comparing the total number in one group with the number of active US hams in another is slanted.

>
> Explain how saying There are 5000 members of NCI is violating
> anyones privacy.

Good question! And we're still waiting for an answer.

We're not asking for names or calls, just the number of US licensed hams who are members. Anyone can determine the FISTS numbers. Why is NCI so secretive about theirs - particularly if the numbers don't really matter?

I recall reading here a statement by Carl that those in the minority should learn to take 'no' for an answer and get on with life. (Those are HIS words, not mine).

What if it turned out (as it did in 1998-99) that the NCI position is a minority opinion?

If you have an optimized receiver and suitable conditions, maybe - depends on
what you determine to be "equivalent data rates".

But hams don't do slow-HF-BFSK. 60 wpm FSK Baudot RTTY is about the most basic
data mode still in use by hams.
>
>More modern digital techniques are even better. Some produce perfect

That all depends on the equipment in use. Using a receiver optimized for one
mode in an attempt to receive another may or may not be a good idea.
>
What mode do you use most on HF, Carl?

Then why do have so many rules, regulations and laws protecting historic and natural sites?

Why do we use "English" measurement units instead of metric?

Why are QWERTY keyboards still the standard even though Dvorak has been shown to be superior?

What is and is not " a legitimate regulatory purpose or role" is purely a matter of opinion.

Then it's not Morse Code.

There is standard spacing and
> Farnsworth spacing and the variety of spacing that you hear on the air.
> There are some really fine operators who have near perfect standard spacing
> but the rest of us vary. That doesn't mean we aren't sending Morse.

It means that we are desparately trying to, except in the case of
DICK/W0EX who purposely sends poor code in order to thwart the
computer code readers.

He should be cited.

If you
> read the manuals on Morse, they give recommended element, character, and
> word spacings for standard operation but that is all.

Recommended?

It does not mandate
> that the relative spacing meet any particular standard to be considered

> Morse code.

So you say that Morse cannot be defined, yet the FCC demands you pass
an exam that has barred people from the medium and high frequencies.
It is whatever you want it to be.

hihi

That doesn't sound like good government to me.

Dick, I'm the someone who "said" and you constantly claim I know nothing of Morse.

Farnswoth is the preferred method for learning 20wpm Morse Code.

After you and Bill Sohl finished your "ex parte" what else? I'm sure you baffled them with BS just as you try to do here.

The simple fact is that YOUR ENTIRE ARGUEMENT is based solely on technology and nothing else! NOWHERE does it E EAR happen that ham radio
is or is ever likely to need to rely on maximum throughput. The ARS is simply not geared up for that sort of operation and will never be. It's not what hams do -
even YOU, -the promoter extraordinaire of technology- uses WHAT mode on the air? SINGLE SIDEBAND voice! Not a digit in your operation!

"OH, I'm going to get around to building _____ one of these days" wonb't cut it! Either walk the walk or stuff all the talk! Meanwhile hams are using Morse on HF at ever increasing rates, as is clear to anyone interested enough to tune in the lower end of any HF band. And you pass all that right by.

>
> ---
> ----

> on 14.347 MHz using voice modes.)

Nice selective reading list. Not at all comprehensive. And says nothing about any future situation. Of course you presumeto know exactly what anyone will need, where and when, then. Right.

>
>
> > One NEVER knows in advance what will be needed to deal with any unforseen

> one does not have to rely on outdated methods ...
>

Yeah the entire world of ham radio is going to gear up for disaster communications, keep it all ready all the time. Never happen and ANYONE should know it. You use what you find available in whatever circumstances you happen to be caught in when the ship hits the sand. Maybe you'll have access to all that "spare gear" and maybe not. If not, well gee, coulda shouloda woulda, but.......

Plans? You STILL don't know about plans and what happens to the "best laid" of them? HA! It's one thing to be ready to relieve a disaster, quite another to be caught inside one with a desperate need to communicate to the outside.

You're a simple one-demensional CW hater Carl,.. and you clearly will never get over it.. That old Morris code dragon will dog you for the rest of your life.

I was asking about you guys, not what they will do. Afterall, I've
boycotted General and above for about 9 years now because of
antiquated requirements.

The passing of regulations outside the scope of the organization. Is
it your contention that the FCC is chartered to be an organization
that was formed to perserve our historic traditions? A cite from the
Communications Act would be nice if that's your postion.

See Brian? You hang out on here with those of us who DO know long enough, and you're bound to
learn some little something.

How will you know? You plan on hanging out on the CW bands-with a computer to do your copying- and spying
on CW ops just to see who they aren't talking to?

How very typical a codehater you are! What makes you even suspect that CW operators would hold those CW
operators in another country responsible for irresponsible acts of their government? Logical progression
would have you insisting that we US CW ops will be boycotting each other if and when FCC drops testing!

And you have no idea how stupid you really are!

Get back inside your village!!!

Dick didn't miss a thing, Genius. How could Larry have "sexualized" what she had already sexualized long before? Why do you think she chose the callsign in the first place? That is, in the unlikely event that you ever actually think at all, before opening mouth.

Why would you want to foil computer copy? For you to do the test to make sure that it works and then advocate it's use, you can't really say that wasn't your intention.

Actually, the last time I subscribed to the ng, TIT's had left the
group and vowed never to return. Things changed I guess.

> keep things stuck in the past) is NOT a legitimate regulatory purpose or role.

It isn't propping, it's part of the package. It's no tradition to me,
I'm just a nickle Extra, licensed since 1999. Its the same as learning
math basics and using calculators at the same time. its a basic and

simple method of communication that I BELIEVE is a very good thing to know. You do NOT believe this. You believe that Morse code is an anachronism, and has no place in the education required to be a ham.

I think you may also confuse belief with fact. You'll probably disagree with that also.

No, they won't. You are mistaken. Math error!

Both Novices and most (but not all!) code-tested Techs have 5 wpm
credit for life. Check Part 97.

> Interesting fact ... I'll have to remember that for my comments. Thanks.
>
You might want to get your facts right before embarrassing yourself,
Carl.

All Tech Pluses, as well as an unknown number of Techs, already have credit for all of the code testing now required. The 257,830 Technicians on the books consist of the following:

- Techs who don't have the credit (never passed the test)
- Techs who don't have the credit (passed the test but let the CSCE expire)
- Techs who have the credit (Tech Pluses who did a post-restructure renewal)
- Techs who have the credit (valid CSCE)
- Techs who have the credit (Novices who did a post-restructure upgrade)

Of these, only the first two groups will "benefit". The rest won't. How many are in each group? You tell us. But remember that for more than three years all Tech Pluses have been renewed as Techs.

You might want to check your math, too. Even if all 257,830 Techs are counted as not having code test credit, 257,830/685,759 is 37.5977....%, not the 54+% you posted.

If we take the number of the first two groups as 210,000, (which is reasonable considering new license issues, renewal and upgrade rates), the percentage drops to less than 31%.

BIG differences from 54%.

You still want to tell FCC that 54.8158101% of US hams will immediately benefit from dropping the Morse test? Be my guest.

Now if the number of US hams who are active NCI members is (let's be generous) 4,000, that's 0.583....%

It's the number that they put forth on their petition. If you can prove
they are not being accurate, that would shut them down pretty well......

And the supreme court yesterday must hav thought that the FCC's
decision process was a tad flawed.

I can't? Who are you to say even what the subject was? The allegation had been made that a computer does a perfectly
acceptable job of copying Morse code which is of course very inaccurate. My remark was one of many possible reasons
for that fact.

Stuff it, Brock. You'r as ignorant as Brian.

Yes, but the version is vintage 1990 and the library branch is way
across town. Would the ARRL 1990 extra class license manual be good
enough in these areas in your opinion? I don't need the exact answers by
exam number, just the appropriate formula.

Dick you have hit the proverbial nail on it's proverbial head! This sentence should be required reading, and should be tatooed on everyone's eyelids.

Predictions of where disaster will strike are not too accurate. Otherwise we could move people out of the area, and there wouldn't be a problem. Certain areas are more prone to certain types of disasters, but overall, where and when it happens is a random thing.

Will these wonderful methods be available to whatever operator happens to be *in* the area? All the old system did was to ensure the likelyhood of someone on the inside, and someone on the outside are able to talk to each other.

It doesn't say they have to use Morse. What it did ensure was that under some pretty poor conditions, there would be a comms.

> Maybe you'll have access to all that "spare gear" and maybe not. If not, well gee,
> coulda shouloda woulda, but.......

Now this is an interesting thing! Are we to *have* to buy this equipment? And what of the poor ham that didn't have the resources and is caught in the middle of a disaster?

> Plans? You STILL don't know about plans and what happens to the "best laid" of them? HA!
> It's one thing to be ready to relieve a disaster, quite another to be caught inside one
> with a desperate need to communicate to the outside.

They'll use cell phones and Echolink..... you know, modern technology.

Your loss, dude.

If you wait long enough, the writtens might go away too.

Hey Carl, here's one of your new guys!

The Supremes told the F.C.C. that it's relaxed ruling on how many media outlets one entity (Clear Channel and Fox types) could own was not acceptable.

And as a person that lives in an area where all the AM stations are playing the exact same thing most of the time, I can say it's a bad idea.

And with Fox News bloodying it's nose trying to sue and squelch a satire writer, I am leery of them now too.

Some ARES groups have incorporated as not for profits. This allows them to get corporate sponsorship for emergency gear.

A contractor for a local nuke plant hired to make sure the evac drills go smooth told me last year there was no need for amateur radio. They could depend on cell phones for all their field communications during evacuation of the NYC metro area.

No Shit !

So by your logic I should have, as a VE, boycotted administering no-code Tech tests? You sure demonstrate
where you're coming from.
Welcome to the house of code haters, you fit right in.

Steve, key words are "Hudson Division." That is an American Radio
Relay League (ARRL) geopolitical region.

So what you received was a political advertisement for an amateur
radio operator, Frank Fallon/n2FF, who wishes to be reelected to his
post as Director, Hudson Division.

When possible, it is a good idea for groups to have equipment at the ready. Mother Nature has this nasty streak in her that seems to favor the unprepared though! ;^)

Can you imagine? And yet I hear that kind of thing all over. Presumably intelligent people that don't realize that these highly centralized systems are certain to fail when the same conditions that make emergency comms necessary work their damage on those area systems.

The inherently independent, non networked nature of Amateur radio is what gives it it's strength. And sometimes why when all else fails.... corny statement that just happens to be true.

Sorry, DICK. You said much more than that, and your stated goals in amateur radio are quite defective.

Wow, Steve.

An anonymous poster posts something you agree with and you act like
best friends. Another anonymous poster posts something you don't
agree with and you go psycho.

Why is that?

DICK cranium, Vipul asked Steve if he had been personally involved in
emergency comms, and Steve replied with a list of disasters, including
the terrorist attacks on September 11th.

You stand corrected.

>couldn't resist!

No problem. All you have to do is make sure you've pulled safely
off the motorway, put out your triangle, then collect the spare,
jack, and lever (pronounced "leever") from the car boot. Hopefully
your wheel nuts won't be corroded. Then, after replacing the flat
tyre with the spare, hopefully you won't be too knackered to
continue with your journey!

Kim:

Let's count the number of times you call Dan some kind of name in the
following response.

>And I am sitting here so wowed with your intellect, Dan, that Bo Pilgrim is
>second on my list of mentors now.

There's Number One.

>You are filthy, wretched and disgusting.

Two, Three, and Four.

>I have never (even in Larry Roll)
>seen the equivalent to the blabbering garbage that you put forth hear in
>this newsgroup and it's as simple as that.

Five.

>You're as predictable as Len
>Anderson,

Six. (Comparing anyone to anyone else, especially comparing them to Lennie, is definitely "name calling."

>and that makes you pretty damned boring.

Seven.

>You spew forth with
>comments that prove to me that your lacking in social skills and never cared
>about making up for it.

I'll count that as a double; Eight and Nine.

>You have nothing but contempt for fellow human beings

10.

>and it's because you seriously lack any form of humanity

11.

>You bring about your own sorry ass way of
>life

12. That's enough, an even dozen. We'll stop here.

Now, for the real irony:

>Then, you run into a woman of high intellect

Whom would that be, Kim?

>and your stooped so low for
>desperation to be able to one upmanship her that you swing into extremely
>low gear with nothing but name calling.

And, naturally, you prove your point by indulging in a dozen "name callings" yourself.

>Proving the points I have just observed about you.

Actually, No, Kim, you just proved those exact same points about yourself.

>You are as worthless as dust in a waterless environment.

Gold dust, compared to you, Kim.

>No one here, in my opinion holds a candle to how wretchedly
>low you really are.

Except for the person staring back at you in your bathroom mirror.
POT + KETTLE = BLACK. The only logic you know.

Kim, you are totally out of your depth here. You debase and humiliate yourself with each and every posting you make. I don't know why you have this impulse to continue to prove your abject lack of intellectual maturity, but keep it up. You provide plenty of amusement.

Exactly. And, I hadn't heard of any attempt to boycott a "country" due to its position on CW. That seems like something that would only get thought up right here in this newsgroup, though! <GRIN>

Anyway, that's taking the whole CW debate just way too far, IMNSHO.

You really can't get *anything* correct can you? I turned in nothing! I closed down my VE teram in early '94
after we licensed so many other hams who started up their own teans in the region that we had very little
business remaining. At the outset we had the only team in a hundred mile radius. I *did* remark after the last
restructuring that I didn't ntend to participate as a VE after that debacle. So far I haven't, and haven't
needed to.
Get your facts straignt and MAYBE you won't be so prone to spread falsehoods.

What if it was? Nothing you can do about it but learn the code.

I can't understand why you would want to talk to someone from another
country who had possibly not passed your lid filter, but to each their
own incongruiteis I guess.

Show me where I said that anyone proposed it and I'll consider
documenting it. I'm not in the habit of trying to document things
that I never said and I won't start with you.

No, the writen exams have a basis in the real world. Code just has
it's basis as a historical antiquity. I'm more than willing to do
whatever is necessary to prove profiency in radio operation.

So you wanted to elicit an emotional response in Radioman? One done in a positive vein, as is typical of "striking a chord" with someone, instead of an irritating emotional response as in "striking a nerve", is it? Oddly enough, most of your posts don't seem calculated to elicit a positive response.

Pity a smart fella like you has to argue with a dullard such as myself. Better get back to the Mensa folk, who *might* be qualified to talk wit' ya if they acts nice 'n don't get too uppity.

I didn't say that I boycotted any ham. I said that I boycotted a
licensing structure that I disagreed with. I'll QSO with any ham on
any band that we are both licensed to operate on. I even learned
code, but I won't upgrade until the requirement that I disagree with
is removed.

I simply asked if anyone would consider boycotting no code HF
operators from other countries. Oz is already issuing licenses.
Asking a question is not proposing anything. However, making that
jump in logic is typical of usenet in general.

Without posting a list, he could clam any number that felt good to him. So, the number would mean nothing withou supporting documentation. What's sad is that you know that and want to harp on a number anyway.

No doubt. Dumb is written all over your post.

> Your NCI organization is nothing but a bunch of whinney crybaby lazy me
> generation morons.

Odd. I think the PCTA are the whiney crybaby generation who think if
it was good enough for their grandpappies, that its good enough for
everyone since.

"I had to learn it, whah, whah, whah."

I'm not buying it.

All we've asked you to come up with was a valid reason to retain the
code exam.

That should be simple enough, right?

> You know it, and we know it. Now just go off and whine

I already know that code. My interest in using it, or listening to
is, is non-existant. However, if you tried really hard, you could
probably send it bad enough that I couldn't copy. You would have to
try wouldn't you?

Imagine it's like exercising or setting a goal to enter a marathon.

You don't do 500 push-ups, 100 arm curls, and run 26 miles a day. You
work up to that goal of running and finishing the 26 mile Boston
Marathon, a little at a time, 3 days a week.

It can be done. Takes practice, a lot of practice and patience.

My suggestion is, limit yourself to 3 times a day (if you can fit into
your schedule), every day. That will keep from being overwhelmed and
feeling of frustration at least to a minimum.

It took me a little over 6 months to go from nothing to 20 WPM. I
passed the 20 WPM code before I took the General written exam.

Yet the FCC demands that one passes an exam or be denied access.

Shouldn't they have a definition of what is being examined?

What are you ranting about?

There's a whole spectrum of modes between CW and PSK31 that don't
require computers.

And besides, the power distribution system isn't using amateur radio
anyhow.

Sheesh!

Know what you mean. I drove 100 miles in a blinding snowstorm to get
to the nearest VE session to take my Advanaced and Extra theory
elements.

My father upgraded from conditional to Extra while in college. The
FCC Field Office, was down the street from the college. To do that
today, that's 12 hours round trip.

"Recommendations" can be mandatory, if they are "incorporated
by reference" in the ITU Radio Regulations ... use of "shall" which
means "must" as opposed to "should" which means "is strongly
encouraged, but not strictly mandatory" or "may" which means
"if you feel like it" (more or less).

Don't try to lecture me on regulatory ... that's what I do for a
living (and for a couple of major industry organizations, plus
NCI)

Bits is bits ... same equivlent data rate is pretty clear.

basic
> data mode still in use by hams.

No, because it works well at higher rates and higher rates are desirable.
BUT, if they *did* slow WAY down to Morse rates, they'd have at
least a 9 dB weak signal advantage over OOK Morse..

I'm playing with the soundcard modes right now ... PSKxx in particular,
helping some friends check out some pretty slick freeware they're
developing.

Come winter after the antenna work is done, I intend to work on designing
some high speed stuff.

In other words, since they provide the question pool, you don't think that people have to learn the answers in order to correctly answer the questions? How do you think that they figure out how to fill in the correct answer then?

You weren't provided with an answer sheet where you only had to memorize the correct sequence were you?

I used to train people at a nuclear power plant. The way I did it was to provide the students with a list of objectives, which were usually in the form of questions. I told them up front that when I was finished with the class, I expected to have covered those objectives and that they needed to know the answers. When I wrote the test, you know where the questions came from? Yup, they came from those objectives word for word because that was what I wanted them to learn. So, if they would study those objectives and know the answers to those objectives, they could pass the tests with no problems. We didn't play games with them and train them on objectives and test them on something unrelated. We taught them, they learned what we wanted them to learn and we validated that they had learned it without playing mind games with them by extending the tests beyond the objectives.

That worked very well in a nuclear environment. We maintained a SALP 1 from the NRC during the time frame I was there and I was there for quite a while. Perhaps it's you contention that getting a license to operate a radio is somehow more complex than the nuclear environment, but that's simply not true and anyone who is rational would know that. In both cases, the material is taught and the student learns it or they don't pass the test.

>Bullshit, Prove it.

See, I told you guys that this would happen if any number was claimed. Now, someone wants proof and the only way to proove it is to publish a list of members which NCI won't do. It was like watching two trains going opposite directions on the same track, you guys knew it was going to happen, yet you did everything possible to make it happen.

The question then becomes, why? One possibility is that you thought that a number could be published and no one would say, "Proove it." We all know better than that though. Another possiblity was that it's what you wanted to happen, because when it did happen you could all jump on the "the number is BS bandwagon". The advantage of the "BS bandwagon" is that it moves you away from just how untenable the code requriement position really is and it makes you feel somehow stronger.

I'm sure that there are other reasons that you guys were so adamant about wanting a number that you knew you would disagree with. I'd like to hear them. What are they?

Yep. Another one of "them". He proposed it but he didn't propose it.

What's "psycho" about it, Brain, or are you simply working off of
the same correspondence school degree that Lennie does?

> Why is that?

Perhaps because the other poster didn't make a lot of assinine
assertions that are not substantiated by facts, Brain.

You may refer to "fact" in Websters to find out what they are,
Brain...You DO seem to have a problem with the concept.

> improvements.

I'll watch while you >>TRY<< to show us where the ARRL has been
"pushing for lower standards as improvements", Vince.

Or shall I heap that expectation on the same pile of unanswered
questions along with all of Lennie's...?!?!

There's the Special Services Clubs, numerous scholarships for
youth and educational programs.

The recent Emergency Services programs that are not only being
funded but RE-approved for even further funding in the Homeland
Defense role bear even further evidence of the support that ARRL has
provided Amateur Radio.

So...Thee's three right off the top of my head. I don't see any
other Amateur "organization" that is promoting these programs as
aggressively as the ARRL.

Speaking of no life. Dick is a big-time emergency communicator. Used
to drill 7/8" holes in the rooftops of Missouri's finest. Lives for
the New Madrid earthquake.

But when Hans invited him to join in a QSO using his favorite mode
that he demands everyone else be made to learn, his lame excuse for
not doing so was that he wasn't home at the time. Apparently he can't
go mobile himself.

So much for his emergency skills.

The point is that the level of UNDERSTANDING required to pass the writtens
today is a lot less than it would be if the actual Q&A were not made public.
>

OK, fine.

Did they KNOW, from Day 1, that the test they would be taking would consist of
the exact questions and answers you gave them on Day 1?

Was the passing grade 74%?

Was there a penalty for wrong answers?

>We didn't
>play games with them and train them on objectives and test them on

>something unrelated. We taught them, they learned what we wanted them
>to learn and we validated that they had learned it without playing
>mind games with them by extending the tests beyond the objectives.

Nobody's saying the tests should go beyond the stated objectives.
>
>That worked very well in a nuclear environment.

I imagine that the class has a lot of motivation towards safety.

>We maintained a SALP
>1 from the NRC during the time frame I was there and I was there for
>quite a while.

Were the employees tested once at the beginning of their employment at the plant, and never again? Or was continuing education an integral part of that environment?

>Perhaps it's you contention that getting a license to
>operate a radio is somehow more complex than the nuclear environment,
>but that's simply not true and anyone who is rational would know that.

Not a question of complexity.

>In both cases, the material is taught and the student learns it or
>they don't pass the test.

Not all hams take formal classes - in fact, most probably don't.

In the bad old days, the FCC published a study guide that listed, in essay form, the type of questions and typical solutions that would be found on the tests. For example, there were questions about Ohm's Law for a DC circuit and how to solve them. Any prospective ham knew he/she would be expected to know how to solve E = I/R and P = IE problems, resistors in series, parallel and series-parallel, etc. And anybody who had a basic UNDERSTANDING of that stuff would have no problem on those test questions.

But the actual Q&A were not made public. Today, with the actual Q&A in hand, less understanding is required.

That's what bothers some folks.

Consider this: Today, the test for Tech is 35 questions from a published pool. Most of those questions are on regulations, with some operating practices, theory and safety stuff. Yet the license granted for passing that test gives alla amateur privileges above 30 MHz, including the authorization to design, build, repair, align, modify and most of all operate transmitters of up to 1500 W power output on 'meat cooking frequencies' as WK3C puts it. There is no separate safety testing nor ongoing education - someone can get all of the RF exposure questions wrong and still pass.

Do you think that the test and its methods are really adequate for the privileges granted?

FCC does. In fact, back in 2000 they lowered the written requirement for the Tech license by almost half.

Exactly - but to finish a marathon takes more than 3x a week practice. Your
basic point is valid, though - marathoners don't start out running anything
like the marathon distance or pace. They work up to it over time.
>
>It can be done. Takes practice, a lot of practice and patience.

I'd say the most important training rule (for both Morse and marathoning) is to
have a consistent schedule that is challenging but not frustrating. And to
realize that not every workout is going to be easy or better than the last one.

Well, excuse the observation here: but you asked and was answered, at least by N2EY and by me. Both answers were succinct and without merit for the return you have above--which seems quite defensive and I'm puzzled by why.

So, you simply asked and were quite simply answered.

And, since you were the one who asked the question of such a weird concept you would be observing your own actions with regard to your last sentance.

Whether someone can remember correct answers to known questions.

heh heh...yeah, I know. There's been one reason or another for not having the equipment connected. Right now, it's been for the last (nearly) two years because of the new truck, having to find where I want the equipment; then having to pause all that while I have some work done, etc.

Never have really talked from the house, except to run a training net, so that's pretty much out of the question. In fact, both of us still wonder why we put up a 70' tower, loaded it up with antennas and don't even have a radio connected in here now. We used to have the HF rig set up and used to use it every night; but haven't done that in nearly four years...maybe longer.

No number has been claimed, Bob.

> Now, someone wants proof and the only way to proove it is to publish a

> requriement position really is and it makes you feel somehow stronger.

Nope. None of the above.

Here's the background:

NCI has been around since about 1996. Some of its staff and supporters
have claimed that the procodetest position is a minority position -
which makes them the majority position. But no proof of same has ever
been offered. There have also been claims that NCI "represents" ham
radio, and that ARRL does not, etc.

Check out this post from the executive director:

http://groups.google.com/groups?selm=keV_9.2605%24N5.1476932%40nnrp1.ptd.net&oe=UTF-8&output=gplain

Here's the part I like best:

(Carl, WK3C, writes in an earlier post):
> >And
> >are you going to grouse about "restructuring" for the next 50 years?

(I replied):

> Not me. But isn't it the right of all Americans to complain about their
> government and petition for changes?

(Carl answers):

Yes ... of course ...

> Or is that right reserved only for those who agree with NCI's opinions?

Of course not, but at *some* point, folks in the minority should take "No." for an answer and get on with life ...

(end of quotes)

Gotta love that addytood..."at *some* point, folks in the minority should take "No." for an answer and get on with life ..."

Did NCI "take no for an answer and get on with life" when they turned out to be in the minority of those who commented to FCC on the 2000 restructuring?

Suppose the FCC puts up an NPRM proposing to dump Element 1. And suppose the majority of comments received on the issue say "Keep it". Will NCI "take no for an answer and get on with life"?

Naturally some of us asked how big NCI is, and how fast it was growing, and all we ever got was evasive answers such as "lots and lots", "growing by leaps and bounds", etc.

The only indication those of us on the outside have of NCI's size is the member numbers we've seen. The highest numbers I've seen are below 5000, which means there cannot be more than 5000 members, right?

But there's more! NCI started out with member number #1001, not #0001, so the real size cannot be more than 4000. Why did they start with #1001 instead of #0001? Please don't tell me their computers could not handle low numbers...

On top of that, membership costs nothing and all members are considered "active" unless they specifically request being removed from membership. Which has happened in a few cases that I know of personally. So anyone who joined is carried on NCI's books as a member, no matter what their interest and activity today. FISTS and most other groups like ARRL will drop you from their rolls if you don't send in your renewal, but not NCI.

Despite repeated requests over at least 6 years, NCI refuses to give an actual number of members. Why? All we've asked for is a statement like "As of September 1, 2003, there were XXXX active members of NCI. Of those, YYYY are licensed US hams". We did not ask for a list of names or calls.

All of this makes an NCI-outsider a bit skeptical. If the number of members isn't that big a deal, why all the secrecy about it all these years?

> I'm sure that there are other reasons that you guys were so adamant
> about wanting a number that you knew you would disagree with.

You're taking Bruce's demand for proof and applying it generally. Why?

> I'd
> like to hear them. What are they?

See above.

I'm the one who told you that when you were asking for a number. He
told you in advance that he wouldn't publish a member list. Did that
slow you down? No...it didn't. You are your own worst enemy.

> Karl and the nuts are going before the FCC claiming they have X number of

Regulatory agencies are not democracies. They will listen to everyone
and then do as they please. You may not like it, but that's how it
is. I would say that, given some of the larger members of the EU
already dropping the code requrement, the the pro coders have an
uphill battle if they want to make us look like a backwards country
where ham radio is concerned.

No I don't. In addition to dropping the code requirement, I would
like to see the academic testing made much harder with a performance
based test included. However, that's not going to happen.
>
>FCC does. In fact, back in 2000 they lowered the written requirement for the
>Tech license by almost half.

See my above comment regarding regulatory agencies. I can see where
they are coming from though. They have limited budget and ham radio
is a very small part of their plate.

You're so binary. Take a few courses in logic and decision making.
It would help you immensely.

OK Kim, show me where I said that I would boycott someone because of
their code status and I'll get back with you. If you can't quote me
saying that, who made the jump in logic will be apparent.

The ball is in your court.

Lessee, Bob. You qoute me as saying:

>> Provide references where anyone has even proposed such an activity.

And next you ask me:

> Show me where I said that anyone proposed it and I'll consider
> documenting it. I'm not in the habit of trying to document things
> that I never said and I won't start with you.

I wanted to get those two sentences right beside each other so you
could see that I never said you said such a thing.

We play rough in here, but we do expect people to make sense.

Whattya think Dick? This person comes in here, asks incredible slippery slope/leading questions but won't answer them, thinks that "reasonable approximations" are numbers, and then brags about not upgrading because:

From Bob Brock>> Afterall, I've
From Bob Brock>> boycotted General and above for about 9 years now
From Bob Brock>> because of antiquated requirements.

This sounds like one of the principled people that Carl speaks of who won't go beyond technician because they don't believe in the Morse test. Is this typical of Carl's new people?

If no value was given, why are you guys asking for proof of something
that wasn't said? I do understand though. I asked a question and
that was turned into a postion that needed justifying, so I realize
that there are some serious reading comprehension problems here

I sure hope that some of the people who have replied to me can send
Morse a lot better than they can read english.

> a suitable option because they (dread the thought) require a computer

Modes which require a computer to run 'em cut both ways. Having to use
a computer to run the stuff represents a huge increase in station
complexity and the inevitable corresponding decrease in station
reliability. Additionally cost, weight, space, power consumption,
required technical skills and a bunch of other factors also mitigate
against the use of computer-based modes.

Given the mythical average ham who could care less about weak-signal
performances and/or throughput rates. Very few of which show up around
here, least of all in this discussion. So in this sense Dick is right.

For the second time. I don't provide references to claims that I never made. You can put it any way that you want it, but until you show me where I made such a claim, I have no need to document its accuracy.

If you're going to "play rough in here," you really need to learn to read a little better and stop asking me to support positions that I never took.

Try again...K?

I've answered your question twice Mike. Just because you don't like
the answer doesn't mean that it wasn't answered. Tell me, if you can
get enough of your buddies to say that I said something that I didn't
say and ask me to support a postion that I never took, does that mean
that I really did what I didn't do?

Regulatory agencies are really unimpressed with that kind of BS I
hope you guys deal with them much better than you do with people here,
because the first time that you tell them that they said what they
didn't say, it's an ugly sight.

No wonder the code requirement was doomed.

If your regular rules of logic include making up a postion and then
asking someone who didn't support it to justify it, I'd have to agree
with you. All you have to do is show me where I said it. What's the
problem Mike. You're dancing all around it, but you just can't seem
to do.

Why is that?

Actually I saw a lot of that when the no-code techs first came on the scene, so precedent is there. Also, this is a usenet group, not direct testimony in a court of law. Believe it or not, I can ask any kind of a question that I want to. However, if you are going to chase me on a postion, you really need to be able to find a postional statement. I've asked for it. You haven't quoted it.

Why is that?

SPELLING...in every usenet conversation, it's the last dying gasps of
a lost cause.

It goes kind of like..."I can't say anything intelligent, but you
mispelled a word so I have to be right." Posts get the attention that
they deserve.

In your case, it's pretty close to nun.

There, you feel more "right" now?

> So much for his emergency skills.

And it's true, I WASN'T at home-that time. But where were YOU when K0HB, N2EY, W6RCA,
AC6XG, W3RV and
I--Did I forget anyone?- held that nice rrap CW net on 40 meters???

Oh, I almost forgot- you're STILL waiting for a code free license! Right!

As for emergency gear, I have all that in a pair of metal equipment cases, ready to grab
and go, if and
when needed. I'll take along a laptop just in case the need happens to be for a digital
mode. AND my
Vibroplex Iambic paddle for CW.
For power I have a lightweight switchmode AC supply AND an 800 watt inverter. One does need
to be
flexible doesn't one? After all, the need could be for something hightech and digital. But

the
possibility always exists that those needing to communicat from a disaster area will have only modest old
CW available.

One does need to be ready, doesn't one?

So what's YOUR enmergency status,Slim? Do you have "permission" yet?

Dick, W0EX FISTS #3939

Since you can't state, much less support a logical postion, it's
probably best for you if you don't. If you try closing your eyes,
sticking your fingers in your ears, and yelling perhaps it will work
better.

I'll tell you guys why I'm here shortly, but conversing with twits
like you sure isn't it.

What inaccuracy? Carl has not claimed any number. Given his recent
math mistake in "ARS License Numbers", I'm a bit skeptical about
reasonable approximations and leaps and bounds.

Here's the rest of that post. Perhaps you can find some more
inaccuracies.

(repost begins here):

> Now, someone wants proof and the only way to proove it is to publish a
> list of members which NCI won't do.

Then that one person doesn't get his proof.

> It was like watching two trains
> going opposite directions on the same track, you guys knew it was
> going to happen, yet you did everything possible to make it happen.

What ARE you talking about? Ever hear of railroad signal systems?
>

> jump on the "the number is BS bandwagon". The advantage of the "BS
> bandwagon" is that it moves you away from just how untenable the code
> requriement position really is and it makes you feel somehow stronger.

Nope. None of the above.

Here's the background:

NCI has been around since about 1996. Some of its staff and supporters
have claimed that the procodetest position is a minority position -
which makes them the majority position. But no proof of same has ever
been offered. There have also been claims that NCI "represents" ham
radio, and that ARRL does not, etc.

Check out this post from the executive director:

http://groups.google.com/groups?selm=keV_9.2605%24N5.1476932%40nnrp1.ptd.net&oe=UTF-8&outp
ut=gplain

Here's the part I like best:

(Carl, WK3C, writes in an earlier post):
> >And
> >are you going to grouse about "restructuring" for the next 50 years?

(I replied):

> Not me. But isn't it the right of all Americans to complain about their
> government and petition for changes?

(Carl answers):

Yes ... of course ...

> Or is that right reserved only for those who agree with NCI's opinions?

Of course not, but at *some* point, folks in the minority should take
"No." for an answer and get on with life ...

(end of quotes)

Gotta love that addytood..."at *some* point, folks in the minority should take "No." for an answer and get on with life ..."

Did NCI "take no for an answer and get on with life" when they turned out to be in the minority of those who commented to FCC on the 2000 restructuring?

Suppose the FCC puts up an NPRM proposing to dump Element 1. And suppose the majority of comments received on the issue say "Keep it". Will NCI "take no for an answer and get on with life"?

Naturally some of us asked how big NCI is, and how fast it was growing, and all we ever got was evasive answers such as "lots and lots", "growing by leaps and bounds", etc.

The only indication those of us on the outside have of NCI's size is the member numbers we've seen. The highest numbers I've seen are below 5000, which means there cannot be more than 5000 members, right?

But there's more! NCI started out with member number #1001, not #0001, so the real size cannot be more than 4000. Why did they start with #1001 instead of #0001? Please don't tell me their computers could not handle low numbers...

On top of that, membership costs nothing and all members are considered "active" unless they specifically request being removed from membership. Which has happened in a few cases that I know of personally. So anyone who joined is carried on NCI's books as a member, no matter what their interest and activity today. FISTS and most other groups like ARRL will drop you from their rolls if you don't send in your renewal, but not NCI.

Despite repeated requests over at least 6 years, NCI refuses to give an actual number of members. Why? All we've asked for is a statement like "As of September 1, 2003, there were XXXX active members of NCI. Of those, YYYY are licensed US hams". We did not ask for a list of names or calls.

All of this makes an NCI-outsider a bit skeptical. If the number of members isn't that big a deal, why all the secrecy about it all these years?
>

You're taking Bruce's demand for proof and applying it generally. Why?

I know a ham who did that - put up the tower and antennas when they first moved in and left all of the coax ends coiled in a bucket outside the house. hen they set about doing various move-in projects and did not unpack the rigs right away, nor run the coaxes into the house.

Sure enough, one of the neighbors with Gladys Kravitz syndrome complained about "interference" and such that supposedly happened since the antennas went up. Called FCC as I recall. Ham invited over the neighbor and other interestested parties and showed 'em the coax ends. No more complaints.

There ya go. Not the same system at all. Passing the written tests was
only the first step. In amateur radio without code tests, it would be
the only step.

> >Was there a penalty for wrong answers?
>
> The lost points on the exam...we didn't beat them or anything like
> that. ;-)

Sorry - "test score penalty". Like in the SATs, where, on 5 choice
multiple guess questions, a right answer is 5 points, a wrong answer
is -1 point, and no answer is 0 points. Eliminates any benefit from
random guessing.

> >>We didn't

Probably not. It will never ever happen if hams don't ask for it,
though.

And you can count on this: Propose harder written tests and other
performance-based tests, and there will be opposition for exactly the
same reasons some people oppose the code tests.
> >

The FCC does not spend one cent on training hams. Nor do they spend
very much on testing and test generation - volunteer hams do almost
all of that. All FCC does in connection with license testing is
process completed applications after the VEs have done most of the
work, and approve questions generated by the QPC folks.

We could have all better written exams and different performance tests
without it costing FCC anything. But it goes against the fashion. And
the "Smith chart effect" opposition would kick in, guaranteed.

3079. Could This Be The Solution?

Newsgroup: rec.radio.amateur.policy
Date: 2003-09-05 19:54:37 UTC
From: N2EY@AOL.COM
Message-ID: <c2356669.0309051154.4ef03806@posting.google.com>
Source record: 76493

The following isn't exactly a new idea, but some may not have seen it yet...

Maybe the way out of the mess is for a Smith Chart test to replace the code test.

Understanding the Smith Chart and being able to use one actually demonstrates several areas of knowledge and skill. Smith Chart tests could consist of interpreting a solved problem on one chart, (the "understanding" test) then solving a different problem on a blank chart (the "solution" test). At first, most hams and wouldbe hams would would simply study the Smith Chart and pass the tests.

But then the trouble would start...

Some hams who had not passed the Smith Chart test might say that those who had passed the test were being "elitist" about their Smith chart skill and knowledge. The term "chartless Extra" would be considered an insult by some, a badge of honor by others.

Some would grumble that since they have no desire to design antenna/transmission line systems, they should not be required to pass a Smith Chart test. They would point out that other services do not have Smith chart testing, and so neither should hams.

Defenders of the tests ("Smithys" or "chartists") would claim that the Smith chart was a "uniquely practical, efficient, and universal" tool for antenna/transmission line work. They would claim to have been "smartened up" by the Chart test requirement. Stories would be recalled about how lives had been saved by hams able to quickly design matching sections to permit using an antenna on a frequency it was not designed for, and would predict dire consequences in the event of widespread disaster.

Those opposed to the test ("Smithless" or "nochartists") would argue that newer, more accurate, less error prone software systems had left the
Smith chart in the dust. "We don't want to use OLD design methods" and "The
Chart is too slow and error prone" would be their rallying cries. Other would
ask "do you have to show slide-rule proficiency before using a calculator?"

There would be testimonials by hams who had worked 300 DXCC countries using QRP and a dipole without any reference to a Smith Chart, and claims of others who "had rote-memorized the Chart and promptly forgot

it all as soon as the test was over". Some would tell stories of new Extras who held Chart-burying ceremonies at the base of their antenna systems (designed without Smith Charts, of course).

Many would claim that young people, used to solving even minor addition problems on computers, had no interest in learning old-fashioned "buggy whip" graphical methods. Some would say that the emphasis on such a timeworn, old fashioned, crude graphical method of solving problems made ham radio look backward and nonprogressive, and was downright embarrassing. Ph.D's in EE would claim that they had designed entire radio communication systems without use of the Smith Chart, yet were kept out of ham radio because of the test.

The arguments would become more heated and insulting over time. Nochartists would point out that the Chart test was discriminatory. For example, blind people could not fulfill the letter of the law in passing the test. Some would claim to be "chart impaired" and unable to pass the test due to inability to do geometry. The question of "chart waivers" would be raised, and much angry invective spewed over "chart fraud" and "open chart pools". There would be a demand that the use of graphical calculators be allowed in the tests.

Chartists would claim that accomodations such as Braille Smith charts met the intent of the law. Old timers ("quillpenners") would recall a time when all charting was done by hand, in ink, on chart paper costing the modern equivalent of several dollars a sheet. (They used ink because they were so confident of doing it right the first time).

The use, or nonuse, of the Chart by military and commercial services would be hotly debated. Some nochartists would claim that the military stopped using the Chart during WW2, while some chartists would claim that the Smith chart plays a crucial role in the modern military.

A popular summer blockbuster movie starring Jodie Foster, Will Smith, Jeff Goldblum and Bill Paxton would have a plot in which alien invaders were detected, then repelled by means of a hastily reactivated surplus Russian over-the-horizon "woodpecker" radar system. The critical plot element would be the heroine's use of the Smith Chart to match the "woodpecker" transmitter to the Arecibo dish. (How the Russian radar wound up in

Puerto Rico would be left unexplained).

The ARRL, Gordon West, and W5YI would be caught in the middle of the debate. From the first, they and others would have marketed a whole line
of Smith chart training aids, including books, videotapes, and software.
W1AW would transmit SSTV programs explaining chart use, and MFJ would market "portable personal chart trainers". Claims of monetary interest in the production of Chart materials would be made and denied. Poorly worded surveys would show a variety of opinions on the issue, but no consensus.

Nochartists would claim that the chartists were just "old f***s" who were supporting the status quo due to "chart chauvinism", and did not understand the realities of the modern age. A few chartists would claim
that the nochartists were just "whiners who were too lazy to even learn
how to hold a compass correctly". The need for "high speed chart tests"
would be debated hotly, many claiming that no time limit should be placed
on the chart test. "One Chart per week satisfies the law" would be their
claim, while skilled chartists would speak of doing 30, 40, even 50 charts per hour, and being able to "see the solution without even making
a mark on the chart".

Eventually the nochartists would organize a group to fight the chart test.

The founders of No Charts International would claim that they had no problem with anyone USING the Chart, just the mandatory test requirement.
"It's not the CHART, it's the TEST" would be a common rallying cry.

Well Bob,
I will always feel more right for several reasons, most of which are well beyond your ability to comprehend.

By the way, you did very well on your spelling.

Carl you should have instructed your minions to come up with their own
words, almost all the "pro" replies are the same cut-paste responces.
But after reading through some of the replies where people actually wrote
their own ideas, I can see why you just had the fille in the blanks.

By the way, I did not know that so many (as one person put it) Blectronic
engineers were so oppressed, poor little fellas. :-(

Stick with the tried and proven Jack and just get on with the job like tens if not hundreds of thousands of us have already done. There is no point to reinventing the wheel.

I've sed it before I'll say it again: The W1AW code practice sessions and getting on the air ASAP are the best methods out there for learning the code. The 1AW sessions are reliable, they're not repetitive and you can pace yourself without breaking a sweat depending on your own set of learning curve variables. Yes it's Farnsworth and 1AW Farnworth has obviously worked for decades. Now go copy 1AW 5wpm sessions until you "get it".

I'm not sure I'd advise getting on the air with 5wpm these days but getting on the air with 10wpm absolutely will accelerate your move up the code learning curve. There is nothing which can simulate the experience and stimulation one gets when snagging real CW QSOs early in the code learning process. Nothing. Sweat, sweat, tremble, into the deep end . . Been there, done it and it WORKS. The mix of 1AW and The Deep End worked twice for me and I not only enjoyed all of it but also got to 20wpm+ via logs full of actual QSOs to boot.

And CW contests are lousy code practice.

Dick,

Perhaps the problem is to get rid of Bill's operating system and go over to "Steve" what's his name? Hopefully, there won't be a problem with tin connectors, poor programming, intermittent connections ... whatever. I know, I don't worry about CW, but the whole thing is out of control anyways. Lemme get another can of beer out of the 'fridge. :)

> It is whatever you want it to be.

Morse code is very clearly defined. Each letter, number, etc has a defined combination of dots and dashes. There is no ambiguity whatsoever. For normal conversational speeds (13wpm to 20wpm), the standard spacing allows one to develop a natural, easy rhythm. For low speed operation (less than 13wpm), it is better to have the letter speed be at least 13 but spaces between the letters. It's actually much easier to copy that way as you hear the letter as a distinct sound rather than counting dashes and dots. On the other hand, high speed ops may choose to change the ratio of the length of dashes to dots as it may be clearer than the "standard" spacing.

This is called cutting off your nose to spite your face. That's a
ridiculous approach as your boycott does absolutely nothing to change the
situation.

At one company I worked for we actually kept a cross-reference sheet of English versus American terms for interpreting some of our customers requirements. So at least I know to have a spanner handy for emergencies like this.

Actually today I was pretty "knackered" just coping with the freeway traffic here.

One wonders what Mr. (or Ms.) Farnsworth would have said if someone
had told him something like that. There is point in reinventing the
wheel, if one believes they may have found something more efficient.
In this case, I'm not inventing anything -- I am facilitating the
learning of those who prefer full speed and Farnsworth spacing.

I've said it before, but perhaps not in this location: my current
location does not permit reception of HF signals. I have tried for
months with multiple antenna setups and have not been successful. I
have very limited VHF reception -- broadcast FM and television
stations do not come in, but I can receive on 2m and 440MHz. I
thought it was bad when I didn't have an HF rig, but it's worse to
have one and not be able to receive anything.

I'm glad it worked for you. I'm going for the tried and true Koch method of learning the characters at full speed. It might take more time for me to learn them all, but I'll know them, and that will be exciting. I am currently exploring another method of code generating that spits out words from characters that I already know since I'm a little concerned that five-letter groups might shape my learning in a way that won't help with real code. Other than that, though, I'm pretty happy with what I've got.

Brian> And CW contests are lousy code practice.

I agree with you on this. Hopefully by next Field Day I'll be able to participate with CW, but I am concerned that my straight-key efforts will be wasted on the memory keyers out there. Bah.

Jack.

Real hams will talk to anyone who is duly licensed under the rules and
regulations of their own governing body. Now if someone proves himself a

lid in the course of QSO, naturally we will bow out but only if the person has demonstrated that he actually is a lid. Besides it's seldom been foreign operators who have been a problem. The problem is right here in this country.

Both the pool AND answers are published.

Let's take a typical question:

What is the length of a dipole for 14.240Mhz?

Now since the questions AND answers are published, the prospective test
taker can simply memorize the numerical answer instead of having to learn
the appropriate equation and how to use that equation. Using the memorize
the numerical answer approach, the new ham has passed the test but is unable
to calculate the dipole that he/she may actually want to build for operating

Where the heck are you, Jack? I've received HF from many locations, about everywhere I've ever been and tried it. Is it an radio noise environment problem or what? Unless you live in the middle of one of the BPL tryout area I can't imagine not being able to receive W1AW on one of the bands..

I think it is because retention of the material is minimal when rote
memorizing for a test. I couldn't tell you anything that was on the tests I
took--because the material was not learned, it was memorized. No examples
of application, no scenarios for cause and affect, etc.

Hold up there, Bob Brock. SHOW ME where anyone has said you would "boycott someone because of their code status." No one has said a word about you doing that. YOU copped the attitude with the return of Jim's answer to you and my remarks. No where in the above material has Jim or I said a word about you boycotting anything. HOWEVER, in your earnest desire to be the victim, you missed that all Jim or I have done is answer your question, with nothing but sideline remarks back and forth to each other on the topic.

I don't know what ball you've served to my court--I am not playing on a court, I am submitting remarks to a discussion.

Possibly, Mike. I know you didn't ask me, but I can't help but make the statement that if even so, it would be nice for you to be astute enough not to roll everyone into your neat little package. Bob may be the kind of person you allude to, I don't know; he will have to speak to that with you. But, damned few people who don't like CW have avoided/boycotted higher class licensure until CW went away. In fact, I know no one like that. So, like I said, it would be intellectual of you to keep from using the broad paintbrush. Dick's is glued to his hand, so I don't even consider that he has the intellect to achieve such a lofty goal.

To respond to you as Spock would: logic and reasoning come from the frame of reference of a mindset--unless learned by scholarly methods. We all express our logic from the perspectives unique to us and if 'ere the two shall agree, far out. However, intellect is generally "out of the box" for us--we are born with it, with more or less of it, or without it.

This one may or may not be very intellectual; however his logic may be flawless from his perspective.

Now, I am going to sit back and watch... ;)

I'm in grid square CM88wa, between two very large hills which run for
several miles in a roughly north-south direction. My backyard is
twenty-five feet wide by nine feet deep and it is partially shared
with neighboring units. For political reasons, antennas have to be as
invisible as possible, so the highest I can get is six feet off the
ground and six feet from the house. I was able to construct a dipole
with twelve-foot legs, but I couldn't even get WWV, let alone an
amateur station. In addition, the electrical noise gives me a noise
floor of S7 -- some of which is my fault, as I've got six computers
running at any given time. Sometime this weekend I should make a
recording of what I hear on the bands so people can understand that
reception truly sucks at my house.

Dick> Dick

Ooooo, demmit! I missed something good here. That's what I get for picking
and choosing posts most of the time. Anyway, Brian, did you see a couple of
months ago where I posted the question to Dick about just what it would take

for the establishment of a disaster station for CW operation? As far as I know, he never answered!!!! And, of course, it's because he knew he was getting set up--we all know it would actually take quite a bit to be ready to establish a disaster response CW station--and that was the set up. I was going to ask DICK if he was ready...

Well.....

>
> Oh, I almost forgot- you're STILL waiting for a code free license!
Right!
>
>
> As for emergency gear, I have all that in a pair of metal equipment
cases, ready to grab and go, if and
> when needed. I'll take along a laptop just in case the need happens to be
for a digital mode. AND my
> Vibroplex Iambic paddle for CW.
>

PAH!!!! Grab and go. All of that?! You have got to be kidding...but wait, there's more:

>
> For power I have a lightweight switchmode AC supply AND an 800 watt
inverter. One does need to be
> flexible doesn't one?
>

Oh. OK. So, uh, don't persecute me here because I am lowly slow-code Tech+, but where you gonna get that AC and what if your car is crunched; and/or even when it runs out of gas? And, if you've got all this "stuff" ready to <chuckle> grab and go...and your vehicle is crunched, the trees are down so much that you can't move, or any number of other quite likely situations in a disaster, how will you choose to establish your CW station then, Dick? Really, let's drill it.

>
> After all, the need could be for something hightech and digital. But the
> possibility always exists that those needing to communicat from a disaster
area will have only modest old
> CW available.
>

The higher likelihood, and I think most seasoned EmCom folks will bear me out on this one, is that there will be many low-power talkies available, FRS, and the immediate disaster communications would be through simplex frequencies on 2M and 70cm, along with APRS stations set up and transmitting. Most disasters would have high hope of skilled CW ops for HW traffic, though.

>
> One does need to be ready, doesn't one?

>

Yep. And it doesn't sound like you are. The picture I get in my mind is almost humorous if it weren't so sad. DICK, standing there with his grab and go "stuff," wishing he'd thought to wheel mount those metal equipment cases because they sure are going to be heavy to drag or pick up and carry, with a tree or two down over his vehicle and the power lines dancing all over the place around him...with his metal carrying cases right there...

Oh, the the pain, the pain...

>
> So what's YOUR enmergency status,Slim? Do you have "permission" yet?
>
> Dick, W0EX FISTS #3939
>

He probably would be up, running, established and ready to communicate--WHILE getting the hell away from danger and to a location as directed by the local net.

ROFLMAO!!! N5TIE, down here, name is Robert. Had a neighbor that would raise the roof every time he got on CW. Well, one day she starts complaining. Called him up. He sets his station up to ID every couple of minutes and send a CW call (automatically). Then, he goes over to visit with the neighbor.

heh heh, she never called again.

You're right, Dee. That's the point I try to make...I rote memorized for
the test. Now, the argument for the above scenario could also be made that
the instrukshions can be looked up. I've built quite a few antennas. All
of them I used instrukshions for; and they all worked great.

For the purposes of the group, I don't think it's too bad an idea to
try to find out a few things about this one.

Here is a person that claims to know Morse code, but has refused to
test for it for nine years. This would appear to be the mythical person
that avoids Ham radio because of the evil Morse code (emphasis mine)
that The prez of NCI speaks of.

I say appears to be, because we have a person that comes in here like
gangbusters, manages to annoy a lot of us, and uses argument techniques
mostly designed to p**s us off, not to make a point.

I personally think this person is just a troll, and not a very good
troll either.

> Bob may be the kind of
> person you allude to, I don't know; he will have to speak to that with you.

Hehe, won't happen now.

> But, damned few people who don't like CW have avoided/boycotted higher class
> licensure until CW went away. In fact, I know no one like that.

Correct, and that is a big part of my decision that this is just a
third rate troll.

I like to come in here and have a good disagreement with people, but
his posts do not constitute a good disagreement. You've seen it yourself
- the odd leading questions, the asking of all sorts of quewstions,
followed by a refusal to answer any, and outrageous little things such
as assigning numerical value to non-numerical statements.

All things calculated to get an indignant response.

Gosh, I didn't think I'd find anyone here that I was pretty close to
agreement with. You seem to be the exception instead of the rule.

My feeling is that, unless this endless code debate ends sometime, ham
radio cannot move on in the testing area. I'd like to see a person
actually have to operate a radio in the band they are being licensed
for before they can take off by themselves. It could even be their
own radio. I think that they should know what all those nifty buttons
actually do. They should know how to enter into a conversation. A
list of "critical tasks" and "non-critical tasks" should be developed
and a person not be licensed until they can actually show competence
in those tasks. Those are the types of issues that I'd like to see
the ham community discussing rather than the endless code/no-code
debate that detracts from everything else.

All of the name calling and false accusations from both sides makes us
look silly to those who read it. I'm really glad that it will be
ending soon. Perhaps then, we can move on to more important issues.

I'm sure that not everyone will agree with performance based testing
in addition to a written test. However, perhaps a consensus could be
reached.

If that's the way that you feel, it's a issue that needs to be
addressed. The only issues I've seen talked about in this ng during
the many times that I've subscribed to it is this petty code/no-code
bs that detracts from any real discussion about code testing.

Don't misconsture this as agreement that "no learning" takes place.
However, I will agree that the learning is inadequate in that a
written test or even classroom training adequately prepares a person
to perform tasks without an additional step of hands on experienced
based training and/or testing.

Then perhaps the test pool needs to be reviewed and revised to include
the formula. Wouldn't that be more productive for the ham community
than this endless code/no-code drivel? It is something that I would
find myself in agreement with.

What would be wrong with requiring them to build a quarter wave dipole
that is resonate at a specified frequency as part of the test? That
is, if the test were changed to be written and performance based.

3118. Comments to FCC on RM-10787 No Code Proposal

Newsgroup: rec.radio.amateur.policy
Date: 2003-09-06 03:02:30 UTC
From: Dan Finn <djfinn2@bellsouth.net>
Message-ID: <z5c6b.15$A5.5@bignews2.bellsouth.net>
Source record: 76533

Sorry if this is a duplicate post. Bellsouth changed news servers and I
didn't see this posted the first time:

This comment was submitted to the FCC via their ECFS website tool on
09/01/2003 in respect to RM-10787:

This is to oppose RM-10787, which proposes to eliminate the 5 wpm Morse code
test for amateurs who which to transmit on the "HF" frequency bands (30MHz
and below). These frequencies are a precious resource and Morse code has
proven, time and again, to be the only feasible frequency mode available 1)
that can be useful during emergencies especially when band conditions are
bad 2) for communications with other amateurs in poorer countries than the
USA. Allowing access to these unique frequencies by individuals unfamiliar
with Morse code would result in a structure wherein the Morse-only subbands
would likely be modified to allow voice. In doing so, those individuals
worldwide who wish to communicate via Morse would be deprived of usage of
the common Morse frequencies and be forced to upgrade to mode that they may
not be able to afford, would likely require higher power levels to
communicate, especially on the 40m and 80m bands and result in either voice
communications that are less reliable than CW or digital, which is more
expensive and not generally available in some countries that use Morse
extensively such as the Philippines, India, some parts of Russia, Africa and
even in the case of expeditionary groups in such places as the Antarctic.
Finally, the US still needs to have a stable population of individuals who
can send and receive Morse code in times of communications emergencies and
certain military situations. The current population of such individuals will
suffer attrition rates and almost certainly cease to exist in the future
without the current Morse code requirements for amateur operators. Usage of
these frequencies is a great privilege and knowledge of Morse is a very
small price to pay while our Nation benefits from having a pool of competent
Morse operators. Thank you for the opportunity to comment on this proposal.

Respectfully Submitted,

Daniel J. Finn
KR4AJ

So, instead of the continual code/no-code debate, why aren't these
issues discussed here? If the test pool questions are such that the
requred areas of knowledge aren't addressed, changing those questions
(or perhaps the testing itself) would be an outstanding subject to be
discussed here. However, it's not usually discussed because all
threads lead to the code thing.

I have my own view on the code issue and it's not going to change
anymore than anyone else is going to change theirs. Our minds are
made up. However, I think that people on both sides of that
particular issue see areas where they would agree that the actual
testing needs change.

Call it what you like. I weighed the benefit of HF against conforming
with a requirement that I didn't agree with. I felt that by
participating I was helping it to continue. There are a lot of hoops
that I would be willing to jump through to get HF privileges. Code
isn't one of them.

Call it a matter of personal ethics. Upgrading would have been the
easy way out.

Well, since CB never required a test, I'd have to say that your question makes no sense to me. If you are referring to MURS, FRS, and GMRS, they aren't in the ham bands. Are you proposing testing and incusion of those frquencies into the ham bands?

As near as I can figure out, it's got to be something like that. You do know that hams can use those frequencies too if they get the licenses that may be required. Don't worry, they don't require you to take a test or anything.

I use MURS to keep in touch with my non-ham daughter. My phone at home stays constantly busy and she isn't interested in taking the test. I guess that she too is condemned to no-code/non-ham hell. She seems pretty content with her fate though. She really want's a cell phone, which is also near a ham frequency, but I got her a horse intstead.

>
>Kim W5TIT

OK Kim, I'll keep you in suspense no more. Whether some like to admit
it or not, the senseless Morse Code debate will soon be history. I'm
here to see if the ham community will then move on to something really
important like revising the written tests and the test pools so that
when someone passes the test, they actually know how to use a radio,
set up or build an antenna, the protocols on the frequencies they are
authouized to use, how to minimize RF exposure and stay within safe
levels. If someone doesn't know what all those buttons do on their
radio, they shouldn't be licensed to use it. If they don't know
enough not to use repeater imputs for simplex operation, they
shouldn't be licensed to use the frequency.

It's my hope that when it is all over with Morse, that the ham
community will address the real important issues and Morse ain't it.
It is at best a scapegoat that hams can argue about while the more
important issues of licensing inept operators is ignored. IMO, the
ham community has some really screwed up priorities and hopefully,
with the endgame for code in sight, they may....just may come to grips
with some real issues.

I'm hopeful, but not expectant.

What's more outrageous is people demanding supporting documentation
for a number that the group says doesn't exist.
>
> All things calculated to get an indignant response.

Whatever trips your trigger guy. I live my life by my standards.

BTW, here is why I learned Morse. Ironic isn't it?

<http://www.google.com/groups?q=code+group:rec.radio.amateur.policy+author:bob+author:brock&hl=en&lr=&ie=UTF-8&oe=UTF-8&as_drrb=b&as_mind=12&as_minm=5&as_miny=1981&as_maxd=5&as_maxm=9&as_maxy=2001&selm=34c35790.2985325%40news.his.com&rnum=2>

Over the last couple of years, I have made a few posts about my
feelings that code should not be a requirement for access to HF
frequencies. While I have not changed my mind on that position, I do
have a question/request from the pro-coders in the NG.

Recently an amature radio operator in my area was operated on for a
growth in his throat. The operation left him without a voice and he
has been using Morse Code on one of the local repeaters at about 5
WPM. Because of this, I now want to learn code so that I can
understand what he is saying.

So, would any of you pro-coders like to help a no-code tech upgrade?
I have to warn you in advance that, even after I learn the code, I
will still not support code testing as a requirement for HF access.
This is a personal decison that I am making because I want to do all
that I can to accomadate another person who wants to use amature radio
and this is the only way that he can do it.

Please don't turn this request into part of your never ending debate. The other operator could use packet as an alternative. This is just a personal choice by me. The code should stand or fall on it's own merits. Anyway, does anyone on either side of the debate want to help me learn it? This is a legitimate request. It is not spam and it is not flame-bait. My E-mail address is real...please respond if you have any materials or advice that will help.

3127. BPL coming to Boise in September

IDACOMM and Ambient Announce Partnership for Deployment of Broadband Over Power Line Technology

http://www.marketwire.com/mw/release_html_b1?release_id=57084

BOISE, ID -- (MARKET WIRE) -- 09/03/2003 -- IDACOMM, Inc., a subsidiary of IDACORP, Inc. (NYSE: IDA), and Ambient Corporation (OTC BB: ABTG) today jointly announced a memorandum of understanding to initiate in early September a pilot test of Broadband over Power Line (BPL) technology at up to 100 residential and commercial locations in Boise, Idaho.

Ambient's technology is designed to facilitate the transmission of data over medium-voltage and low-voltage power lines directly to the end-user's computer. IDACOMM's BPL service will provide broadband Internet access to the power outlets in the home or business participating in the pilot program.

IDACOMM is planning the most complete and sophisticated pilot test of an end-to-end broadband solution conducted to date, according to Matt Collins, IDACOMM's director of BPL deployment. The pilot test will include many aspects of a complete broadband offering not normally associated with BPL technology tests, including subscriber authentication, bandwidth monitoring and control, and advanced services such as video streaming and Voice over Internet Protocol.

"The combination of Ambient's technology and IDACOMM's backoffice systems will create a best-of-breed broadband solution for our subscribers. We look forward to working with Ambient and their technology throughout the pilot program," said Chris Britton, president and chief executive officer of IDACOMM.

John J. Joyce, CEO of Ambient Corporation, stated, "Adding IDACOMM to our fast-growing group of strategic partners brings us one step closer to realizing and accomplishing our strategic plan of commercial deployment of our Power Line Communications technology."

About IDACOMM:

IDACOMM provides fiber optic broadband services for organizations in high technology, manufacturing, distribution, health care, education, and state and local government. Velocitus, a subsidiary of IDACOMM, provides high-speed wireless Internet service. IDACOMM and Velocitus currently serve over 25,000 customers in Idaho, Washington, Oregon, California, Nevada, Utah, New Mexico, Arizona and Virginia. www.idacomm.com or www.idacomm.com/bpl

About IDACORP:

Boise, Idaho-based IDACORP, formed in 1998, is an energy and technology holding company comprising Idaho Power, a regulated electric utility; Ida-West Energy, an independent manager and developer of power projects; IDACORP Financial, an investment vehicle that makes investments primarily in affordable housing projects; IdaTech, a developer and producer of fully integrated fuel cell systems; IDACOMM, a telecommunications subsidiary providing high-speed Internet access technologies; and IDACORP Energy, a marketer of energy and energy-related products and services.

IDACORP Media Contact:

Jeff Beaman, jbeaman@idacorpinc.com

About Ambient Corporation:

Ambient Corporation (OTC BB: ABTG) is a development stage company engaged in the architecture, design, development, and implementation of a proposed comprehensive high-speed communication infrastructure designed to utilize existing electrical power distribution lines as a communication medium -- Power Line Communication -- PLC.

Ambient Corporation (OTC BB: ABTG) is a publicly traded company incorporated in the United States that focuses on Powerline Communication telephony-related product offerings, Internet and E-Commerce for a variety of exciting new consumer applications, and a basket of utility-related services. www.ambientcorp.com

RESTRUCTURING: PRO CODE PETITION FLED WITH THE FCC

The proponents of retaining Morse testing for all candidates for a United States Amateur License with high frequency operating priveleges are striking back. This, with a petition that not only asks the F-C-C to retain the 5 word per minute C-W exam, but to also require that Extra class pass a 12 word per minute test. And the organization that I sponsoring the measure also wants written exams stiffened as well. Amateur Radio Newsline’s David Black, KB4KCH, has more on this attempt to row against the deregulatory tide:

--

For the past couple of months, more and more countries have been steering toward making amateur radio code-free. That follows the July abolition of Morse code testing by the World Radiocommunications Conference. In the United States, the Federal Communications Commission has before it six petitions essentially seeking to remove Morse code from amateur radio in the U-S. Supporters of the code have been quiet--until now. A group called FISTS--said to be the largest code advocacy organization in the world--is leading an effort to make Morse code a more prominent part of ham radio and the licensing process.

FISTS is an international Morse code preservation society based in the United Kingdom with chapters world-wide. Its stated objective is to further the use of the Morse code in Amateur Radio communications. The group's north American chapter has delivered a detailed rule-making request to the FCC that seeks more than just making sure that Morse code testing is retained.

FISTS asks the Commission to raise the standards in other areas of testing, too. Nancy Kott, WZ8C, is U-S Chapter Manager for FISTS, and is Editor of Worldradio Magazine. She wrote the rule making request. Among the proposals are keeping code as a mandatory testing element for the General and Extra class licenses. General licenses would require 5 words per minute and Extra class

licenses would require 12 word per minute code proficiency.

FISTS says passing a 5 word per minute code test is no hindrance to people wanting to upgrade, and cites the large number of Technician class operators upgrading to General as proof.

FISTS also says that those aiming for the Extra license should be able to demonstrate Morse code skill at 12 words per minute.

Today's written exams are too easy. At least, that's what FISTS seems to suggest in noting that the FCC sought comments before amateur radio's restructuring about whether fewer morse code requirements should be offset by increased technical content on written questions. FISTS notes that nearly every commenter said yes, but the Commission's Report and Order failed to address the issue.

FISTS says the commission has a chance now to make General class written tests equivalent to the Advanced class written tests before restructuring. In other words, go back to the way it was, with tests that are harder and more thorough.

FISTS wants the Extra class exam to be more thorough, as well. It wants the FCC to require written knowledge of circuit design, information theory, digital methods and encoding schemes and software radio. FISTS says candidates for the Extra class ticket need to show a more thorough knowledge of propagation and geophysics than current tests require.

For the Technician class operator, FISTS suggests merging the Technician and Tech-Plus classes and not require a Morse code exam. But FISTS says technical content should be emphasized and should include the digital modes. FISTS advocates extending Technician Class privileges to include digital modes within the current Novice subbands, which it says should be kept. The group says that would let Technician Class operators participate in the explosive growth in digital applications occurring within the Amateur Radio Service on the high frequency bands.

But when it comes to giving Technicians even limited phone privileges on HF, FISTS says no. The group says the rush of upgrades by Technicians to higher classes following restructuring indicates that the barrier between General and Technician classes has already been lowered enough without needing to go any further.

FISTS also suggests one other big change and that involves taking license tests. Right now, if you fail an exam, you can go back and try again at the same session. FISTS is asking the Commission to impose a 24-hour waiting period before being able re-take either a failed written test or a failed code test.
For the Amateur Radio Newsline, I'm David Black, KB4KCH.

--

There’s 14 pages to the FISTS filing. You can read it on-line at ftp://ftp.qsl.net/pub/n1ea/FIST_FCC_Petition_8-30-303.pdf. As we go to air, no Rule Making designation has been assigned to the FISTS request.

(ARNewsline(tm))

**

RESTRUCTURING: ACA PAPER SUGGESTS TOTAL RESTRUCTURING OF VK HAM RADIO

Meantime, down-under the Australian Communications Authority has surprised that nations ham radio community with a proposal to totally restructure that nations Amateur Radio service. Jim Linton, VK3PC, has the rest of the story.

--
Radical changes are being proposed for the Amateur Service in the just issued ACA discussion paper entitled "A Review of Amateur Service Regulation.” The paper is sure to stimulate debate, particularly its reference to interference experienced by domestic television and radio receivers, and a suggestion that radio amateurs should take full responsibility to resolve these problems.

A major purpose of the paper is to discuss the implementation of the changes arising out of the World Radiocommunications Conference held in Geneva this year. These changes include the end of mandatory Morse code tests for amateur licences, amateur callsigns, third party traffic, communications during disasters, and reciprocal and visitor licensing.

The ACA, as expected, has also taken the opportunity to discuss restructuring of amateur licensing, the regulatory controls and administration of the Amateur Service in Australia. The paper acknowledges the WIA's proposal for a new entry level licence, and the potential for it to replace the current Novice licence. It discusses restructuring of the current system of seven different amateur licence types (five operator, plus repeater and beacon), to create only two operator licence types - Unrestricted and Novice.

On a positive note the paper hints that the removal of Morse code tests for amateur licences may occur earlier than the ACA's current timetable. It states that if there is sufficient public support, the code requirement could be removed prior to its proposed implementation of regulatory changes flowing from its discussion paper in early 2005.

In a controversial proposal, the ACA is to consider the introduction of a "no interference" policy for radio amateurs. It states "The operation of an amateur station, which is essentially a hobby, should not disturb another person's activities, such as television viewing or radio listening, or affect commercial activities." Should the "no interference" policy be introduced, it would be a major shift from the current ACA policy that provides for a shared responsibility between the radio amateur and his neighbour for the resolution of an interference problem.

To make it clear, the ACA explains "This would mean that an amateur must not cause interference to other radiocommunication services. If causing interference to another service, the obligation will be on the amateur to resolve the problem."

--

The Australian Communications Authority has set a deadline of October 31st as the last day for hams to file responses to its discussion paper. The 50-page discussion paper can be downloaded from www.wiavic.org.au/news or www.wia.org.au/vk4 (Q-News)

**

RADIO LAW: THE ACADEMY OF MODEL AERONAUTICS SAYS NO TO BPL

Back here in the United States, word that the Academy of Model Aeronautics is saying no to the introduction of Broadband Over Powerline or B-P-L technology. In Reply Comments to the FCC, the 175,000 member aviation hobby group says that it is concerned that B-P-L deployment could cause harmful interference to users of Radio Controlled systems and pose a safety hazard to aeromodeling equipment and spectators.

In its filing the A-M-A says that Broadband Over Powerline holds the potential to severely interfere with radio controlled models which operate in or near the 27, 50, 72 and 75 MHz bands. All of these fall within the 1 point 7 through 80 MHz spectrum where the FCC proposes to permit B-P-L to operate.

To the A-M-A this means that Broadband Over Powerline may not yield the benign environment the Commission expects. Also, that it could result in an unanticipated negative impact on Radio Controlled operations. And that’s what it has told the FCC. (AMA release)

RADIO LAW: MARYLAND COUNTY FILES RFI CONTROL APEAL TO FCC

Still with regulatory news, the CGC Communicator reports that Anne Arundel County, Maryland has filed an Application for Review before the full Commission. This, in the hope of reversing an order by the FCC’s Wireless Telecommunications Bureau that prevents the County from entering into the radio frequency interference control business through zoning laws. Laws that could even impact on ham radio, C-B and GMRS operators.

In 2001 Anne Arundel County, Maryland, had enacted legislation requiring that, prior to receiving a County zoning certificate, owners and users of any sort of telecommunications facility had to show that their installation would not degrade or interfere with the County's public safety communications systems. The ordinance also permitted the County to revoke a zoning certificate where degradation or interference was found.

Alarmed, telecommunications providers took the ordanance to the FCC asking that it be overturned. Last July it did just that. It In considering the case, the

Commission found that the challenged provisions of the Anne Arundel County zoning Ordinance infringe on the Commission's exclusive jurisdiction over RFI and are preempted under the doctrine of field preemption. Now the county is upping the antie.

In its pleading, Anne Arundel County maintains that reversal of the Bureau's decision is required because the Order conflicts with a controlling statute of the Communications Act. The County further states that, pending implementation of the Commission's 800 MHz proceeding, the Bureau's decision leaves public safety systems of local governments such as the County's vulnerable and powerless to deal with what it terms as -- quote: " potentially deadly radio frequency interference from wireless systems of commercial mobile radio service providers operating in the 800 MHz band."

The FCC has invited comments on this matter by September 26. More is on-line at the U-R-L featured in this weeks Amateur Radio Newsline printed report.

(DO NOT READ: The complete story in the the FCC website at http://hraunfoss.fcc.gov/edocs_public/attachmatch/DA-03-2734A1.doc) (CGC)

**

RESCUE RADIO: CELL PHONE HELPS RESCUE FCC OFFICIAL

A cellular telephone has helped to rescue two men dangling in a gondola buffeted by severe winds near Aspen Colorado. One of them is the chief of the Federal Communications Commission's Wireless Bureau who turned to the phone during an ordeal where he was trapped for more than two hours. Amateur Radio Newsline's Bruce Tennant. K-6PZW, reports:

--

According to news reports John Muleta leaned on the technology he oversees when he and Robert Pepper, an adviser to FCC Chairman Michael Powell, got stuck in the gondola on Monday, August 19th. The two men had used a break in a telecommunications summit to take in the view from atop of 11,000 foot Aspen Mountain.

Their sightseeing trip turned into an ordeal when the tram service abruptly shut down during their return. It stranded Muleta and Pepper n the enclosed gondola part way down the mountain. When help was slow to arrive, Muleta used his cellular phone to call for assistance. But the local service provider provider apparently did not have the latest "enhanced" 911 technology and could not locate him precisely. So Muleta simply directed the rescue effort over the phone.

Once off the mountain Muleta told the press that he was very happy that he had remembered to carry his cellular telephone with him. He added that had he not, that it would have been a much different scenario. This, if they had been trapped all night with the weather getting getting colder.

For the Amateur Radio Newsline, I'm Bruce Tennant, K6PZW, in Los Angeles.

--

Ironically, just before he left for the trip Muleta told an interviewer that the FCC is looking at ways to accelerate the deployment of Enhamced 911 service. This is the system that uses G-P-S technology to more precisely locate callers. (Published News Reports)

**

ENFORCEMENT: INTERNET SALES BRING LETTER OF INQUIREY

The FCC has sent a letter of inquirey to Randy Owen, N9UOM, of Toma Wisconsin regarding his license renewal application. The Commision is asking Owen about his apparent involvement in the sale of non-certified C-B transcievers and non-certified High Frequency amplifiers over the Internet in 2002. Owen is the owner of Roper Electronics whose website was advertising the merchandise for sale. (FCC)

**

ENFORCEMENT: FORMER HAM WARNED NOT TO CONTACT THE FCC

A brefly licensed former ham has been told not to call the FCC and wait for it to contact him. The agency’s Daryl Duckworth, NN0W, explains:

--

(Duckworth) “Jack Gerritsen of Bell California has recieved a warnng notice about a violation of ex-patrte rules after his license had been set aside. His repeated calls to the offices of Administrative Law Judges is a violation odf the Commission’s rules against ex-parte communications. Ex-parte rules place restrictions on contacts with Commission decision making personel.”

--

Gerritsen’s license and KG6IRO call sign were set aside only days after they were issued back in November of 2001. This after the FCC learned that he had been convicted in California state court of a radio related offense. It also recieved complaints alleging that Gerritsen had been on the ham bands prior to recieving his license. (FCC, RAIN)

NAMS IN THE NEWS: 9M2TO WINS UKDXF AZWARD

Some names in the news. The Chiltern DX Club of the U-K DX Foundation has awarded its prestigious 'Local Heroes' Award for 2003 to Tex Izumo, 9M2TO. The club’s awards committee recognized the commitment Izumo has shown in providing many contacts and confirmations with amateurs world-wide on all bands from 160 to 6 metres over a period of many years.

This annual award goes to an operator resident in a DX country who has provided excellent service to the DX community and who maintains a high standard of operating without the benefit of major sponsorship. The award carries a cash prize and a year's honorary membership in the Chiltern DX Club. (GB2RS)

**

NAMES IN THE NEWS: HAM APPEARS ON TV MOTORCYCLE SPECIAL

Bob Mastrangelo, WA6ZTA, of Thousand Oaks Californis reports that he recently participated in the filming of a motorcycle special that aired August 28th on The Travel Channel. The show is called Revolution on Wheels, and Bob is seen in the beginning riding his yellow Honda Gold Wing and is interviewed about 25 minutes later. Since The Travel Channel does repeat these programs, check local listings to see when it will air again and keep an eye open for WA6ZTA. (ARNewsline(tm))

**

NAMES IN THE NEWS: KB4KCH NEW VP OF ARNEWSLINE(TM)

The Board of Directors of the Amateur Radio Newsline has confirmed the appointment of David Black, KB4KCH, of Helena, Alabama, as its Vice President. Black, whom you heard earlier in this newscast will fill out the unexpired term of Roy Neal, K6DUE, who died last month following heart valve surgery.

David Black, KB4KCH, is owner First Frame Video in Birmingham, Alabama. He is also a 20-year veteran of the broadcast television industry. Prior to starting First Frame Video, David worked as a television news reporter and weather anchor at WVTM, the NBC affiliate serving Birmingham, Alabama. KB4KCH also has extensive radio and television experience while working in broadcasting in Texas.

In addition to his reporting and anchoring Amateur Radio Newsline for well over a decade, KB4KCH is active in amateur radio Skywarn and emergency communications. He is past President of the Birmingham Amateur Radio Club and is one of the founders of ALERT Alabama. This is an organization of radio amateurs specializing in Skywarn communications to assist the National Weather Service in the Birmingham area. (ARNewsline (tm))

VOLUNTEERISM: HCI NEEDS VOLUNTEER SCHEDULES EDITOR

If you are a Shortwave Listener, live on the West Coast and want to edit an S-W-L newsletter, listen up. This one is for you.

Duane Fischer who heads up the Hallicrafters Collectors International needs a volunteer editor who can post the annual schedules of worldwide Shortwave radio stations. The site, located in cyberspace at www.w9wze.org/SWL contains loggings, current news, tidbits and program schedules. If you would like to become the Schedules Editor, please contact Duane as soon as possible at

dfischer@usol.com and tell him you heard about it on the Amateur Radio Newsline. (ASWLC, WDX6AA)

**

HAM RADIO IN SPACE: ARISS PACKET UPDATE

An update to last weeks story on the wayward packet radio system on board the International Space Station. Those of you who were on the air on Sunday, August 24 are aware that the packet system was re-activated around 12:00 UTC. Shortly thereafter, the ARISS team received reports from the general ham community that the packet system was operational.

Over the next 9 hours, many hams around the world sent digital signals through the packet system. But later that day, at around 21:22 U-T-C, the packet system abruptly stopped operating while traveling over the Western part of the U.S.

According to AMSAT's Frank Bauer, KA3HDO, the ARISS team has had several discussions on next steps to get the system back up and running properly. But it may be some time before this can be accomplished. This is because the debug efforts may be delayed further due to the arrival of the Progress 12P re-supply ship which will be keeping the two man crew very busy.

Once time is available, the plan is to have the crew report out on the status of the packet module and then to recycle the power. This should bring the packet system back up. If the system abruptly shuts down again after a few hours the ARISS team will then ask the crew to attach a computer to the packet module, download the current parameters to the ground and reset the module.

Stay tuned. ARISS promises to pass along word of progress as it happens. (AMSAT, ARISS)

INTERNATIONAL - AUSTRALIA: NEW BANDSPACE FOR VK HAMS

On the international beat, word than all-Australian radio amateurs will be allowed to operate between 3.776 and 3.800 Mhz effective from the 1st of January 2004. The move follows a proposal put to the Australian Communications Authority by the Wireless Institute of Australia several years ago. (GB2RS)

**

INTERNATIONAL - WORLDWIDE: LIGHTHOUSE WEEKEND A BIG HIT

Meantime, reports from the around the world indicate that there was allot of activity in this years International Lighthouse and Lightship Weekend operating event. Jeramy Boot, of the GB2RS News Service has the details:

--

Mike Dalrymple, GM4SUC, the organiser of the International Lighthouse / Lightship Weekend reports that a record number of stations - 369 - were established at lighthouses and lightships in 48 countries - another record -

over the weekend of the 16th and 17th of August.

The official list of participants can be found on the ILLW website. Next year the event will be on the 21 and 22nd of August 2004, and Mike invites individuals and groups to join in with a weekend of enjoying radio from a lighthouse or lightship.

Jeramy Boot, G4NJH

--

The International Lighthouse website is in cyberspace at http://illw.net. GM4SUC adds that as soon as you have your plans for participatiin in the 2004 Lighthouse Weekend made to let him know. You can contact Mike by e-mail to GM4SUC@compuserve.com (GB2RS)

**

DX

In D-X, word that IN3VZE will be active once more as 7Q7CE from Malawi through the 21st of September. QSL as directed on the air. (GB2RS)

And the K3EOD Contest Team will be active in the September VHF UHF contest September 13th to the 14th. The group consists of W3EFH, K3EGE, WR3P, W2SJ and K3EOD. They will be on all bands from 6 meters RF through visible light using SSB, CW and laser communications. For more information please e-mail k3eod@juno.com (VHF REflector)

Lastly, HL1IWD reports that he will be visiting Honolulu through the 12th of September, and will operate as KH6 stroke KB1AIM on 20 metres, mainly CW. QSL is via HL1IWD. (Modern DX)

**

THAT FINAL ITEM: NO MORE USE OF THE WORD E-MAIL IN FRANCE

And finally this week, a note from France where the governmet has said goodbye to the term e-mail in favor of the native language term courriel. A word that linguistically sensitive France is now using to refer to electronic mail in all official documents and hopes that the public will adopt as well.

Frances’ Culture Ministry announced a ban on the use of e-mail in all government ministries, documents, publications or Web sites on July 18th. This, as the latest step to stem what it sees as an incursion of English words into the French language.

Courriel is a contraction of the two words and is a term that has often been used in French speaking Quebec Canada. The ministry's General Commission on Terminology and Neology insists Internet surfers in France are broadly using the term “courrier electronique'' instead of e-mail - a claim some industry experts dispute.

And we thought that you would like to know! (Published reports)

Well, there you have it.

>My feeling is that, unless this endless code debate ends sometime, ham
>radio cannot move on in the testing area. I'd like to see a person
>actually have to operate a radio in the band they are being licensed
>for before they can take off by themselves. It could even be their
>own radio.

That works for me!

>I think that they should know what all those nifty buttons
>actually do.

That's a problem, because many rigs have so many features and menus that almost
nobody knows *all* of them. But if you're talking about basic operation and
operating practice, there's no reason it couldn't be done.

>They should know how to enter into a conversation. A
>list of "critical tasks" and "non-critical tasks" should be developed
>and a person not be licensed until they can actually show competence
>in those tasks. Those are the types of issues that I'd like to see

>the ham community discussing rather than the endless code/no-code
>debate that detracts from everything else.

Actually, this very idea was discussed here over 5 years ago. Here's what I proposed:

(BEGIN QUOTE):

It seems to me that just dropping the code test would remove the last vestige of skills testing from the licensing process. Perhaps the code test should be replaced by a real practical operating test.

Such a test could work like this:

Two typical ham rigs are set up so that the operators of each one cannot see or hear each other. The rigs are connected to dummy loads which are located adjacent to each other. (The idea is to permit a "contact" from one rig to the other, without putting much of a signal on the air). The testee and a VE sit at one rig, and another VE sits at the other. The testee is given a sealed envelope and a few minutes to get familiar with the operation of the rig. (The operating instructions for the rig would be available at any time).

When the actual test begins, the testee opens the sealed envelope and a timer is started. Inside the envelope are a set of instructions telling the testee to go to a specific frequency and call the VE at the other rig, make contact, and send the enclosed formal message. The VE at the other end has a similar sealed envelope, but with a different message, which is to be received by the testee.

The idea is to test the actual radio operating skills of the testee under controlled conditions. There would be a time limit, too. (That's what the timer is for). The testee would have the choice of CW, voice or a digital mode for the test.

Time limits and exact instructions would vary with the mode and the class of license being tested. Higher class tests could have shorter time limits, longer messages, and more complicated instructions, such as having to change frequency at a certain point in the contact, having to pick the frequency from a list that includes "wrong choices", etc.

Scoring would be on the basis of mistakes. If a word in the messages is missing or misspelled, that's a mistake. If nonstandard procedure or phonetics are used, each deviation is a mistake. If the time limit is exceeded, each minute over the limit is a mistake. Exceed a certain number of mistakes and the test is failed. Asking for a repeat of a missed word would NOT be a mistake.

Typical exams (but not the exact exams themselves) would be available as study guides. Audiotapes of typical tests could be used for study as well.

Yes, it's a bit more complex than a straight code receiving test, and requires some equipment and two VEs to conduct it. (Perhaps the VE at the testee's position isn't really needed). But it could be done quite easily, and in such a way as to test real operating skills. The rigs used need not have lots of features, and QRP power levels would be more than adequate. Or a "rig simulator" that's really a gussied-up intercom could be used.

Is there any real reason such testing could not be done? Is it expecting too much that a prospective ham be able to pass such a test? I think not!

(END QUOTE)

That description was part of a longer post from June 19, 1998. For the original, see:

http://groups.google.com/groups?selm=1998061910321401.GAA21892%40ladder03.news.aol.com&output=gplain

Note that one of the features of the test is that the person being tested gets to choose the mode used. Those who like Morse best can be tested using that mode, etc.

I reposted the idea a few times but always got the same response from the nocodetest folks: Opposition to the idea of ANY form of practical skills test.

>All of the name calling and false accusations from both sides makes us
>look silly to those who read it.

That's true.

>I'm really glad that it will be ending soon.

You know something we don't? FCC has been extremely slow in acting on various proposals over the past few years. The 2000 restructuring took almost two years, start-to-finish.

Frankly, given the FCC's words in the Report and Order to 98-143 (the restructuring), I'm surprised that Element 1 is still in place. FCC said there was "no regulatory purpose" for code testing *except* meeting the treaty requirement. Treaty requirement is gone. Based on its own logic, FCC now has no reason at all to keep Element 1. Yet they are going through the whole NPRM cycle again. Why? Could it be they have changed their minds?

However the issue is decided, I doubt that all of the name calling and false accusations will stop. You should see some of the names I've been called for daring to disagree with some folks, and for pointing out their mistakes in fact, logic and math.

> Perhaps then, we can move on to more important issues.

Maybe - but given the resistance to my idea of 5+ years ago, I doubt it.
>
>I'm sure that not everyone will agree with performance based testing
>in addition to a written test.

That's an understatement. Google up the responses I got from the above post. Some of 'em aren't pretty.

>However, perhaps a consensus could be reached.

Even if that happens, the FCC then has to be sold on the idea.

--

So what *is* your purpose here, Bob?

However refusing to upgrade shows that your hate for code exceeds your love
of ham radio. While it's your choice, it seems pretty silly to me.

Ok, here you've said you already know code but now want to learn code. This
is very confusing.

I would be more than happy to help anyone upgrade but no one has ever taken
me up on the offer.

>What is the length of a dipole for 14.240Mhz?

I assume you mean "half wave"...

What kind of half wave dipole? Made of wire or tubing? Of uniform thickness or tapering? In free space or near other objects?

The answer depends on a bunch of things!
>
>Now since the questions AND answers are published, the prospective test
>taker can simply memorize the numerical answer instead of having to learn
>the appropriate equation and how to use that equation. Using the memorize
>the numerical answer approach, the new ham has passed the test but is unable

>
Exactly!

Now suppose we rewrite the question to:

"What is the formula for computing the length of a half-wave dipole for 14.240 MHz, if the dipole is made of #10 wire and is in free space?"

The person being tested then memorizes the formula from the choices in the pool but doesn't necessarily know how to use it. Same problem.

For another example, knowing that E = IR and P = EI doesn't guarantee that someone will have the sense to realize that they should not try to use 50 feet of #18 zip cord to connect a 100 watt transceiver to its 13.8 volt power supply.

The test pools are under constant revision. Anyone can submit proposed Q&A to
the QPC for consideration.

> If someone doesn't know what all those buttons do on their
>radio, they shouldn't be licensed to use it.

Then we'd need rig-specific licenses.

And what would you do about homebrew rigs like mine?

>If they don't know
>enough not to use repeater imputs for simplex operation, they
>shouldn't be licensed to use the frequency.

Now that makes sense! But such things are already addressed in the question
pools.

The problem is that what needs to change is the test methodology. By lumping
all of the subjects into a one-size-fits-all written test, prospective hams can
have huge holes in their knowledge and still pass because of strenghts in other
areas. One answer to that is subelements.

The big problem is convincing FCC that testing at such a level is needed. For
more than 25 years, FCC's view towards amateur radio testing is to reduce the
license requirements and make the licenses easier to get, not harder. That's
one of the reasons some folks defend the code test so diligently - they know
that if it goes, it will not be replaced by any other test, nor will the test
methods used for the written be improved.
>
>It's my hope that when it is all over with Morse, that the ham
>community will address the real important issues and Morse ain't it.

Morse will continue to be a major part of amateur radio with or without a test.
The test, however, is symbolic of the changes that have been ongoing for a long
time.

>It is at best a scapegoat that hams can argue about while the more

>with some real issues.
>
>I'm hopeful, but not expectant.
>
I think you will find that the exact same problems will arise in connection with any move to increase license requirements. The "Smith chart solution" post in another thread is only half in jest.

There are already folks like W5YI campaigning for less WRITTEN testing, saying the Tech test is too hard.

3137. Low reenlistment rate

Newsgroup: rec.radio.amateur.policy
Date: 2003-09-06 13:35:54 UTC
From: K0HB <k0hb@earthlink.net>
Message-ID: <b71720b321f483edfb53ce7de21e4078.128005@mygate.mailgate.org>
Source record: 76552

Between February 14, 1991 and July 5, 1991, the Commission granted 1,925 new Technician class licenses under the no-code provisions. A couple of guys have done research which shows that 1,880 of those licenses have not been renewed or upgraded to a higher class license and are beyond the two year grace period. That equates to a retention rate of only 2.3%.

Any ideas for increasing the reenlistment rate?

Oh, geez. Here's another Morse Elitist that apparently advocates
sending code so piss poorly that it can't be computer copied. Hoo-ah!

Drop the no-code provision of the Tech license, obviously.

With a 97.7% failure rate, I'd say the new policy is a real loser. - We better drop it fast and return to what worked better in the past.

I predicted something like this, but not to such a degree, when so many of the new no-code techs showed a generalized disrespect for the PART97 regs and the traditions of amateur radio. It was obvious that many of them did not care at all about the hobby. - They just wanted to know what they could get out it, what they could get away with. Many of them spent more time bashing the hobby than anything else. As you have noted, almost none of them went on to progress and advance themselves as hams.

Personally, I think we will be much better off without most of those "hams", and that we should avoid policies that increase membership in this way in the future. We should do as we did in the past, emphasizing quality, not quantity of our membership.

According to your figures Hans, the no-code tech deal did the hobby more harm than good.

Jack, you must understand something. DICK has been in every
situation, probably including your own. If DICK says he's able to
receive HF everywhere he's -tried-, he implies that you aren't trying
hard enough. In the end, it comes down to CW always getting through.
You're using CW, right?

There's nothing at all wrong with having some part of the test be based on
something related to performance--other than CW; comment on that in a
moment--if there could be a generally agreed upon topic. I think
establishing something like a digital station would be more appropriate than
building an antenna, because I think what should be tested is something
everyone will do at one point or another. While not everyone may dabble in
digital, APRS, SSTV, or whatever, everyone will have to establish a radio
set up at some point or another. The best would be a sucessful mobile
installation, but doing testing outside just wouldn't be feasible.

On your latter comment, be careful how you word things in this debate: the
test is performance based right now. It baseed on one's ability to
understand CW, and that is performance.

To use Hans' spelling: for crying out phucking loud, Bob. Either you
literally have just decided to pop in and don't read any other time; or you
really are just trolling. This newsgroup runs several, *several* topics at
any given time. You can choose whatever ones you would like and even create

your own. But, you aren't going to change the debate on CW and no one ever will. I just laughed hysterically at another post of yours, where you said, "thank goodness it will all be ending soon." That's ludicrous. You're either young or blissful if you think the CW debate is going to end or go away.

> If the test pool questions are such that the
> requred areas of knowledge aren't addressed, changing those questions
> (or perhaps the testing itself) would be an outstanding subject to be
> discussed here. However, it's not usually discussed because all
> threads lead to the code thing.
>

So? Go find somewhere else to join in. Because if your motivation is to change the cycles that happen here; you may as well give up. Right now, the vociferous CW threads and the thread about my callsign? They happen every time at this time of year. Larry usually brings up the "extinction" debate shortly before the holidays and it ends sometime around Feb-Mar. Hans is returning to the newsgroup after a season of fishing; so you'll see more frequent posts from Brian Kelley (haven't figured that one out yet) and more frequent posts on other topics such as kit building, antenna efficiency, ARRL--good and bad, and all kinds of other subjects. Then, when everyone who has a life in the Spring and Summer months mostly disappears from the newsgroup, you'll see the people here who are always here--and you'll see that those people are mostly those who just plain don't like each other and snipe at all times of year. I've come to enjoy it and have decided to use the newsgroup as training ground for communication methodologies that I use in my employment. Works great--except when I allow myself to go off on some childish throe of insults and derivation into la-la land which, for me, is a great distraction! I have to be pretty darned "professional" during the day and getting down to another level sure is great fun!

> I have my own view on the code issue and it's not going to change
> anymore than anyone else is going to change theirs. Our minds are
> made up. However, I think that people on both sides of that
> particular issue see areas where they would agree that the actual
> testing needs change.
>

And that debate has been had and made many times here; and it's coming up again--Winter is coming.

Nope, I don't. But for goodness sake, don't apologize. Good grief. You've nothing to be apologetic about--'least not the way I see it.

And, for goodness sake again--don't *even* be affected by anything Dick Carroll, Waddles (WA8ULX or whatever), Larry Roll or even Dave Heil says. They're humorous, at best. They all remind me of drunken old rambling men.

This newsgroup is not the place to find intellectual, even-handed debate,
Bob. You're way off base with your concept if you think it is. It just
isn't. QRZ, eHam.net, or others maybe, but not this one...

And, lose the idea that the CW thing is going to die--it's not. If you are
that serious about wanting to change the wheel, then get involved heavily in

the ARRL and W5YI. Use those venues to affect change; but you'd better be willing to take giant baby steps at a time--and I don't think you're that serious. That's not an insult--few people have the fortitude, time, and stamina it takes to turn a wheel. I tried for four years--and most of my free time. Didn't work. Giant baby steps=hugely small steps at a time.

Sigh. How 'bout this: ever consider that a lot of CBers did, indeed, hear of the new requirements (lower CW testing standards) and decide to get into ham radio for....guess what: FM!!!!!???? When I was "into" CB radio, I was barely ever on AM. There's a whole "other" gang of participants out there on CB--and the mentors of that group are mostly hams. The USB/LSB and, alas, FM--yes, illegal but done--part of CB is an area where you'll find people who are courteous, have "gentlemen's" rules that are followed; where people experiment with antenna design and construction; where an "eyeball" meeting is just as likely; etc.

When I was drawn to and got my ticket, you know what the greatest relief was? Being able to turn a radio on and not hear all that hissing, heterodyning, etc.!!! FM is great and that is what I like most about ham radio. HF sucks for all the noise. So, no need/interest to upgrade. And, everyone else was as relieved and impressed with FM also. Listening to HF brings back those days when we had to deal with all that noise. And, it's not a pretty memory.

You raise an interesting point Charles. To test the thesis, it would be nice to have a comparison with the numbers of General and above licensees from the same period.

With the Technician license being so easy to get, many will take the test to become a tech as a passing whiiim or fancy. By the time their license is up for renewal, they are on to something else.

There are a couple thoughts here.

"Who cares about the retention rate? It's a free country."

Well, how would you like to be a VE, giving up your time and effort on weekends, only to have almost all that work be fro naught? I would not want to do this task unless I thought that most of the students were going to continue.

"We gotta have those numbers".

Your post points out the not-so-subtle difference between quality and quantity. I'll take a good dedicated ham any day over someone who just gets their license on a lark.

I just discovered this post, Hans. You have a better capability of understanding than what is demonstrated above. I do not, and never have forsaked CW communication. Perhaps you can give me an idea as to how I caused you to think that?

And, please don't get confused with the *testing* requirement, which I don't like; and that I don't like using it. Just because someone doesn't see its merit as a testing element and just because I don't use the mode, does not mean I don't believe in its value. Every area where I have had any influence in emergency communication has always included a venue for *any* form of radio communication, CW included; ATV included; etc.

One will get ya ten that Farnsworth was an expert on the subject
BEFORE he/she invented that wheel and took it public. I find the
concept of you, admittedly struggling to get off a notch above ground
zero in this game, "facilitating" the learning process for others just
a tad problematic.

Local terrain isn't much an HF stopper so W1AW would be be usable
under normal condx. But per your response to Dick your overriding
problem seems to be noise. Are you on Jones St. in Martinez or in
Walnut Creek? In either case noise in those kinds of very densely
populated QTHs can be mongo. I can sympathize with all of that, I sure
have my share here. So W1AW is a non-solution. But you might try
shutting down all six computers and listen again.

> Brian> . . Been there, done it and it WORKS. The mix of 1AW and The

Copying random five-letter groups is excellent code practice which is why the military has used groups instead of straight text for CW training purposes. Five letter groups at 20wpm is more difficult to copy than is staright text at 20wpm, another factoid which is as old as the hills.

> Other than that, though, I'm
> pretty happy with what I've got.

If it works for you it works.

> Brian> And CW contests are lousy code practice.
>
> I agree with you on this. Hopefully by next Field Day I'll be able to
> participate with CW,

I suggest you get on the air somewhere somehow by hook or crook and get some real experience before you dive into FD. Per previous I have a nasty noise problem too but I now have a nice quiet alternative "escape QTH". I have some lines permanently installed in some big trees in one of my daughters' back yards and pre-fabbed quick-up dipoles for 80/40/20/15. I also have a TS-50 HF mobile xcvr with the CW filter and an FT-847 with an Inrad 400 Hz filter both of which are very compact lightweight portable rigs. Once I get to her place I can be on the air in 15 minutes. Which I do when I just can't stand being off HF any longer. I beep my buns off for hours, get my fill, do some visiting, mooch a dinner and come home in a much better mood than I had the day before. Sorta like FD once a month. Poke around, maybe you have an alternative operating site too.

> but I am concerned that my straight-key efforts
> will be wasted on the memory keyers out there. Bah.

Using a straight key in a contest would kill me if I was running a decent rate. The goofy relics should be outlawed at least in contests except under unusual circumstances. Do yourself a big favor and get yourself decent paddles like a Kent and a cheap MFJ keyer and take it from there. The paddles would work fine with the FD momory keyers. Beyond that real CW contesters don't use any types of mechanical keys, they use keyboards. In the end the means used to generate the output doesn't matter, it's the ears that *always* matter . . .

That is of course true but at least knowing the basic formula gives the new
ham a place to start even though there are additional factors that should be
considered.

As above, at least the new ham has a place to start. With the "just memorize the specific answer" approach, he/she has no place to begin.

Bullshit is in the eyes of the beholder Hans, your bullshit is not necessarily global bullshit by any means. I don't agree with some of his post but then again some of it is absolute fact the way I see it. Particularly as it relates to what appears to be the low value the early nocodes placed on their ham tickets vs the renewal rates of coded licensees. Life beyond ham radio has huge volumes of other examples of how little folks value giveaways. N5PV ain't out here by himself on this one, far from it.

This is sheer speculation but I would guess that the reason the retention rate is so low is that a lot of the no-code tech licenses were the result of the licensed ham in the family urging family members to get a license so they could stay in touch via 2m as they bog around town since they didn't have to convince the family members to take code. Ten years later, it's a whole different world. There are cheap cell phones that fulfill this need nicely. For use out camping, there are cheap FRS radios. To keep in touch with someone in the next town, there are internet chat capabilities.

In a sense, we have come full circle back to where we will only be able to get and keep those who develop an interest in the radio hobby itself rather than using it for personal communications among family members who are otherwise not interested in radio.

Don't need to send it poorly. Only strong code signals under good
propagation conditions can be adequatly copied by the computer anyway. I'm
only mediocre at the code myself but I routinely copy better than the
computer anytime conditions are less than ideal such as with weak signals,
poor propagation, high static, or high interference.

Yeah if you are out to win or be a high scorer, you are correct. However if you just want to be a casual contester, a straight key is fine. Also if you are doing the "hunt and pounce" instead of "camping on a frequency," it doesn't make quite as much difference. I like to get out there in a contest and just see what the variety is. I don't intend to make any run at a large number of contacts. The last CW contest I was in, I was quite happy to make 77 contacts and then go do something else.

Hans, you need to turn off the computer and listen to your radio a
little bit. charlesb is right.

Brian> sympathize with all of that, I sure have my share here. So W1AW
Brian> is a non-solution. But you might try shutting down all six
Brian> computers and listen again.

I have scheduled a network outage tomorrow for this purpose, and I'm
also planning on pulling the plugs on all major appliances for an hour
or so as well if that doesn't work.

[...]

Brian> Copying random five-letter groups is excellent code practice
Brian> which is why the military has used groups instead of straight
Brian> text for CW training purposes. Five letter groups at 20wpm is
Brian> more difficult to copy than is staright text at 20wpm, another
Brian> factoid which is as old as the hills.

The only problem I have with five-letter groups is that I'd like to
start recognizing words, not letters, if at all possible, and
five-letter groups aren't really conducive to that.

Jack> Other than that, though, I'm pretty happy with what I've got.

Brian> If it works for you it works.

Brian> And CW contests are lousy code practice.

Jack> I agree with you on this. Hopefully by next Field Day I'll be
Jack> able to participate with CW,

Brian> I suggest you get on the air somewhere somehow by hook or crook
Brian> and get some real experience before you dive into FD.

Please do not misunderstand. I have absolutely no intention to have Field Day be my first major CW experience. That's as silly as soloing into Oshkosh, or any combination of "my first major experience in foo" with "a huge event centered around foo". My contest mind-set is "play to have fun, not to win".

Brian> Poke around, maybe you have an alternative operating site too.

I actually have an alternative site where I can string up a 122ft dipole, but it's only six feet off the ground. It does have much better reception than what I have at home, though, and I'm eager to find out how well it performs. However, the alternate site is my mother-in-law's front yard, so I can only use it when she's out of town.

Jack> but I am concerned that my straight-key efforts will be wasted
Jack> on the memory keyers out there. Bah.

Brian> Using a straight key in a contest would kill me if I was
Brian> running a decent rate.

As mentioned above, my goal in contesting is to make as many contacts as I can while still having fun.

Brian> The goofy relics should be outlawed at least in contests except
Brian> under unusual circumstances. Do yourself a big favor and get
Brian> yourself decent paddles like a Kent and a cheap MFJ keyer and
Brian> take it from there.

I built a Ramsey keyer. It didn't work with my Kenwood rig. So I built another and it didn't work either. Turns out that the keyer's method of closing the contacts doesn't work with my particular rig.

Brian> The paddles would work fine with the FD momory keyers. Beyond
Brian> that real CW contesters don't use any types of mechanical keys,
Brian> they use keyboards. In the end the means used to generate the
Brian> output doesn't matter, it's the ears that *always* matter . . .

Which was the original topic, of course.

Jack.

Kim, Hans was pointing out the large (apparent) numbers of *codeless* techs not renewing their licenses. My guess is that close to 100% of their operation (if, indeed, they did operate) was on FM. As far as the noise on HF, that may be one reason I never cared for contests. I spent time on 40 during the day and 160 in the evening. For the distance, I simply preferred CW. Back in the pre-DSP days, a 250 Hz filter did wonders. Noise? Non-existent.

In article <bjct9j$q01@library2.airnews.net>, "Kim " <kimscliff@yahoo.com> writes:

>FM!!!!!????

(snipped for brevity)

That's one reason, Kim, stated in a way that makes a lot of sense.

Here's another:

Even before 1991, a considerable number of hams in this area (metro Philly) were friends and family members of hams who wanted a way to keep in touch while mobile. The most common setup was the 2-careers/kids/cars household, where the radio was used for all sorts of "honeydew" purposes.

This sort of thing was particularly popular on some machines around here because the culture in this area encourages open machines, deference to mobiles and HTs, and wide coverage. Plus there are so many open machines around here that you can usally find one that's not in use.

What really drove that boom was not the dropping of the code test but the availability of inexpensive, small, easy-to-use HTs and mobile rigs. And the proliferation of repeaters,

These folks were hams, all right, but their interest in ham radio was not about radio as an end in itself, but radio as a means to an end. IOW, just a tool to do a job, not the main attraction.

Trouble is, cell phones now fill those roles.

>2.3%.

That rate is so low that the methodology needs examining. IOW, how did the
"couple of guys" determine their data?

How did they examine the data for every one of those 1,925 licenses? How did
they deal with name changes, address changes, and the vanity callsign rule
changes?

I'm not saying they were dumb or had an ulterior moive, just that their data
analysis methods need to be examined.

Did they check any other license classes?

I am certain beyond a doubt whatsoever, no one hammie or upperclassmen for that matter would give a rats azz if barefoot DXers employ the unused and abandoned 11 meter frequencies above 40. Yet,,,,,there exists a certain core of pedophialic lid-types that construe a slight overlooking of minor rules as capitol crime. As prime example Frankie,,Davie Hall, WA3MOJ, KC8LDO,Hypocrite N3CJCV,,,,and the remainder of lid posse infer by proxy vote and mental intrusion on my thoughts that there is NO excuse for breaking the law pertaining to the airwaves....according to Hall himself, and Frankenstien,,,to whom communication deficits abound....amends to condone this type behavior he commits in a wanton and willful act of pedophilia-like nature...hmmmm,,,but the same ego-wracked penitents have a problem with 11 meter DX and freebanding. Hyuk! Furthermore,,,this Voob-named loose kennel of lid-induced guardians of federal law-upholders proffer to make inquiries of another man's underwear, shooting cbers, and insults about molesting children. Proof is what these wet faced ARRL Lids cry for,,,,and here I proffer only the truth as evidence of my sincerity,,,,

Not the way YOU attempt to twist them Twit! Are you related to Kim by chance?

Let's go through your drippings one at a time here and take a close look...

PLEASE try to see if you can pay attention, OK????

> I closed down my VE team in early '94

So you're not a VE?

Yes Mr Smooth, I still have my credentials all in place. If I wanted to VE tomorrow, all I have to do is show
up and do it.

>Sheesh! Try to separate your contradictory statements by at least a
>few sentences so that people won't get the idea that you're lying
>about something.

What ARE you running on about now??? Is your diahrea of the mouth recurring yet again?

>> after we licensed so many other hams who started up their own teans in the region that we had very little>
business remaining.

>Ah, so you were put out of business by the competition. You've never
revealed this before.

Read it again Village Imbecile, and this time for effect--- WE LICENSED SO MANY HAMS IN THE REGION THAT THEY
STARTED UP MANY OTHER TEAMS. THOSE TEAMS TOOK UP THE SLACK, AND WE FOUND SO FEW TRAVELLING THE DISTANCE TO OUR
SESSIONS THAT WE EVENTUALLY REALIZED WE REALLY DIDN'T NEED TO HOLD THEM SINCE THE OTHER TEAMS WERE FULFILLING
THE NEED.

Got it, or should I send a hammer and chisel for your poor XYL to try to drill it into your granite skull?

> At the outset we had the only team in a hundred mile radius.

No doubt you were the Big Man at that time.

The ONLY team. Does that make it into your germanium cranium?

I *did* remark after the last
> restructuring that I didn't ntend to participate as a VE after that debacle.

Yes, you DID, DICK.

Vindication at last, and by your own post. No need to Google up
anything - your own arrogance will hang you.

Vindication? It's been in google since, over three years now. That decision was about dumping the Extra class
to nothing. It was just too much to expect. Of course that make NO sense to the senseless, like yourse.f

But you said more than "I didn't ntend [sic} to participate."

You said that you were disgusted by the NO-Code Technicians that were
testing. They weren't worth your efforts.

That might be trun in YOUR case, you lying sack, but then you and reality have never occupied the same space
anyway. If I was so disgusted by no code technicians why would I have licensed so many of them into ham radio?
Curses, foiled again! Say when do you plan to ask for permission?

So far I haven't, and haven't
> needed to.

Wunnerful. Maybe the new VE's don't make their clients feel unworthy.

Clients who feel unworthy probably are. It come with the territory for some people. Some of they just can't
understnd that it requires effort to overcome it sometimes.
We see you're one of them.

> Get your facts straignt and MAYBE you won't be so prone to spread falsehoods.

Hey, I have only used your own words, DICK. Are they not facts?

Your interpretation of them never was. But you already know that. Lying is chronic to you.

Actually I don't believe there's much that can be done. Ham radio will never be competition for the cellphone, which was not nearly so ubiquitous twelve years ago.

What that data proves is that when you make entry into ham radio easy enough there will be lots of people who will get licensed on so mild an interest that it soon evaporates in favor of the Next New Thing that comes along.

Dee, I once made the comment that anyone could send code so poorly that a computer couln't copy it while a human still could. Brainless Brian has contorted and totally distorted that into so many versions that even he can't keep track of them all.

Dick

Sans the profanity, I agree with your assessment on this part of
Charles' comments, Hans, but he's quite correct in another...We went
to all this trouble...For what?

I also agree with his assertion that we need a better quality
Amateur Radio...Not necessarilly more numbers.

The "more numbers" aspect certainly seems to support (and I once
agreed with) the concept that "there's strength in numbers". But
since these licensees ar non-contributing anyway, of what use is it to
"recruit" people who won't stick it out and be of some use?

I certainly take every opportunity to "show off" Amateur Radio to
anyone who's interested, however not everyone wouild make a "good
Ham".

Granted, not everyone is going to be a Maxim, Clark or DeMaw, but
then they don't have to be.

It's worth a thought.

DICK cranium, you've got the attributions all screwed up, you reposted
my stuff about 3 times, and you still lack the brains that God gave
most humans. Which is no surprise.

But go ahead an read my comments to you stream of bile and lies.

> What ARE you running on about now??? Is your diahrea of the mouth recurring yet again?

So you are a VE, but you don't VE. You closed down YOUR team in early
94 only after the restructured Extra which was too much for you to
take???

Forked-tongue! See your lie way below

1994 was after the advent of the No-Code Technician, not the
restructured Extra.

Problem with guys like you is you can't keep your lies straight even
within the same post.

> >> after we licensed so many other hams who started up their own teans in the region that we had very little>

>
> Vindication? It's been in google since, over three years now. That decision was about dumping the Extra class
> to nothing.

No, no, no, no, no!

You quit VEing looooong before the restructuring. Way more than 3
years ago.

Why must you lie about it?

> It was just too much to expect. Of course that make NO sense to the senseless, like yourse.f
>
> But you said more than "I didn't ntend [sic} to participate."
>

> You said that you were disgusted by the NO-Code Technicians that were
> testing. They weren't worth your efforts.
>
> That might be trun in YOUR case, you lying sack,

Couldn't have been. I never was a No-Code Technician no matter how
badly you wanted me to be. You have to hang your hatred of me on
something else. Probably because I catch you in so many lies.

but then you and reality have never occupied the same space
> anyway. If I was so disgusted by no code technicians why would I have licensed so many of
them into ham radio?

You lack logic.

> Curses, foiled again! Say when do you plan to ask for permission?

Dream on.

> So far I haven't, and haven't
> > needed to.
>
> Wunnerful. Maybe the new VE's don't make their clients feel unworthy.
>
> Clients who feel unworthy probably are.

Specially when you're spitting bile on them.

It come with the territory for some people. Some of they just can't
> understnd that it requires effort to overcome it sometimes.
> We see you're one of them.

Yep, you've spit bile on me.

> > Get your facts straignt and MAYBE you won't be so prone to spread falsehoods.
>
> Hey, I have only used your own words, DICK. Are they not facts?
>
> Your interpretation of them never was. But you already know that. Lying is chronic to
you.

The trouble with guys like you is you're not bright enough to keep
your lies straight. If you could, no one would know you were lying.
But today you've proved it beyond any shadow of a doubt.

It's too little, too late Hans.

Years of keeping the CW requirement and
the advent of the Internet as a cheap alternative
to Amateur Radio spelled the end of Amateur
Radio for those who could see the writing on
the wall a VERY long time ago.

Add to that a median-age of 67 Yrs for the US Amateur population does not help
either - we are LITERALLY
dying off.

Finally the outrageous cost of ham gear (HF gear)
is enough to scare off any prospective newcommer.
Who in their right mind wants to spend $2000+
for a Yaesu HF station when for about $400 you can
buy a fully equipped "white box" PC with a 56K
and DSL modem, and be able to interact worldwide
without the use of unsightly dipoles and tri-band beam
antennas...?

Hans, Amateur Radio is **OBSOLETE**.
It's popularity is enjoyed by an extremely small
esoteric sector of the populace, and the general
public looks at us as a curiosity at best.

That is the bottom line .

Kim, go back and read the part about how he only stopped VEing in 94
AFTER the restructured Extra came about.

Hihi.

He stopped in 1994 because he hates No-Code Technicians. The
restructured Extra came much, much later.

What's this pea-brain been smoking?

Another ham-bashing Troll.

Assuming that he means what he says, the guy must be an utter moron... One of those who thinks that ham radio and the Internet "compete" with each other, as if they were rival communications carriers going after the same market... What a dope!

> Don't need to send it poorly.

Does anyone have a need to send it poorly (except DICK)?

More importantly, you shouldn't try to send it poorly. You should
send it to the very best of your ability.

But if you send it very poorly with the intention of thwarting machine
copy, what do you think the result will be?

Only strong code signals under good
> propagation conditions can be adequatly copied by the computer anyway. I'm

Jim,

We might also check the Social Security Death index .. :)
I check it daily. If my name isn't in there, it's gonna be a good day :))

Charles,

Don't worry about it. W3 something? We had a guy in a Yahoo group claiming he had built computers whilst most of the folks were still in diapers. He signed an amateur callsign. Hmmm ... a quick check of qrz.com revealed that callsign was *unassigned*. Hmmm .. kinda makes you wonder about the "message", doesn't it :)

You and Jim (Hampton) mentioned this and I had completely forgot about that aspect! And, it was also one of the reasons I so easily got my husband interested--as soon as I began mentioning how neat it would be to stay in touch better than with a mobile phone--which back then was cost prohibitive.

Absolutely. Probably one of the biggest reasons we (my dear and I) haven't
been all that driven/motivated to get the equipment back into the vehicles.

Nonsense. The FCC specified Morse at 5wpm rate. Farnsworth is a
method for learning fast Morse code, thus the characters are sent at
13-15wpm.

Amateur radio and electronics includes many methods of learning, but I
doubt the FCC would allow the answer to the resistor color code to be:
"BAD BOYS RAPE OUR YOUNG GIRLS BUT VIOLET GIVES WILLINGLY," yet it is
a commonly used learning technique.

Jim has repeatedly pointed out where the ARRL proposed fewer license
classes and a lower code speed for full priveleges during the last
restructuring, which he always equates with lower standards.

Just my personal preference. As I said in another place, I spent too
much time doing useless stuff for a regulatory agency while getting
paid for it. I don't want to do it for free. My life...my choice.

No that I think that either one will have an impact on the final
decision, but I'd have to say a combination of both would be most
effective.

Kim, within a year the only debate in here about CW will be about the
consequences of it no longer being required. The whining will be
terrible for awhile, but like the no-code tech discussions, they will
eventually disappear.

However, you are right about one thing. This is not the place to look
without heavy filtering of those who are incapable of logical
discussion. I think I'll hang around for a while just to watch the
endgame.

Anyone who can read the news knows which way code testing is going to
go. The only real question is when. I see that Oz has decided that
they don't have to wait until 2005 to dump it. Gee...what a suprise.

Oh, I come and go. I have many more parts to my life that are more
pressing sometimes than ham radio or the newsgroup, but I won't go
into them. It sounds like the serious hams who want to discuss real
ham things have lives too.

BTW, the last time that I read anything is this ng was when you posted
your goodbye to the group way back when. You see, this is a newsgroup
that you can leave for months or years and come back exactly where you
left off because the same things are being said over and over again.

Personally, I kinda like your callsign. I hope that you can live up
to it.
>

So, basically you're saying that the ng is stuck and useless except
for a distraction. That's a shame, but I tend to agree with you.
Still though, I think that if a few hams wanted to discuss stuff that
is actually policy related with regards to enforcement, policy, etc.
it could become a useful group with a lot of filtering.

All petty excuses. Anyway, speaking of trucks, mine was almost stolen last night. I was up late and just happened to look out the door as a guy approached the truck. I watched him as he looked in the window for several seconds and then raised a rock over his head to break the glass. At that point, I shouted for him to get away from the truck. He then ran to a waiting pickup where his friend sped off. Sadly, the tailgate was down on the pickup, so I couldn't see the license plate. Since there has been a string of vehicle thefts around here lately, I called the police and gave them the best description of the vehicle I could. Of course, by the time they got here, the guys were long gone.

That is funny. Years ago (at a retirement community), the boss suggested I tell everyone my antennas were for television. Sure enough, two days after the largest antenna went up (18 foot wide and 20 foot boom), a female neighbor asked about it. When I told her it was for television, she looked at it, paused for several seconds (obviously thinking), and seriously said I must get really great reception. I almost died laughing (as did the boss when I told him about it). That was my most humorious antenna situation.

Oh man.... Well, I've thought about how I would "handle" the robbery of my
truck--it literally took me a lifetime of dreaming to get one; and I really
never thought I would be able to do it. BUT, if it was stolen I would hope
it was totally destroyed beyond being able to be returned and then I would
hope that the extra coverage I am carrying on it would hook me back up.
Kind of like when the house caught on fire...man the insurance company was
10X worse than the damned fire! I'm scared to death of fire again for fear
of what I'll have to go through with the insurance company!!

I told my neighbor that if he ever gets over here with a garden hose to put
the thing out again, I'll choke him. First he took serious risks standing
at an outside window that had blown, not to mention that the "smoke"
(actually fumes as you know) had reached that greenish-yellow phase, where
they can flash-fire at any point and he was standing right in the middle of

it as it war barreling out the window!! He just doesn't realize what could have happened to him...and nothing in my home is worth the life of anyone, nothing.

Dick, you biggest problem is that you're lazy. You left it up to someone else (me) to keep track of your lies instead of doing it yourself. So don't blame me for you shortcomings. You should have been taking care of business.

And as far as staying gone goes, you're welcome to stay gone just as long as your mean, bile filled heart desires.

Kim, Len, Brock and me aren't going anywhere.

Sayonara, Brian

Bob. You're young, aren't you? I can almost tell that by your optimistic
attitude about the CW issue. You have to realize, Bob, that the CW issue
for the drunken-type ramblers is not a CW issue at all. It's a value
issue--that they value some mysterious talent they see in their ability and
desire to use CW. It isn't about regulations, it isn't about the FCC, it
isn't about whether it is a testing element or not. In their eyes, they
will always be above anyone else not of their ilk. We know that's wrong.
Others who have far more logic and brains and the capacity to think straight
know that's wrong. But, they do not. So, their incessant whining and
arguing and condemning and blaming will go on into eternity, while the rest
of ham radio--the real part--moves on, has fun, helps out, and grows.

>

Absolutely. The only reason I happened upon the newsgroup again is I've been designing and building an MS Access application for use by a company. I am on the computer so much at work that it really isn't a draw here at home. When I was on before, we'd actually just gotten the internet connection, and a second computer so we didn't have to "share" :GRIN: and I would load up the newsgroup while I was cruising around. For this project that I did here, we went out and bought a new computer with Office XP Pro, Office Pro, TurboCAD, Dreamweaver, and Crystal Reports. This MS Access application turned into an all-out total package for the company and it's challenged some of my abilities--which I really dig because it's meant growing some new knowledge and that's never bad!

At any rate, the project is now winding down, save some tweaks and mods. I don't know if I'll keep coming to the newsgroup. I don't have much to do on the computer at home; I'm much more an outside or home decorating person than I am a internet junkie (hubby's the internet junkie). And, heck--now we're looking at new homes so that's bound to keep me distracted. But, like I said, after the shock that there are people who act the way they do here in this newsgroup, it becomes nothing but fun and entertainment to draw them out--well, except for DICK who can't directly respond to anyone who's smarter than he--into a tirade of emotion. The occasional half-serious-to-serious discussion is great.

Oh yeah. You got that right. For those folks whom you depict above, all one need do is imagine the local bar-and-grill/pub, where Johnny and Drake and Chuck have hung forever. One walks in, could be 15 years later, and there they are: still on the same stool, slumped over, arguing the same damned things they've argued for years. Pathetic, I know, but it's no different than watching a car race, not for the winner but to see what accidents we can see.

>
> Personally, I kinda like your callsign. I hope that you can live up

> >
> >Kim W5TIT
>
> So, basically you're saying that the ng is stuck and useless except
> for a distraction.
>

Absolutely. The only folks you'll ever see in any half-way decent debates in this newsgroup are Jim/N2EY; Brian Kelley; Hans--once in a while; and the occasional visitors who'll bring up something happenstance into this newsgroup and figure out real quick that there's so few serious participants that it's just not worth it.

>
> That's a shame, but I tend to agree with you.
>

Oh, I don't think it's a shame...'least not any more. I kinda like it. I don't know where you work or what have to do for a living but I get plenty of serious, mentally challenging, stressful distractions at work. I think the transition I used to look for here was a seriuos-but-not-mentally-challenging exchange. Well, that's not going to happen ;) so I just shed all the "stuff" and decide to be as basal as I can possibly be--unless there's something that I can contribute to an intellectual discussion. And, let's face it, I'm just not into ham radio for the intellectualism of it so most of those discussions go way up over my head and I am bored to tears with the idea of learning enough about whatever is that's being discussed...!! Reading those discussions is like just looking at the cover of that mag that ARRL puts out--the Techie one.

>
> Still though, I think that if a few hams wanted to discuss stuff that
> is actually policy related with regards to enforcement, policy, etc.
> it could become a useful group with a lot of filtering.

That possibility is insidiously redundant, i.e., can happen anywhere. There's nothing stopping you from doing that right here--a new thread--and completely ignoring the posts to it that have nothing to do with the topic and everything to do with one's being on top of their imaginative mountain. You could also start it--well, anywhere.

Jack, "students teaching students" is at the core of the FCC's
mandated Novice subbands. I hadn't been aware that Kelly was against
this concept and the implementation of it.

I feel he makes an interesting conjecture Charles.

Consider: If one were to set up two PC's with full
internet capability & CD-ROM burners, and six
feet away, two HFham stations with control op's
at a hamfest.

Next you invite 10 young people (14-17 yo) at random who have
no previous exposure to ham radio from the crowd to
choose which items to explore and operate.
Which of these two setup's do you think that
in the end-game, the greater percentage of
young people would choose to bring home if they
had the option to do so?

(My guess is they'll want to download MP3's
from Kazaa or Morpheus instead of calling
CQ on 10 Meters thru a microphone)

'zactly. And it's not a new idea, either - back when long distance phone calls
were prohibitively expensive for most people, there were *some* hams whose main
interest was keeping in touch with family members who were all over the country
- or world.

>> This sort of thing was particularly popular on some machines around here

>I concede, now looking at it that way.

Nothing to concede, Kim. Your "FM" story is one source of new hams. My "honeydew" story is another. I don't think any trends in amateur radio have a single source/reason.

>> These folks were hams, all right, but their interest in ham radio was not

>> 73 de Jim, N2EY
>
>Absolutely. Probably one of the biggest reasons we (my dear and I) haven't
>been all that driven/motivated to get the equipment back into the vehicles.

Exactly. On the one hand, almost everyone sees a cell phone as a "necessity" these days, and the calling plans and good (not great, but good) coverage make them the comm tool of choice 99% of the time. Plus, "installation" consists of putting the charge cord in the cigarette lighter socket.

Putting your ham gear in the truck is a whole different story unless you want to do the lighter socket/magmount thing.

73 de Jim, N2EY

- If you can find any teenagers who are not already familiar with that
stuff... Maybe you could find a few in an economically depressed area, might
be worth a try.

Most teenagers I know are already up to speed on the Internet stuff. It's
old hat to them, the kind of stuff they see anywhere and everywhere,
including at school and home.

My guess is that they would show more interest in the ham gear, because at
least it would be something new, that does something different.

Also, a surprising number of teenagers today are seriously interested in public service. They want to do something good. For these teens, ham radio has endless potential and yes it most definitely does excite their interest.

So you can take your "The Internet is more interesting that Ham Radio" attitude, fold it up so that it is all sharp corners, and... Well, I'm sure you figure out something to do with it then.

The only point that anti-ham troll has, Rich, is the one on top of his head.

Charles Brabham, N5PVL

I won't argue with your basic premise, Rich. You are absolutely right.

And if a similar number of adults were chosen, a whole lot of them might get excited at how much porn they could download.

But I don't see that as a good comparison. For most people, computers are a hobby, but not a technical one. Most computers today are sold bundled with pre-setup hardware and software, and all you do is plug them in, get an isp, and off ya go.

Most of these people would not be interested in the amateur radio station even if there were no computer in the same room. They just don't

have the technical interest. You just keep plugging away to catch that 1 in 10 or 100 people that will be interested in the ARS.

If I were to hazard a guess, I wouldn't be surprised if the low retention rate was due to the number of non-technical people who got their technician license, and then had no real interest and therefore no reason to renew their ticket, as they probably hadn't been on the air since soon after they got their license, or as soon as there was general cell phone coverage.

It was pretty pathetic, Kim. They suckered poor Cecil into meeting up
with them on 40M CW, but treated him just as badly afterward. I would
advise you not to fall for their tricks.

Anyway, Brian, did you see a couple of
> months ago where I posted the question to Dick about just what it would take
> for the establishment of a disaster station for CW operation? As far as I
> know, he never answered!!!!

Yeh, I never saw his reply. I guess if you shake a guy up bad enough,
he starts blurting out all kinds of stuph, like DICK just did..

And, of course, it's because he knew he was
> getting set up--we all know it would actually take quite a bit to be ready
> to establish a disaster response CW station--and that was the set up. I was
> going to ask DICK if he was ready...
>
> Well.....

To hear them talk, you can make an emergency CW station out of a
Wrigley's Spearmint Gum foil wrapper and an old double edge razor
blade.

They lie.

> > Oh, I almost forgot- you're STILL waiting for a code free license!
> Right!
> >

If DICK could use QRZ, he might discern that I've always held a coded
license, but he chooses to remain ignorant.

"Show Me" has no meaning to him.

Buice is always asking silly questions.

For instance, a few years ago Bruce came on here asking if a CBer
married a No-Code Technician, would she still be his sister?

Bruce talks like a CBer, and he used to live near Akron at that time.
There is a female Technician with the same last name in the database
in that area.

So I wonder if he's made an honest woman out of her yet or if he's
just dating her.

So you still want the Amateur Radio Service to be the exclusive domain
of the Electrical Engineer's?

I don't think that's what the FCC wants, but since the NCVEC can do
any damned thing they want, go ahead and put it to them.

I am not an EE or, for that matter, an any-type-E. Majored in History, in fact, with a useful minor in Comparative Religion. Work experience consisted on sitting in an office, drinking bad coffee, attending boring meetings and writing REALLY useful memos (I was high enough in the organization so that I didn't have to read any memos). With that as background ...

I do no think I am brilliant, but I have not found Smith Charts all that difficult. When I learned about them, I found them interesting and potentially useful. Perhaps, just perhaps, the NCVEC thinks selecting for people who find such things a Smith Charts interesting is a reasonable filter for entrance to ham radio. If this be true, perhaps, just perhaps, that's a reasonable filter?

I think it's better as a separate petition.
>
>If FCC grants the "no Morse test" petition, then it is unlikely to roll
>back that decision at a later date.

Which is why a separate petition is a better idea.

The most likely scenario now is that FCC will continue to receive petitions, assign them RM numbers, and take comments. Doing so takes almost no FCC resources and allows lots of time for ideas to percolate through the process. Perhaps FCC hopes some sort of consensus will be forthcoming.

There are also a couple of petitions from as far back as 2001 or so that are still hanging fire. For example, FCC has not ruled on the ARRL petition to "refarm" the Novice bands.

At some point, the flurry of petitions will slow down, comments taper off, and FC can do one of two things:

1) Create an NPRM (most likely)

2) Change the rules without an NPRM.

I think a lot depends on whether a clear consnesus surfaces from the comments.

Nope. One does not have to be an EE in order to understand, and use, the Smith Chart. Many hams who are not EEs have Smithc Chart knowledge and skill. Many EEs do not.

btw, the plural of "Electrical Engineer" is "Electrical Engineers" not "Electrical Engineer's". "Electrical Engineer's" is the possessive

>I don't think that's what the FCC wants, but since the NCVEC can do
>any damned thing they want, go ahead and put it to them.

NCVEC could not create a separate Smith Chart test without FCC approval. And they could not deviate from multiple-choice format.

It's obvious that irony is not one of your strong points, Brian.

Consider: It's 1955 and you set up the 2 ham stations above and 6 feet away
you set up some baseballs, bat's, and gloves.

Next you invite 10 young people (14-17 yo) at random who have
no previous exposure to ham radio from the crowd to
choose which items to explore and operate.
Which of these two setup's do you think that
in the end-game, the greater percentage of
young people would choose to bring home if they
had the option to do so?

Amateur radio is not now or ever has been for "normal" people. It's for the
techie's, geeks and nerds. Where do the young techie's, geeks and nerds
look for information? The Internet. What kind of information will they
find? Almost nothing but bitching.

Really, in all my hobbies that I check out on the net I have never see such
a nasty bunch of adults acting like 8 year olds. I know it's a vocal
minority making the noise but it doesn't leave a good taste in my mouth.

The internet should/could be one of the best things to ever happen to
Amateur radio. And it falls on us to make it happen.

Hans, though it pains me to do so, I would suggest censuring amateurs such as DICK, Larry, Steve, Bruice, Kelly, and Jim as they continually put forth the idea that an amateur that is not versed in Morse is an incomplete amateur. Nevermind that this amateur can do PSK31 and FSTV.

Everyone knows that a picture is worth a thousand words, so if Jim can send a thousand real words (not ARRL numbergrams or Q-signals) in the space of one FSTV image, ... maybe he shouldn't be censured. Just maybe. Get back with me if he passes.

Furthermore they exhibit a throwback mentality, which just annoys me. OK, you've got your marching orders, as far as you can march on a boat. So be off with you, Master Chief.

I doubt that those who dropped out did so because of these people, this newsgroup, or the activities of hams on the air or on the internet. It's unlikely they even know about this newsgroup let alone frequent it. They are probably people who lost interest years ago due to the fact that they were not into radio as a hobby but simply to talk to spouses and children around town. As cell phones became cheap and service improved, there was no reason for these people to continue in the hobby. We probably also lost some due to lack of elmering but if they don't let us know they are out there, we can't find them to elmer. Some of those hams never got even a 2m handheld let alone another radio. They never followed up by joining a club to get more exposure to ham radio and elmering in ham radio.

Maybe if they all use 1/4 wave DIPOLEs, they will be hard to hear. So it
won't matter.

Exactly, better yet tell them to use an 1/8 Wave Ant, they will not know the
difference.

Brian,

If (just if) you are referring to me, my comment was the cw had virtually no interference and I enjoyed it. I have not been in favor of keeping the cw requirements; I would, however, like to see some exams that might:
1) be slightly (not severely) more difficult.
2) not have the questions and answers published.

PSK31 is one mode that seems to have quite a bit going for it. Personally, I like the idea of any mode (ascii, amtor, rtty, psk, packet) that does not require the intervention of a human to keep the information as close to 100% accurate as possible. A good cw operator would likely be close, voice is more suspect (especially of transcribing difficult names/addresses), but any mode which can keep the human out of it is likely (at least in my opinion) more valuable for certain traffic. Of course, sstv may be invaluable in other areas. No one mode is 'ideal' for all situations.

I could, of course, ask you to send just one frame of fast-scan tv via moonbounce - but, as noted, no one mode is ideal for all situations :)

BTW (and here it comes - I'm putting on the asbestos underwear), I did join NCI a long time ago. I simply cannot justify the necessity of cw. It has been pointed out that in the event of a electromagnetic pulse due to a nuclear blast, most, if not all, modern gear (computers included) would be toasted. Yes, perhaps the tube stuff would survive, but I suspect that would be the least of anyone's problems if they were in the area affected by the emp. Most likely they would not be incoming missiles, they'd be planted somewhere by terrorists and if you were to experience emp, you'd likely be toast seconds later by the blast and nuclear radiation anyways.

My short form response is that after I graduated from engineering
school I went on to teach undergrad courses in math, physics and
applied mechanics. So I ain't exactly new to topics like how to study
and assisting other students Jack. What I did not do was try to
reinvent tried and proven study methods when I was a freshman huddled
with my buddies studying often into the wee hours.

Random groups for practice are preferable to text particularly at
speeds <10 wpm because anticipating complete words before they're
completed is one of the biggest impediments to learning the code. Not
a good habit to get into early in the game *if* you have access to
groups for practice purposes. Big "if". It takes hundreds of hours
actually operating on the air >18-20 wpm dealing with real-world band
condx to become even reasonably proficient at "conversational CW".

Let's not get too dramatic. Besides, folks solo at Oshkosh all the
time. The EAA ties up the runways for only a week, student pilots
still have 51 other weeks to dump into Oshkosh.

Dunno anybody who has a Ramsey keyer but both of my MFJ keyers work
fine with every Kenwood rig I've used it with including a TS-950, a
TS-440 FD clunker, my TS-940 and TS-50 and also my Yaesu FT-847 and an
ancient hybrid FT-101.

Well, let's see...

Suppose we consider an FSTV image to be composed of 367,500 pixels (525 lines of 700 pixels each - aspect ratio 4/3, NTSC black-and-white). Suppose each pixel contains 8 bits. We'll ignore synchronization and other overhead for the time being.

Then sending one NTSC/FSTV image requires the transfer of at least 2,940,000 bits.

Of course this can be reduced by compression, but compression isn't allowed in the comparison.

Sending 1000 words in Morse requires the transfer of 50,000 bits, allowing 50 bits per word (ITU standard)

Now if we try to use OOK/AM to send those bits through a 250 Hz bandwidth, the 2,940,000 bits of the single FSTV image will take 58.8 times as long to transmit as the 50,000 bits/ 1000 words of Morse will take. Or to put it another way, 58,800 words can be sent in the time it takes to send one FSTV image.

That is, if the playing field is level.

It's self-evident that a radio amateur who has no Morse code skills is not a fully qualified radio amateur, particularly for HF/MF amateur operation. That's a plain and simple fact.

Whether that means a Morse code skills test *must* be part of the licensing process is a matter of opinion.

For better or worse I was "brought up" in that niche. I'm one of these
animals:

http://www.gofrc.org/

> However if
> you just want to be a casual contester, a straight key is fine.

I just have a silly "thing" about straight keys Dee so maybe I'm going
a bit overboard here.

I fiddled with surplus J-38s long before I got serious about actually
taking the Novice test. Every radio kid did that 'Wayback. Eventually
I got to visit an experienced dx contester (which was what I wanted to
become) who used a bug (those guys ALL used bugs) and he let me futz
with his bug "offline" so to speak. Forthwith I immediately got
irrevocably hooked on bugs vs. straight keys. Net result was that the
nite WN3YIK hit the airwaves for the first time it was with a
well-greased, polished and tuned old USN Vibroplex. I've always had a
straight key or two floating around the shack, they're kinda "core ham
objects" and maybe I've had some straight key QSOs but I don't
specifically remember any of 'em.

> to make 77 contacts and then go do something else.

100% on the button, all of it. It's all in what one wants out of a
contest and/or is willing to put into contesting. The simple fact of

the matter is that if it wasn't for the brigades of casual contesters
like you contests simply would not be worth getting into.

Jim, as you probably know, Johnny Johnston, former longtime head of the Amateur and Citizen's Division at FCC, has stated in his own comments to the NCVEC petition-which he helped to draft- that no amateur not skilled in radiotelgraphy can accurately be considerred an expert, an Extra class. So it looks like NCI is against the very concept. That should come as no surprise, though considering. After all, it's only a "hobby".

Sometimes 20 dB of attenation is a very good solution to a noise problem.

Nice trhy, Dee, but unfortunately any attempte at using reason with him is futile.
It just confuses him and -what was his word? "Irritates" him, also pi$$es him off that
poeple just can't accept his version of a Perfect Ham Radio. With no Morris code.

No, you need to tune in the negative frequency. (actually there is
negative frequency, when you
demodulate an AM signal the lower sideband ends up being in the negative
domain (below zero).
It sounds just the same as positive frequency when you listen to it.)
;-)

Well, I guess I'm an exception to the rule. I'd support exactly
something along those lines. Have them set up a very simple radio
into dummy loads and actually have a conversation.

>Maybe - but given the resistance to my idea of 5+ years ago, I doubt it.

I don't know. Although the posts to the ng haven't changed over the
years, people and positions do change. I've had a few people post
dissatisfaction with the knowledge level of the current testing and
they seem to agree that the current tests allow people to be licensed
that don't know protocols or even how to set up and operate the
equipment. Your proposal sounds like a step in the right direction.
>>
>>I'm sure that not everyone will agree with performance based testing

>
>Even if that happens, the FCC then has to be sold on the idea.

If a consensus was reached in the ham coumunity that testing was inadequate at its current level, would selling the idea to them really be that hard? Afterall, it hams who would have to bear the burden of administering the additional test requirements. I don't think that anyone wants to see people licensed to operate radios who don't know the basics of setting them up and using them within established protocols.

So, how would we go about starting a movement towards perfromance based testing? I would be willing to do what I could to help.

regarding newsgroup charters or AOL's TOS, he's incapable of adding
anything useful to a conversation.

OK...I've changed my mind about wa8... I may have to go to a plonk
with prejuduce mode for awhild. So far there seem to be less than a
dozen posters here that I would care to talk to on radio. As I said,
I've got the kid to take to school, animals to feed, and I'm in the
middle of a move, so I really don't have a lot of time to play with
twits who have nothing productive to say about radio within the
confines for the ng charter.

I've been in rougher ng's and I've found that with proper filtering,
one can usually talk to those who want to carry on sincere
conversation with proper filtering.

>after all, he's a brother (or she's a sister) who has taken the time
>to study for and pass the written test, even if he doesn't have the
>code.

Ah god...been there and done that. These were guys that were 25
year veterans of cb. They are smart asses...I tried to elmer
hem...they wouldnt listen. They get on the area 2 meter repeaters
and use their cb handles and 10 codes. Most of them are extra class
to make matters worse. They have run all the older hams off the 2
meter band here in wv and east ky. But yes like a fool I welcomed
them into my home. Went to the classes and talked about ham radio
to them. But they are still just hardcore cbers. Its not like this
everywhere in the country but there is enough of this scattered
through the country to give most of us a sign of things to come. No
ham radio will not die or come to an end because of these
types...but this is really what the code-nocode fuss is about. There's
thousands of us that have got a taste of these fools and dont want
any more of them. I dont want to be in the extra portion of any band
and hear 10-4. I dont want some idiot that just came off cb tuning
on top of me and whistling into his mic...but its happening and has
been for the last 2 years since the code was dropped to 5wpm.
Pretty soon the grand daddys of these idiots are going to come off
cb and be on hf with us. Now you can scream about elmering and
all that...but like i said i tried...and these fools are unelmerable.
When they looked at my full wave loop they laughed and said their
cb antennas would work better. One looked at my 2 element 5
band quad at 65 feet and said his moonraker was a better antenna.
Most of them think they know more about radio than a ham thats
been on the air for 35 years. But i guess most you folks are'nt having
to deal with these types and think the rest of us are crazy. Soon
we'll all have to pay the price for most of you wanting to do away
with the code.
Thats it in a nutshell.

Duh!!!

Why does it have to be "particularly for HF/MF operations?"

Morse is Morse regrdless of frequency, you nincompoots!

Since this is their daily bread, I would dare say that DICK, Bruice,
Kelley, Steve, and Jim know about aqnd frequent this news group,
DEEEEEE

They
> are probably people who lost interest years ago

Perhaps, but they must beeeee hurd.

due to the fact that they
> were not into radio as a hobby but simply to talk to spouses and children
> around town.

They've never mentioned children, cept DICK who claims grandchildren.

As cell phones became cheap and service improved, there was no
> reason for these people to continue in the hobby. We probably also lost
> some due to lack of elmering but if they don't let us know they are out
> there, we can't find them to elmer.

No $hit, $hurlock. Ever hurd of the Novice Subbands?

You might as well call them Novices' because that's all the attention
they got.

Some of those hams never got even a 2m
> handheld let alone another radio. They never followed up by joining a club
> to get more exposure to ham radio and elmering in ham radio.
>
> Dee D. Flint, N8UZE

According to DICK and Kelly, there was more mentoring going on than
you could shake a baton at.

>73, de Hans, K0HB

Hansl:

Yup.

1. - Return U.S. Amateur Radio licensing standards to Pre-Restructuring levels, including 5, 13, and 20 WPM code testing for Novice, Gen/Adv, and Extra-class licenses.

2. Tell the entire NCTA to sod off.

3. Get the ARRL to plow every dime's worth of it's net worth into a national, televised advertising campaign. Get ham radio into the public eye, and stress the FUN, not the public service (i.e. the work and worry).

4. Get the ARRL to enlist the assistance of any and all celebrity hams in the accomplishment of #3 above.

5. Get the ARRL to stop pandering to the Welfare State mentality (related to #1 above.)

So Electrical Engineers want to posess all of Amatuer Radio?

> >I don't think that's what the FCC wants, but since the NCVEC can do

Bullshit!

And
> they could not deviate from multiple-choice format.

Bullshit!

> It's obvious that irony is not one of your strong points, Brian.

It is obvious that NCVEC reality is not one of yours.

Hmmmm. This is even more serious that we thought. If even 10% of the new codefree happen to fit this category ham radio is in for a helluva rough ride. And 10% seems to be a lowball figure, at least in many places, judging from this guy's experience.. And the code test WAS the filter for those nasties.
Ah well, Burkey Turkey thinks we don't need no stinkin' filters.
Ya gotta wonder what he thinks the FCC exams ever were. The Welcome wagon?
Oh, I forget. He isn't capable of thinking. Sorry, folks!

That's correct Burke.

Expanding a bit on the subject it's a *helluva* lot more difficult
today for a newbie interested in becoming CW-proficient today than it
was 'wayback. And that includes 5 wpm Extras like Jack. It'll become
even more difficult if/when nocodes gain access to the HF bands on a
broad scale and decide to get into CW. I don't mean "newbie" in any
derogatory sense, I mean anybody coming from any direction entering
the CW learning process. The mandated Novice bands as you put it were
almost a separate service in my mind, slow code galore, every student
booted evey other student along, unbeatable experience as a learning
exercise with fellow students. And it was all on the air too, was not
this lame computerized "imitation radio" crap newbies have to plod
thru today to get up to useful speeds.

Net result of the demise of the Novice bands as an educational
resource is CW newbies today having to flail around on their own per
the pushups Jack is going thru. Us OFs had it *much* easier in
comparison and we had a helluva lot more fun too. The concept and
implementation of the Novice license was one of the best ideas the FCC
ever had and you bet I support it.

You bet. Nice compact portable package, sets up anywhere in ten
minutes, easy to tune anywhere in the HF spectrum, etc. Short
verticals will deliver the goods rumors to the contrary. Given some
decent operating smarts and patience. A local here has worked well
over 200 countries mobiling with goofy little three foot Hamsticks.

Beats me. I've had and/or used a gazillion keyer/rig combinations and
I've never had the kind of problems he's described going back to
cathode keying days. Somethin' ain't right at KC2ELS . . .

Mine has full coverage also, but waiting weeks or longer to get any real response from the insurance company would be a nightmare.

Anyway, one pleasent note is that I've found the two guys I saw last night - they're staying right here in this building. This place rents both weekly and monthly suites. They're staying in one of the weekly suites, but had no business at this end of the parking lot (especially that late at night). The vehicles at this end of the parking lot either belong to the company, building staff, or those staying in the two executive suites (I stay in one).

Anyway, I reported all this to the police (they have the license plate number now). They're going to keep an eye on these two to see if they have anything to do with the string of vehicles thefts around here over the last few months.

>
> Just ONE!

Why?

Smith Chart use is not usually an enginnering school course. It's
something those interested are expected to learn on their own, like
how to use a calculator today, or a slide rule in years gone by.

I learned the Chart from the ARRL Antenna Book, not from EE school.

>
> Bullshit!

Yes, that's what your posts are usually full of, Brian.

Part 97 specifically lists the tests for each class of license.

Right now there are three written tests, all multiple choice. And one
code test. No Smith Chart test.
>
> > And
> > they could not deviate from multiple-choice format.
>
> Bullshit!

You really should read Part 97.
>
> > It's obvious that irony is not one of your strong points, Brian.
>
> It is obvious that NCVEC reality is not one of yours.

That's just plain wrong. NCVEC cannot add a Smith Chart test for the
reasons I listed. Read Part 97.

Besides, NCVEC complains that the code test requires too much work
from the VEs and is too stressful on those being tested. I can imagine
what they'd say if they had to supervise and grade a Smith Chart test.

And I can imagine how much you'd complain and argue if a Smith Chart
test were substituted for the code test.

Your 100% correct OM :)

Ham radio went straight into the ceramic
robin's egg blue pink toilet in the sky
ever since the ARRL Board bitched and moaned to the
FCC to publish the exam question pool way back in the
early 80's because they desperately wanted to put
Dick Bash and his Bash Study Guides out of business.

In the process they dumbed down ham radio's future
and it's become a glorified CB ever since.

Len is correct, dipole simply means two separate elements (di
means two). A dipole of a certain length will be a half
wavelength at xx frequency, a quarter wavelength at yy
frequency and a full wavelength at zz frequency and so on.

>not been renewed or upgraded to a higher class license and are beyond
>the two year grace period. That equates to a retention rate of only
>2.3%.

Somehow the numbers don't seem right, or at least I don't understand
them. For the months of February through June, 2001, when most of these
licenses should have been expiring, the AH0A web site gives these numbers:

Renewals: 7380
Expiries: 2623
Grace Period Renewals: 810
Cancelations: 645

While the 1,880 number might be right, the 1,925 number almost certainly
isn't. The above suggests that about 10,000 Technician licenses came up
for renewal in the 5 month period, or about 2,000 per month. The AH0A
data shows the service has averaged about 1,500 new Tech licenses per
month over the past few years, with the monthly new license total seldom
dropping below 1,000. As the code-free Technician license was reputed
to have more popular in its first few years of existance than later on,
it seems extremely unlikely that there were only 400 new Tech licenses
issued per month between February and July of 1991, especially when
2,000 per month ended up expiring 10 years later.

My guess would be that between 80% and 85% of those licensed as no-code
Techs in that period are still engaged enough to have renewed their license.
This isn't entirely out of line with other license classes. If you picked
a random group of Extra class amateurs (who, I assume, would tend to be older)
only 75% to 80% of them would be around 10 years later.

All are SHF/UHF antennas. Your comments below, relative to HF antennas:

> >> What would be wrong with requiring them to build a quarter wave dipole
> >> that is resonate at a specified frequency as part of the test? That
> >> is, if the test were changed to be written and performance based.

Then you build me a 1/4 wave HF dipole. Again, there is no such thing.

A dipole is 1/2wavelength total length. Center fed with 50 to 75 ohm
coaxial cable. Cut to resonance using the formula of 468/Frequency in
Megahertz.

I.E. 468 divided by 7 = 66.857 feet long.

This is the NORMAL meaning of a dipole for the Amateur Radio Service.

You can use all the other off the wall terms you choose. Above is correct
for ARS and should be on the test.

As to making it a performance test. Good idea.

I think about the worst operator back then was W2OY. The limit of his mischief was to come on top of your frequency and call cq. His call went something like "cq cq de w2oy. No lids, kids, space cadets, or school bus riders. Only class a operators on this frequency from w2oy." Whatever one may have thought of him, I never heard him swear and did manage to have a qso with him once (although he hated "wet-bottom boys", which I assumed to mean a reference to calls similar to mine - WB2OSP).

There were no folks playing "radio broadcasting" and any notice from the FCC (even minor ones) caused much consternation.

I think the biggest problem (aside from publishing Q&A manuals) is the almost total lack of enforcement from the FCC.

Certainly, it was fun back in the early 60s. If you wished to chase dx, you could. Sure, it could be frantic, but I doubt you had so many folks ignoring instructions from a dx station. If you wanted to rag chew, no problem. 160 was a most relaxed band. 75 could get really busy at night, but the air wars didn't erupt.

I don't think I can disagree with you on your take.

You have a point, Dick. I wouldn't have a problem retaining CW for the highest class; I just don't see it as *absolutely* necessary for all amateurs.

There are times I think I have a handle on how things should be; then, when I get a question concerning the length of a dipole from an extra class licensee, I begin to really wonder. My own belief (and it is personal opinion) is that all extras could not be renewed at the end of their term. To gain a new extra (and, indeed, any new extra class licensees), the person would have to be certified in emergency communications - including participation in groups. Also, for at least that highest class of license, the question pool and answers should not be published. Questions as to resonant frequency, lengths of dipoles, Ohm's law (and, come on guys, something a little tougher than a simple series or parallel circuit), and such should be randomly generated at each exam (same program made available to VEs, just that each exam would be unique). Answers should be fill in the blank and accurate to 3 places. At least that way we could ensure that at least one group of amateur operator would be helping to justify the existence of all. BTW, I am not certified and would hope to be able to become so sometime in the near future (new job and finally straight days). Once that level was achieved, the license would be renewable provided current participation/certification were to be presented. After age 65, it would be renewable with no further requirements for life.

Does posting to "rec.radio.amateur.policy" also serve as an excuse not to use ham radio to communicate?

Why does talking over the internet provoke howls of protest from hams who seem to have no problem posting text messages over the internet?

Could it be that you are feeling threatened?

Those will ship with the new Yeasucobra 2000.

It's a special package worked out between Yeasu, Cobra, Super America Truck Stops, and NCI.

They are teaming up to offer a new Super HF'er rig that fits nicely into any truck or table top. Covers the entire Ham Radio band, 11 through 160 meters.

The first 1000 units ship with a nice autographed picture of Carl, the guru of modern day Ham Radio.

I can hardly wait!

10-73 y'all!

If he relates back to my first postings on the subject, I was sarcastically speaking of an amateurs ability to kerckunk repeaters all over the world.

And it may have been in this thread that I noted listening to one guy, maybe a ham, maybe not, describing to another guy, maybe a ham, maybe not, the things he wanted to do to him, and in graphic detail, just exactly what part of this guys anatomy he found so appealing.

Seriously, I just about puked. I never heard anything like that, and don't want to ever again.

And to say that the control operator just has to "turn off the repeater, well, the horse is out of the barn by that time. Would you like your kids listening to that kind of stuff? Would it make you feel better to know that the repeater was turned off after they heard it?

And in that respect, yes, it appears that Echolink very much indeed resembles internet chat.

>1/4 wave DIPOLE.

Incorrect. The word "dipole" refers to anything with two elements and a
polarity. [a "monopole" is a single element with no polarity]

A dipole ANTENNA refers to a wire type having two elements of wires,
balanced-fed from the center with RF voltage in opposition.

The length of this dipole antenna may be ANY length, from near-infinitesimal
(fractional wavelength) to many wavelengths.

The radiation pattern of the dipole antenna will vary based on many factors:
length relative to wavelength, distance above ground or other imperfect
conductor being the two most affecting patterns.

There are currently 7 petitions for Rule Making at the FCC ECFS...RM-
10781 through RM-10787. As of 10 AM Pacific Time on 8 Sep 03, those

seven RMs had a total of 1,101 documents.

The OVERWHELMING CLEAR CONSENSUS that comes from those comments is the abolishment of the morse code test for a US amateur radio license, any class.

There all pretty good. Ya gotta respect a guy who, diagnosed with terminal lung
cancer and given 2 months to live, keeps going for over a year and releases
such tracks as a cover of Dylan's "Knockin' On Heaven's Door" and "I'll Sleep
When I'm Dead".

But my favorite is "Excitable Boy", which, besides the title track, includes
such classics as:

Werewolves of London
Nighttime in the Switching Yard
Roland the Headless Thompson Gunner

--

A great talent, gone but never forgotten.

If that works for you, great!

My point is that the driving force behind HOAs and CC&Rs and such is often a
really bad experience. Or fear of same. All it takes is one bad tenant or
property owner to start a downward trend in a neighborhood. If you ever had to
sell your place for much less than you paid for it because of what your
neighbors did, you might feel a bit different.

Some years back I lived near a street where there was one family who let their property go to heck. Paint peeling, stucco falling off, grass and weeds all over the place. The garage roof caved in. Kids running wild at all hours of the night, loud music and louder cars. Vandalism that could not be proved to be their doing. Police called on a regular basis.

That family simply didn't care, and there was not much anyone could do until they actually broke a law. Which they carefully avoided doing when the police were anywhere near.

Some folks moved away, but many could not, because their mortgages were bigger than their property values. (Their properties were devalued because of that one family).

Then, fortunately, the wild kids began to grow up. They began to realize that they could actually live like civilized human beings if they put forth a little effort. They began to keep regular hours, and to repair the house they'd spent their youth trashing. Property values promptly reached the level of similar neighborhoods in the area.

We were lucky. Many people aren't so lucky.

The idea of HOAs is threefold: First, to spell out in detail what it means to keep a property in shape. Second, to see that it gets done. Third, to keep out people who won't play by the rules.

There's a big difference between activism and violence. Groups like the
Weathermen and SDS actually worked against the counterculture movement,
ultimately killing it.
>

>Oct. 20, 1974. Guess what else we were just getting the chance to
>celebrate!?

Getting hitched? Turning 20? End of the draft?

The bit about "couldn't afford it" was no joke.

What made the hippie movement possible in the '60s was an economy that offered
lots of basic jobs which required little skill, education or experience. Almost
every business had lots of labor-intensive stuff from file clerking to pumping
gas to manually pricing every can of beans at the Acme. There was little
foreign competition, and the labor unions were so strong that almost all
working people benefited, either directly (by being in a union) or indirectly
(the nonunion shops had to keep the workers happy enough that they wouldn't
unionize). College tuitions back then were dirt cheap, particularly at state
schools. The necessities of life were very inexpensive of you didn't go in for
the fancy stuff.

All that changed in the 1970s. In many ways the '70s had more long-lasting changes than the '60s.

Most of your classic hippies were kids born during and immediately after WW2. (The kids who were in their teens and early 20s in the 1960s were born from 1940 to 1950). They were the leading edge of the baby boom, getting everything new and not having to compete as much as those who came later. The "hippest" ones were almost invariably those who had grown up in comfortable, secure surroundings. They were not worried about the future at all - they were confident that they would be taken care of.

Working class kids rarely became hippies; they were too busy working and/or going to school. They *were* worried about the future, and they had no illusions about being taken care of.

>> I went to engineering school, remember? I
>> always thought that to build a better world, one had to know how to build
>> things in the first place. So I learned how to do electrical engineering.
>> And I'm still at it.
>
>Well, we had guys who went out of High School into Physics, Liberal Arts,
>and other Sciences.

Bah!

Physics is a true science. Liberal Arts isn't. Engineering is about really doing stuff, not just talking about it. "Rocket scientists" did not put men on the moon - rocket engineers did.

"Scientists dream of doing great things. Engineers do them." - Wehrner Von Braun

> We loved for them to come home and tell us the tales of
>college life. Heh heh, my biggest kick back then was seeing Alice Cooper at
>a Hall on the campus of Plattsburgh, NY.

We had the Main Point and the Spectrum and the Electric Factory. Gene Shay on Sunday night. Warren Zevon recording at Sigma Sound. The Philadelphia Orchestra and TLA.

We also had professors of rare talent and ability.

And I had the unique experience, in 1976, of seeing parts of the world's first true electronic digital computer (ENIAC) returned to the place where they had benn built.

>hem...they wouldnt listen.

Poster provides a reason, not to elmer CBers.

> They get on the area 2 meter repeaters
>and use their cb handles and 10 codes.

Language dielect differences. Nothing wrong with that. Nothing wrong with using 10-4 codes on voice modes, except that its using unnecessary codewords.

> Most of them are extra class
>to make matters worse.

So, they passed the code test. I thought anyone that passed the code test is more respectful, better operators, and more skilled technically. Now you are saying this is not true?

>They have run all the older hams off the 2
>meter band here in wv and east ky.

If all the older hams left, then only the younger ones remained?

> But yes like a fool I welcomed
>them into my home. Went to the classes and talked about ham radio
>to them. But they are still just hardcore cbers. Its not like this
>everywhere in the country but there is enough of this scattered
>through the country to give most of us a sign of things to come.

Ham radio is a technical hobby, NOT a culture. You seem to forget that. Otherwise you would not be referring to licenced amateurs as hardcore cbers.

>No
>ham radio will not die or come to an end because of these
>types...but this is really what the code-nocode fuss is about.

Its about cbers. Really?

>There's
>thousands of us that have got a taste of these fools and dont want
>any more of them. I dont want to be in the extra portion of any band
>and hear 10-4. I dont want some idiot that just came off cb tuning

>been for the last 2 years since the code was dropped to 5wpm.

I don't want to hear dots and dashes. I'd much rather hear conversation.

>Now you can scream about elmering and
>all that...but like i said i tried...and these fools are unelmerable.

Speak normal language like most people. Its not "elmering", its teaching.

And how are you going to attract people with technical interests to the hobby? The people with EE degrees will realize, by your comparison to cbers, that hams like code and dislike technically inclined people. And one with an EE degree is likely to be insulted by what you are saying, and not want to join the hobby.

>When they looked at my full wave loop they laughed and said their
>cb antennas would work better. One looked at my 2 element 5
>band quad at 65 feet and said his moonraker was a better antenna.

I doubt that. You probably made that up. Also, you probably made up the story about how people tuning on top of you increased after the code speed was dropped.

>Soon
>we'll all have to pay the price for most of you wanting to do away
>with the code.

No faith in the individual. What are you, a communist?

> Thats it in a nutshell.

From a nut.

What a bunch of depressing malcontents in this newsgroup. I just read through this newsgroup and if someone isn't crying about the code test, someone else is crying about the written tests. Thrown into all this is endless gripes about ARRL and the FCC. Now, we have someone talking about the "golden" past like we can all just snap our fingers and go back to that supposedly perfect time.

Ham radio is, and will always be, just what you make of it, people. If you choose to focus on the worst aspects of anything, that's all you're going to see. However, I suspect there is as many good things about ham radio today, and as many good people in ham radio today, as there was during any other time period. Regardless, this today is all we have. Either make the best of it or perhaps you should find another hobby.

> radio license, any class.

Not to anyone who understands what the word "consensus" means. You obviously don't.

However, FCC does not require a consensus in order to make a decision. Nor does FCC have to enact rules that agree with the majority opinion.

Perhaps FCC will remove all code testing for amateur licenses. I would not be at all surprised if they did. Or perhaps FCC will retain some form of code testing for one or more license classes, as has been recommended by W3BE and others. One thing is clear, though: There is no "OVERWHELMING CLEAR CONSENSUS" involved.

We know you are confused, Brian.
>
>Why does it have to be "particularly for HF/MF operations?"

Because that's where Morse operation by amateurs is most common.

> seem to have no problem posting text messages over the internet?
>
> Could it be that you are feeling threatened?

Bingo! You've got it! Yes, when we post here on the Internet, it has no
effect on our on the air activities - But when some moron uses the Internet
as a substitute for radio *as a part of our on the air activities* then the
hobby is undercut and damaged. Facing this threat, amateurs feel -
threatened !

That was an astute observation you made there, Craig. It is good to see that
you understand the situation, and can point out the problem to others so
clearly.

Maybe the FCC monitors this newsgroup, sees all the senseless bashing of ego in the code vs. no code wars and will reassign all amateur frequencies to Clear Channel Communications, Inc for IBOC experiments ?

Unfortunatly I have to agree. Sure the technology has certainly improved. But the quality of the ARS has suffered.

I mean there is basically little to no experimentation going on. I'm sure there is some, such as in the digital and space endeavours, but not much elsewhere. It is a unfortunate situation that the FCC and ARRL and others has allowed the dumbing down of Ham Radio to this point. Its a real shame.

I think the 'fun' has gone away also. I like to contest, but its going away fast. It's not as much 'fun' now with all the MONSTER stations on the air.

I thought of getting back into weak signal V/Uhf work. But I hear that is about dead too.

So I turn on the thousand of bucks radio and long for the old days. Oh well.

>> seven RMs had a total of 1,101 documents.
>>
>> The OVERWHELMING CLEAR CONSENSUS that comes from those
>> comments is the abolishment of the morse code test for a US amateur
>> radio license, any class.
>
>Not to anyone who understands what the word "consensus" means. You obviously
>don't.

Webster's New World Compact School and Office Dictionary, Prentice-Hall
1989, defines "consensus" as follows:

"1 An opinion held by all or most 2 general agreement esp. in opinion."

An examination, observation, or random sampling of the six RMs that have
Comments will show that MOST of the respondents favor eliminating the
code test. MOST to an overwhelming majority.

Feel free to go into denial of the obvious. Your choice.

>However, FCC does not require a consensus in order to make a decision. Nor
>does FCC have to enact rules that agree with the majority opinion.

Not being an "insider" to the workings of the FCC as you imply, I'll just go
along with the majority opinions on RM-10781 through RM-10787 as I see
them on the public-access FCC ECFS database.

>Perhaps FCC will remove all code testing for amateur licenses. I would not be
>at all surprised if they did. Or perhaps FCC will retain some form of code
>testing for one or more license classes, as has been recommended by W3BE and
>others. One thing is clear, though: There is no "OVERWHELMING CLEAR
>CONSENSUS" involved.

Yes there is. You just can't stand it so you whine and carry on in denial.

Don't make such a scene in public with your denial whining. It spoils your
image as a long-time superior amateur radio person.

LHA

> > Name ONE school that teaches Smith Charts that is not an Engineering school.
> >
> > Just ONE!
>
> Why?

Can't you?

> Smith Chart use is not usually an enginnering school course.

Didn't say it was. Why does it have to be a course? Why can't it be
ancilliary training?

Did you use the Smith Chart while attending Engineering School?

It's
> something those interested are expected to learn on their own,

Expected by whom?

So why suggest the FCC/VEC test it?

like
> how to use a calculator today, or a slide rule in years gone by.

Or EZ-NEC?

> I learned the Chart from the ARRL Antenna Book, not from EE school.

So EE schools don't even teach it, yet you promote it in the amateur
service?

> > > btw, the plural of "Electrical Engineer" is "Electrical Engineers" not
> > > "Electrical Engineer's". "Electrical Engineer's" is the possessive
> > >
> > So Electrical Engineers want to posess all of Amatuer Radio?
> >
> Ask vshah101, that's his mantra.

The argument is much older than Vipul, and you darned well know it.

> > > >I don't think that's what the FCC wants, but since the NCVEC can do
> > > >any damned thing they want, go ahead and put it to them.

> > >
> > Bullshit!
> >
> Yes, that's what your posts are usually full of, Brian.
> >
> Part 97 specifically lists the tests for each class of license.

And what of the contents of those tests? Does the FCC mandate what
material is to be tested, or can the NCVEC slip in just about anything
they want, in any quantity they want?

> Right now there are three written tests, all multiple choice. And one
> code test. No Smith Chart test.

Then why must you promote the idea of "No Charts International?"

> > > And
> > > they could not deviate from multiple-choice format.
> > >
> > Bullshit!
> >
> You really should read Part 97.

Not a problem. You should suggest the NCVEC read it.

> > > It's obvious that irony is not one of your strong points, Brian.
> > >
> > It is obvious that NCVEC reality is not one of yours.
> >
> That's just plain wrong. NCVEC cannot add a Smith Chart test for the
> reasons I listed. Read Part 97.

They can slide it in to any existing exam. No questions asked. With
the QP loaded with Smith Chart questions, they could deny access to
any of the 3 license classes.

> Besides, NCVEC complains that the code test requires too much work
> from the VEs and is too stressful on those being tested. I can imagine
> what they'd say if they had to supervise and grade a Smith Chart test.

It would have to be multiple choice, remember???

> And I can imagine how much you'd complain and argue if a Smith Chart
> test were substituted for the code test.

How much?

The tower is over 100 feet, and a Missouri City ordinance says that the towers must be 35 feet or the owner must get a specific use permit (SUP) to build it higher. In May of 2000 Orin Snook erected a 100-foot antenna support structure at the back of his property, at 3719 Stoney Crest in Missouri City.

If a lack of Morse code skills renders one less than a fully qualified
amateur radio operator, I would think "praticularly for VHF+
operation" would have been more appropriate for the very reason you
gave.

Duh!!! again.

The denial whining is yours, Lennie. Mostly from not having been
accepted as the expert you perceive yourself as being.

The fact still remains that there is a large number of people in
and out of Amateur Radio who see Morse Code testing as important and
relevent to AMATEUR Radio...Not Military, Public Service or
Commercial...A FACT that YOU seem to have a hard time differentiating.

That difficulty stems from your gross lack of experience IN
Amateur Radio as anything other than an armchair quarterback.

>Now, we have someone talking about
>the "golden" past like we can all just snap our fingers and go back to that
>supposedly perfect time.
>
1950s & early 1960s, huh? Well, that was a time when surplus was plentiful and cheap, Generals and Conditionals had full privileges, homebrewing was a lot more common and there was reportedly a lot less nonsense on the bands. Anti-antenna CC&Rs were unknown and there was little competition from other electronic avocations.

However, there was a dark side back then:

- the new medium of television brought with it the spectre of TVI. Evn the cleanest rigs often tore up the neighbor's reception something awful, due to fundamental overload or audio rectification. Many sets back then had terrible design flaws like 21 MHz IF strips and inadequate shielding. And just try telling your irate neighbor that his new $500 marvel was not technically perfect...

- Manufactured ham equipment was big, heavy, and expensive. High powered stuff even more so. Let's not even get into the vagaries of tuning up and the damage you could do if you messed up the procedure. The prices in the old mags and catalogs look cheap until you factor inflation. Many folks homebrewed or converted surplus out of sheer necessity. $1000 would buy a nice station back then, when a $5000 annual income was solidly middle class. Figure 20% of your annual gross salary today...

- At the beginning of that "golden" time, "phone" usually meant "AM". (There was some SSB as early as 1933, and lots more after WW2, but AM was still king for a while). AM meant bands full of 6-8 kHz wide signals and heterodynes. AM was simple to implement but not inexpensive even at moderate power due to the modulation power needed. At end of that period, SSB had pretty much taken over HF 'phone. In between, a lot of nastiness had flowed back and forth over which mode was "better".

- The only data mode hams could use was 60 wpm Baudot RTTY, using mechanical teleprinters that were far too expensive for most hams to buy new. MARS and surplus were the usual sources, and once the machine was obtained you needed to build a TU and other interface gear.

- No repeaters. No personal computers. No WARC bands. No legal phone patching. No VE sessions. No true transceivers until the late '50s. No vanity calls for 99% of hams.

- There were only 100,000 US hams at the beginning of that time and 250,000 at the end.

And yet, hams had a lot of fun.

> Ham radio is, and will always be, just what you make of it, people. If you

WELL SAID!

I'll add this:

One of the great strengths of amateur radio is that it offers a very wide range of activities to a wide range of people. And one of the great weaknesses of amateur radio is that it offers a very wide range of activities to a wide range of people.

Bob:

I've been using CW as my primary mode for over 20 years, and Bruce's
spelling seems fairly normal to me. Perhaps the NCTA is on to something
after all -- we should replace the code test with a spelling test! That should
really weed out a lot of troublemakers!

Seems pretty reasonable to me. The Navy's been doing it for years on the ELF systems they use to communicate with submarines. Nothing like using a whole planet as part of your antenna system!

Bob:

Your daughter can have full amateur privileges on the VHF and higher
bands without taking a code test. All she has to do is pass a fairly
simple written test to get her Technician-class license, and she can
be happily kerchunking local repeaters and keeping in touch with you
to both your heart's content. Moreover, if she doesn't bother to whine
about not having HF phone privileges because she cannot be bothered
to learn Morse code at a dismally slow 5 WPM, nobody will any
problem with her whatsoever.

However, as a person who appreciates things like bicycles, wood
stoves, manual-gearbox automobiles, and the Morse code, I think
that the horse you bought for your daughter was a very smart
investment!

Kim:

For someone who has often characterized herself as an intelligent person,
you would appear to have a poor grasp of the meaning and usage of the
word "venue." A "venue" (n.) is a place, a locality, a location for something
to take place. Your incorrect usage of this term would tend to indicate
an inclination toward prolixity. I suggest that you eschew obfuscation
and select less egregiously irrelevant verbiage, lest you be accused
of circumlocution.

I have used a 40 meter dipole on 80 meters, with a tuner. Actually, it was for MARS nets, so it wasn't quite 80 meter ham bands...but the antenna was first a homemade dipole, then a 40 meter DXCC. Works great.

It certainly could be done using a tuner, the point is that a
dipole where each element is approximately 33 feet is a quarter
wave dipole at 80 meters. There is nothing in the books that
states a dipole HAS to be a half wavelength.

How about this for a reason, Jim? Many of the people complaining about how good it used to be have been hams for a long time. Some of the youthful enthusiasm has gone away, and now they are perhaps a little bored with it. Plus the creeping crankies start to set in, and you have a ripe field for "It ain't as good as it used to be" syndrome to set in.

Nothing is ever as good as it used to be! And never was.

I think the testing should take the "Johnny Carson Carnak"
approach, give the answer and the test taker must come up with
the correct question.

Sure enough. a dipole can be anything at all as long as it has those
two separate elements.

But do you think that is what they meant? Is the test going to ask you
to design a dipole that won't work very well?

If I saw that question on a test,(design a quarter wave dipole) I would
assume it was a trick question.

That a quarter length dipole can exist is in no doubt. Most of them are
a quarter length at some frequency. But this was a mistake, and not an
uncommon one. Its okay, people do that once in a while! 8^)

They played a cut from his new album. Good stuff, though pretty soft
edged for him. You could play it on a folk music show. Understandable
under the circumstances. It's gonna be my next buy.

The only thing I'm surprised about is that no one has mentioned my
favorite Warren Zevon song, "Lawyers, Guns, and Money".

Sure, by matching the antenna at its maximum impedance point. Even using open wire eeders this isn't a good situation, as you surely know. Mostly you'll get is a lot of arcing inside the tuner.

But LHA said...
>>>>>>> Incorrect. The word "dipole" refers to anything with two elements and

By which criteria any 1/4 wave groudnplane could qualify!

So he had to be a ham at that time to know what hams were using?
An interest in history could fit the bill here. He's only a couple
months older than me, and I also knew a lot of what he posted. And I
wasn't a Ham until 1999.

The point is, Why would anyone deliberately construct a 1/4 wave dipole?
Since they woiuldn't for obvious reasons, the fact that a dipole designed for a certain frequency just happens to be 1/4 wavelength at half that frequency doesn't automatically make it a 1/4 wave dipole. An antenna is what it was designed to be, not what some wag-troll declares.

Sure, anyone *could* construct a 1/4 wave dipole, if he was that ignorant. No one does. So there aren't any around.

I *was* all over the bands in the early/mid '50s and I'm here to tell
all you newbies what this "Golden Age" BS was actually like in
comparison to the ham radio we have today in one quick broad-brush
capsulization: If I had turn the clock back and "do" ham radio like we
had in those days my ticket would have landed in the dumpster three
decades ago.

'Twas the Medieval Age of radio, a one notch improvement beyond the
Dark Age of radio.

Heh heh...my grampaw used to be one of those folks who lived in
yesteryears--all rosey and wonderful. Yep, life sure was a lot better back
then, no highways, no good medical knowledge, etc. And, just as you Brian,
I'm sure there's many who feel just like you do. I feel that way just
thinking about it :o

Well now you've let the cat out of the bag, Dick. Somebody had convinced this Troll to use a 1/4 wave dipole, and now here you go, letting them know that they've been snookered.

They just couldn't understand why the radio kept frying its finals and they never could seem to get a good signal out, even when the radio did work.... Now they know why! - And its all your fault!

Party pooper.

And of course as it is with most things in life involving humans, conditions required you
to
learn and do, to perform, just to stay even with things.
You went beyond all that to advance, instead of accepting what you were
"given".

With no such natural requirements in place, is it any wonder that so many today lie back
and
complain instead?

Well Charlie, they probably think that an antenna tuner will solve their ignorance. Heh heh! Maybe they should read the specs on that tuner's
data sheet, then get into the books to see what they're actually attempting to match!

With a little luck they'll get a signal to actually radiate, a little sometimes, between arcs inside that tuner.

Hope it's not the internal autotuner in their high$$ rig!

Dick

A better question would be, why would someone buy one and why would
someone build one for sale?

http://www.aerocomm.com/OEM/antennas.htm

http://www.woken.com.tw/abroad/product/antenna/antenna.htm

There are probably about 15,000 more links to 1/4 wave dipoles.
Google shows over 30,000

>> Since they woiuldn't for obvious reasons, the fact that a dipole designed

Charles,

You are a troll. Have you started to patrol this
newsgroup in addition to the packet ones? When
anyone asks a question, I love your response.
The "go back to CB" posts are not welcome by anyone,
broadcaster.

I love being accused a troll by the troll when I
told you to knock it off.

Now, more people think that you are a troll. I KF'd
you only in the packet newsgroup. Have fun over here
too.

Bill

Larry,

I don't care about what you think. I am tired of trolls
like Charles that respond with hostility to newbie questions
as he often does on the packet newsgroups.

Don't you think it is time to act a little more courteous?
If you don't have anything to say then do not say anything.
Furthermore, if you do not like the amatuer service then
go online to the ULS and resign.

Are you afraid of taking the measly 5 WPM code test over
again, if you change your mind?

Do you drive a truck all day with a wireless connection
and laptop? There are so many vile and wasteful posts
by you in addition to the others. Just cool down for
awhile

Bill

I first heard WZ on a folk music show.

>
From "Excitable Boy". Also:

"When Johnny Strikes Up the Band"

WZ also wrote songs made famous by others, such as "Poor Poor Pitiful
Me", the best-known version of which was done by Linda Ronstadt.

Of course I can.

>
> > Smith Chart use is not usually an engineering school course.
>
> Didn't say it was. Why does it have to be a course? Why can't it be
> ancilliary training?

You are full of questions but short on answers.

>
> Did you use the Smith Chart while attending Engineering School?

Why is that important?
>
> > It's
> > something those interested are expected to learn on their own,
>
> Expected by whom?
>
> So why suggest the FCC/VEC test it?

Why not? Are you "Smith Chart impaired"? Do you think it would be too
much of a "burden"?
>
> like
> > how to use a calculator today, or a slide rule in years gone by.
>
> Or EZ-NEC?

I've used both EZNEC and the Smith Chart. I don't think you have.
>
> > I learned the Chart from the ARRL Antenna Book, not from EE school.
>
> So EE schools don't even teach it, yet you promote it in the amateur
> service?

Antennas and RF transmission lines are not dealt with by every EE.
Every ham that gets on the air deals with antennas.

I have no idea what argument you mean. And you darned well know it.

> they want, in any quantity they want?

You are full of questions and short of answers. Read Part 97.
>
> > Right now there are three written tests, all multiple choice. And one

Obviously, you are humor- and irony-impaired, Brian Burke.
>

You're the one with all the questions and all the time. You ask 'em.
>
> > > > It's obvious that irony is not one of your strong points, Brian.

Not the test I described.

> No questions asked.

FCC must approve every question in the pool.

> With
> the QP loaded with Smith Chart questions, they could deny access to
> any of the 3 license classes.

How? The Smith Chart is not very hard to learn.
>

>
> How much?

You demonstrate how much with every post.

And the operative definition is #2.
>

Have you tallied all of the comments into categories and computed
percentages of each category? I think not. You are simply relating
your impression of what you saw, and you are not an unbiased observer.

"Consensus" is not the same thing as "majority".
>
> Feel free to go into denial of the obvious. Your choice.

I'll leave denial, whining and complaining to you. You're much better
at it. ;-)
>
> >However, FCC does not require a consensus in order to make a decision. Nor
> >does FCC have to enact rules that agree with the majority opinion.
>
> Not being an "insider" to the workings of the FCC as you imply,

I simply report what FCC has done in the past. FCC did not follow
majority opinion on 98-143. The majority wanted at least two code test
speeds.

> I'll just go
> along with the majority opinions on RM-10781 through RM-10787 as I see
> them on the public-access FCC ECFS database.

So if the majority want to keep code testing, you will shut up and go
away? ;-)

Sounds like a promise from you.
